

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORTS AND RESOLUTIONS

OF THE

GENERAL ASSEMBLY

OF THE

State of South Carolina

REGULAR SESSION COMMENCING JANUARY 9, 1912.

VOLUME II.

PRINTED BY ORDER OF THE GENERAL ASSEMBLY.

Columbia, S. C.
GONZALES AND BRYAN, STATE PRINTERS,
1912.

LETTER OF TRANSMITTAL.

Columbia, S. C., Dec. 20, 1911.

*His Excellency, Cole L. Blease, Governor of South Carolina,
Columbia, S. C.*

Dear Sir:

I have the honor through you to submit to the General Assembly the Forty-third Annual Report of the Department of Education covering the scholastic year July 1, 1910-June 30, 1911, and containing the accounts of this office for the fiscal year January 1-December 31, 1911.

Respectfully,

J. E. SWEARINGEN,
State Superintendent of Education.

~~22194~~ *Conf*

CHAPTER I.

General Report and Recommendations.

General Report and Recommendations

Columbia, S. C., Dec. 20, 1911.

To the General Assembly.

Gentlemen: This report gives a tabular statement of conditions in every school district of the State. The facts for each county have been grouped under four main heads and are presented in four consecutive tables showing (1) Receipts, (2) Expenditures, (3) Schools, Enrollment, Average Attendance (4) Buildings, Teachers, Session.

This arrangement makes 172 county tables, from which can be secured detailed information concerning the status of every school district. These county tables are followed by eleven summaries giving totals, averages, comparisons and generalizations for the State at large.

The collection and compilation of these data have required constant and careful work for months. Their presentation in this form occupies considerable space, but it is hoped that this amplified report will serve two important ends.

HOME FACTS.

In the first place every citizen, teacher, or taxpayer can find herein a clear analysis of the educational situation in his community. "It is facts we want," for the discussion of any problem is futile unless based on an intelligent knowledge of the facts in the case. No little energy has been wasted in South Carolina in theoretic discussions growing out of misinformation concerning the free public schools and the public school system. If the same energy had been expended in a careful study of the facts some mistakes might have been avoided and better results secured.

Every school district board of trustees understands and appreciates conditions in its own territory, but few others have knowledge of or access to school records. In many instances these records are inaccurate and deficient. Even when examined they furnish only a partial insight into school conditions. It is hoped that this report may induce more frequent and careful investigation of local needs and conditions and may furnish some stimulus for further progress.

The comparative study of rural districts, towns, high schools, local taxes, expenditures, receipts, salaries, session, enrollment and average attendance, will enable the people of one district to understand what their neighbors of another district are accomplishing. The unequal distribution of wealth and the consequent disparities in school revenues can be clearly seen, both among the districts of any County and among the Counties of the State. The report contains many facts unfamiliar to the residents of the 1901 school districts of the State, but these facts have been included, because I believe them of sufficient value to be made accessible to every inquirer.

Community interest in education is the basis of all school improvement, and every patron and taxpayer should know all the facts about the community school.

1910 CENSUS.

In the second place this report will furnish much useful information supplementary to the census of 1910. The State takes no school census, and a comparison between the figures of this report and the data soon to be announced by the Federal Government will be both valuable and interesting.

School district lines are not usually coterminous with townships or municipalities, but the unit of school administration and school reports is nevertheless clear enough for intelligent statistical comparison. The classification by sexes, by residence, and by race is as full as teachers and school officers could make it. The report concerns itself only with school population, and, of course, does not indicate what part of this population failed to enroll. This is one of the great educational problems of the hour and any light that can be thrown upon it should be welcome.

RELIABLE STATISTICS.

The statistical section of the report is based on the reports of County Superintendents, County Treasurers, City and Town Superintendents in independent districts, and College Presidents. The County Superintendents' reports are in turn based partly upon first-hand knowledge of the facts and partly upon the reports of district teachers and trustees.

The data as to receipts, expenditures, teachers' examinations, teachers' certificates, school district areas, local taxation, and

school bonds are based on original records made and kept by county officers and are as full and correct as conditions will allow.

Accurate and reliable statistics are not easily obtained. In many instances such statistics are unobtainable. Every resource at the disposal of the office has been exhausted in the effort to make the statistical tables accurate and trustworthy. School officers in the main have co-operated in this endeavor, but with the system of school reports in use in the State the County Superintendent himself is often compelled to rely on estimates.

Many omissions in the report are directly traceable to the lack of prompt and adequate reports from the separate schools. Though these deficiencies are to be regretted they are not numerous or serious enough to affect materially the value and correctness of statistics and the conclusions deduced from them. Improvement can and should be made in the method of securing school statistics. School reports will not be altogether reliable until action looking to this end has been authorized by law.

ENROLLMENT.

The enrollment for the year is the largest in the history of our school system. Summary III shows the total for whites to be 160,830; for negroes 193,440, and for both races 354,270.

The Constitution provides, Section 6, Article XI, that only pupils between the ages of six and twenty-one years may be enrolled. In Section 1202 of the Code the General Assembly has defined enrollment to be ten days' school attendance during the preceding scholastic year. This enrollment forms the basis for the apportionment of all funds derived from the Constitutional tax of three mills, and is, therefore, the pivotal point of our school system.

The report shows that 23.6 per cent. of our white population and 23.1 per cent. of our negro population attended school at least ten days during the year. These percentages are remarkable. I do not believe that any considerable fraction of school population failed to enroll. The people of the State have done and are now doing more for education than for any other cause. The reports for several Counties indicate that 30 per cent. of the entire population actually received instruction in the classroom.

The most accessible schools are of necessity located in cities and towns. These schools also have long terms and offer every opportunity for the enrollment of pupils. They also attract many children from surrounding rural districts whose schools can not offer equal facilities.

With these advantages city and town schools should show the largest percentage of school population upon their rolls, but frequently this is not so. The abnormal enrollment in many districts brings increased revenues, but the gain in one district works loss in another, for the multiplication of names on the district roll can not increase the school receipts of the county as a whole.

The high percentage of negro enrollment is especially noticeable. Negro schools are seldom visited by district trustees or county superintendents, yet the negro enrollment reported by incompetent negro teachers forms the principal basis for the apportionment of school funds. If some method of checking the enrollment figures could be provided it would correct a fundamental weakness in the present law. It is desirable that every child in every district should attend school, but it is more desirable that the enrollment should not be fictitious.

AVERAGE ATTENDANCE.

The average attendance of pupils stands in marked contrast to the enrollment. This total for whites shows 107,352, for negroes 127,676, and for both races 235,028. While 23.6 per cent. of our white population had their names on the school roll only 15.8 per cent. were actually in the school room during the school term. Teachers were expending considerable effort and taxpayers much money to instruct pupils upon their school. Conditions in the State may not favor regular school attendance. The cotton crop must be hoed and picked, and the girl of twelve can frequently render as much help as a boy. These conditions, however, should not be allowed to excuse the child's acquiring the rudiments of an education. The child's parents, the school trustees, the County Treasurer, the County Superintendent, and the school districts now have adequate funds and facilities to meet their school needs. The number of such districts is rapidly increasing, and their greatest need now appears to be an increase in school attendance.

Teachers' salaries, local taxes,

SCHOOL TERM.

marked improvement is shown in the average length of the school term. This is due to the term extension act of Feb. 23, 1910, and to the marked growth of local taxation. In 1908 eight Counties reported an average school term for whites of less than twenty weeks. In 1911 this number had been reduced to seven, and in these seven the length of the term has been perceptibly increased.

This result is due to the policy of State aid to the public schools. This policy was fully discussed in two previous reports, and perhaps needs no further explanation. It is one of the effective instruments for the educational uplift of the rural districts and has received the hearty endorsement of the people. A full report of the term extension appropriation is given in Summary IX., and in my opinion the results secured amply justify a continuance of the policy.

FINANCES.

The three units of school administration in the State create three sources of school revenue: the poll tax, dog tax and all local levies voted by resident electors are district taxes.

The Constitutional tax of three mills is a County tax, collected, apportioned and expended within County bounds. The profits of County dispensaries also belong to the County in which the dispensaries are operated.

Appropriations are made from the State Treasury for libraries, high schools, built to aid term extension. But these appropriations furnish but a small per cent. of public schools receipts. The State as a whole has not undertaken the support of the public schools, but has left this support to be provided partly by the County and partly by the school district. This practice has resulted in how inequalities in school receipts and expenditures among the counties of the State and in similar inequalities among the schools of each County.

The average per capita expenditure according to enrollment for the State failed to show the average for whites was \$12.62 and for negroes, the maximum was \$34.72 for whites in Beaufort County and the minimum was \$.84 for negroes in Fairfield County.

The variation for whites ranged from \$34.72 in Beaufort County to \$5.78 in Horry County, and for negroes from \$9.33 in Charleston County to \$.84 in Fairfield County. The apportionment of the three mill tax on the basis of enrollment creates an anomalous situation in districts enrolling a small number of white and a large number of negro pupils. This apportionment is made without regard to race lines, the total number of children forming the basis of the allotment of funds, but when once apportioned and made subject to the order of the district trustees, these school funds are expended on a different basis. The sea islands of Charleston and the black belt of lower Richland County forcibly illustrate this condition. These school districts have a plethora of money, although their white schools are among the best in the State and the trustees do their utmost to get rid of every dollar. The patrons do not need to vote local taxes, because their regular funds are more than ample.

At the same time sparsely settled districts in these Counties can barely support their schools. This condition is due to the rigid requirements of the law governing the apportionment of school funds. If the County Superintendent and County Board of Education could be given greater discretion in this respect, these inequalities and disparities could in part be removed.

EQUALIZATION FUND.

The Association of County Superintendents has given careful thought to this question. In some Counties the necessities of the case have forced school officers to exercise this discretion in their efforts to improve the schools, although such action was illegal.

This condition might be easily remedied with great advantage to the schools. I know of no better way than that recommended in the resolution unanimously adopted by the Conference of County Superintendents held July 8-11: "Whereas, the manner of the expenditure of money raised for school purposes through the regular channels is rigidly prescribed by law, and whereas, the experience of every County Superintendent shows the imperative need for some discretion on the part of the County Boards of Education in the expenditure of school money, be it resolved, That it is the sense of the Association of County Superintendents that an equalization fund of not less than

\$5,000.00 should be placed at the disposal of the County Board of Education of each County to be expended by them in such manner as they may think best to strengthen the schools of weak districts and to promote the educational interests of the County.

"In consequence of the wide variation in the school funds of the forty-three Counties of the State, the Association respectfully recommends to the General Assembly an appropriation of this amount, or such part thereof as may be necessary, to each County from the State Treasury, and to continue the same annually in such amount as in its wisdom may be necessary.

"All expenditures of the said equalization fund shall be made on proper vouchers, and at such time and in such manner as the County Board of Education may determine."

STATE DISPENSARY BALANCE.

There is now in the hands of the State Treasurer an approximate balance of \$250,000.00 derived from the State dispensary. In 1910 \$40,238.64 from this fund was expended to lengthen the school term and \$20,000.00 in the erection of adequate school buildings. In 1911 \$42,501.12 was again expended to lengthen the school term, \$20,000.00 for the erection of school buildings, and \$60,000.00 was appropriated for high schools. Of the high school appropriation \$26,159.00 was paid out December 9, and the remainder will be distributed in the spring of 1912.

These five special appropriations during the last two years were paid from funds already belonging to the schools. The consequent decrease in the tax levy was insignificant. The continuance of this policy will soon dissipate the dispensary balance and when this balance is once exhausted State appropriations to the public schools must come from the State Treasury or be discontinued.

Some Counties do not apparently need State funds, because their revenues have already been largely supplemented by local taxation. In Bamberg, Clarendon, Dillon, Florence, Lancaster, Oconee and Pickens, the receipts from local levies already exceed the receipts from any other source; and, in nearly every County, school district boards are making good use of this privilege.

In some Counties economy in school expenditures has put every district on a cash basis, while in others the school finances

are in a deplorable condition. Beaufort, Colleton, Darlington and Dorchester Counties closed the year on June 30 with a deficit. Barnwell, Dillon, Dorchester, Greenwood, Hampton, Laurens, Marion, Saluda, Sumter and Williamsburg Counties borrowed money for school purposes and guaranteed payment by giving a lien on the school taxes to be collected later. Several of the Counties also borrowed money, but these facts were not included in the report of the County Superintendent.

In addition 303 school districts ended the year in debt, although the contraction of debt by school district boards is a plain violation of Section 1228 of the Code.

The distribution of the dispensary balance at this time would help to relieve this situation. The money might be apportioned among the forty-three Counties according to the enrollment of the scholastic year 1910-11 as reported by the State Superintendent of Education, and although this method of apportionment is open to grave objection, it is in accordance with the precedent of former years when State dispensary funds were available for school purposes.

If this distribution is authorized the amount apportioned to each County could be set aside as a County Board fund to be expended in the discretion of the board in accordance with its best judgment. Such a course would help to relieve existing embarrassment in many districts as well as to supply a County equalization fund.

SCHOOL AUDITOR.

The comparison of financial statistics as submitted by this office during any three consecutive years will indicate clearly the need of a uniform method of school bookkeeping and school accounting. The Department is at present unable to undertake this work, for its proper performance will require the full time of an expert accountant.

The work might be done in connection with the Comptroller General's office or with this office, but I know of no expenditure of an equal amount that would yield a quicker or fuller return.

Summary X. shows that 115 districts have issued school bonds aggregating \$1,316,937.48. This summary is incomplete, because these facts were not reported fully for some Counties and were omitted altogether for others. Besides, many townships and

municipalities have issued bonds and used the proceeds for educational purposes.

The act of February 19, 1907, makes no adequate provision for the registration of school bonds and for full reports of sinking funds collected for their retirement. In some instances these sinking funds have been dissipated. It will be little short of a calamity if the lax enforcement of the bond act is permitted to impair the serviceableness of this great instrument of school improvement. It is an imperative necessity that these districts and these funds should be protected, but this can not be done under existing conditions.

COUNTY SUPERINTENDENT'S LEDGER.

In compliance with the law, the State Superintendent of Education published and distributed this year a County Superintendent's ledger, showing receipts and expenditures by school districts. Every means was employed to make the ledger clear, comprehensive, usable and satisfactory. Helpful suggestions were received from County Superintendents, County Treasurers, County Auditors, expert accountants and schoolmen, thus making the ledger include the practice and experience of the various officers charged with the collection or disbursement of school funds and the administration of school affairs.

Each County has heretofore employed its own system of school bookkeeping. Tax-payers, trustees and patrons frequently had difficulty in learning the exact status of their district. A change in County Superintendents often left the office barren of records, and though entering upon new duties in the middle of the scholastic year, a new administration was sometimes handicapped not only by unfamiliarity with conditions but by the absolute lack of the data that ought to be easily accessible in the books of the office.

The introduction of the ledger has given general satisfaction to school officers. Its use will do more to systematize and clarify school finances than can any other agency at the command of the State Department of Education.

The ledger can be easily kept and whenever properly kept the making of the financial report for the County will be an easy task. The average cost per County was \$7.00, whereas similar books ordered separately usually cost about four times that

amount. If the State Superintendent could distribute the ledger in duplicate a copy might be placed in the hands of the County Treasurer as well as the County Superintendent of Education.

SCHOOL BUILDINGS.

During the year 82 new buildings were erected by means of the State and County school building acts. In every instance blue prints were submitted for inspection and approval, and the houses have been constructed in accordance with the principles of the best school architecture.

A large majority of these new buildings are located in the country. Many of them would never have been erected without special State and County aid. In several instances they represent actual sacrifice on the part of the community, for in some of the districts the people were determined to make the children's house the best in the neighborhood.

Renewed acknowledgment is gratefully made to the Mechanical Department of Clemson College for its assistance in supplying information and blue prints to boards of trustees. The co-operation of the college has not only enabled school officers to save hundreds of dollars, but it has aided in bringing to these communities better school facilities, invariably resulting in a long chain of improvements.

This fund has secured more satisfactory results than any appropriation entrusted to this Department. To discuss at length the desirability of adequate school houses would be futile, because these advantages are already well known to every intelligent and progressive citizen. The work stands for itself. I hope the report of disbursements printed as Summary IX. of this report will be closely and carefully scrutinized.

DEFICIENCY IN BUILDING APPROPRIATION.

The building appropriation for the fiscal year 1911 was \$20,000.00. Though this fund was paid out in amounts of \$350.00 or less, the appropriation was exhausted August 24. Applications received after that date could not be paid, and there are now on file in the office some forty requests for State building aid.

During the year a number of rural districts have voted bonds in amounts ranging from \$800.00 to \$2,500.00. In addition to the regular school taxes these districts now pay additional local

levies for ordinary purposes and for bonds. The buildings are not yet finished or furnished, and the patrons are looking to the law-makers to see that their efforts are not discouraged.

It was a source of genuine regret that the Department was unable to approve and pay these applications promptly upon their receipt. These communities deserve the help of the State in their efforts to help themselves. An appropriation of \$10,000.00 is needed to cover the deficiency for the current year. This does not mean that any liability has been incurred by the State Department of Education, but school district boards applying for building aid from all quarters of the State have been informed that the deficiency exists and that their application could not be honored because of the lack of funds. In my opinion it is eminently desirable both to pay the building deficiency for 1911 and to increase to \$30,000.00 the building appropriation for 1912.

CONSOLIDATION.

The one-room, one-teacher school is still the predominant type among us. Of the 2,672 white schools in the State 1,985 employ one teacher, 392 two teachers and 295 three or more teachers.

There are 1,901 school districts. The report shows that 1,472 districts contain one white school, 255 districts two white schools, 69 districts three white schools, and 88 districts more than three.

These figures are not without significance. The framers of the Constitution of 1895 evidently intended that the State should be divided into convenient school districts, each containing one white and one negro school. The minimum constitutional area of nine square miles will not admit of an indefinite multiplication of districts; in fact, County school district surveys have been seldom made, and school district lines have rarely been definitely laid out.

Patrons desiring a new school not infrequently begin by securing a new school district. This practice has been carried to so great an extent in some Counties that many existing districts do not contain nine square miles. This tendency to increase the number of schools and of school districts is to be regretted.

Not a few of these little schools have consolidated as a result of the school building act. Their next need is an increased and improved teaching force, and this can not be provided without additional support.

Some of these districts have voted the maximum local levy of eight mills and still find it necessary to supplement school funds from private subscription. Under these circumstances additions to the teaching force are impossible. If County Boards of Education could be given greater discretion in the apportionment of school funds, this condition might be remedied. If an Equalization Fund could be provided in each County the situation would be in part corrected.

But if consolidation is to be encouraged and sure and quick returns are to be secured it is highly desirable for a direct State appropriation to be made for this specific purpose. No district should be granted aid until it levies the maximum local tax of eight mills. The enrollment of pupils should be at least sixty, with an average attendance of not less than 40. Two teachers should be required, and the State aid might cover any salary deficiency arising during a term of eight months. If a stimulus of this kind could be offered to rural communities desiring better schools, it would immediately result in noticeable improvements.

HIGH SCHOOLS.

The report of the High School Inspector shows significant progress in the high schools of the State. The work accomplished in these schools is perhaps better than ever before. The enrollment and teaching force are larger, the courses of study are fuller, and the community interest is deeper.

The report, however, shows that the high school act should be amended in three particulars. (1) As to its enrollment requirements. (2) As to the population limit in villages and towns. (3) As to the maximum amount of State aid to be granted in any one County.

Few rural communities can supply fifteen high school pupils. This provision of the law practically confines State high schools to the smaller towns.

It is often difficult for a village containing but few more than four hundred inhabitants to enroll twenty-five pupils above the seventh grade. This provision of the act works a hardship on the people of these localities. In many instances the full census returns will show that these small towns have in reality a limited white population and that a majority of the inhabitants are negroes. To supply the enrollment of twenty-five high school

pupils under these conditions is often difficult and frequently impossible.

Towns of more than twenty-five hundred inhabitants are excluded from the benefits of the high school act. This provision of the law has caused the withdrawal of State aid from eight high schools, and has prevented more than a score of towns from becoming a part of the State high school system. The school exists for the children, and it is a short-sighted policy that deprives a populous community of State high school advantages.

The law provides further that no County shall receive more than \$3,000.00 a year. This limitation applies equally to large and populous Counties as well as to those that are small and sparsely settled. The unequal distribution of white population among the forty-three Counties and their wide differences in area clearly indicate the difficulties to be encountered in the practical enforcement of the law. These various and varying conditions can not be adequately met by this arbitrary financial limit.

TEACHER TRAINING IN HIGH SCHOOLS.

The time has come when the high school can be used not only for the benefit of the community in the training of pupils, but also in the training of teachers. Though special privileges are granted college graduates under our laws governing certification, the bald fact remains that only a fraction of our teachers hold college diplomas. If all the graduates of all our colleges should enter the classroom it would take ten years without the loss of a single recruit to make up the present teaching corps of the State.

Teaching is a shifting profession. Only a fraction of those undertaking it make it their life work. Thoroughly prepared teachers are inevitably attracted to long-term, high-salaried schools, leaving the more difficult task of the ordinary country school to untrained and unskilled hands. The establishment of a teacher-training course in ten four-year high schools in ten Counties would place the advantages of normal training within reach of many prospective teachers. At the same time it would furnish a means of improvement to many now at work in the classroom with inadequate preparation and unable to secure more thorough equipment. An appropriation of \$1,000.00 to

pay the salary of a special training teacher in such a high school would immediately yield valuable returns.

RURAL SCHOOL SUPERVISION.

With the invaluable assistance of the State Supervisor of Elementary Rural Schools, the Department has been able to devote more time, study, and attention to the rural school problem than it was ever before in position to undertake. The hearty co-operation of the County Superintendents has afforded abundant opportunity for this work, which was begun July 1, 1910. Special attention is asked for the excellent report of the State Supervisor, for the needs and suggestions set forth by him are vital to the welfare of our school system. The supervision of district and County schools should be left neither to the State Department of Education nor to the State colleges. Though the work can be properly done only by those equipped to undertake it, its failure is inevitable, unless the workers understand local needs, sympathize with local aspirations, co-operate with district and County school authorities and are able to secure community co-operation.

County Supervisors of normal methods have been appointed in York and Dorchester. It would be a great step forward if such a Supervisor could be placed in the field in co-operation with every County Superintendent. The workers are available, and I sincerely hope adequate provision can be made for undertaking and supporting the work.

ADOPTION OF TEXT-BOOKS.

On August 31 the contract between the State Board of Education and the twenty-one publishers supplying text-books to the free public schools expired. It became, therefore, the duty of the Board to make a new adoption as authorized and directed in Section 1184 of the Code, which provides in part that "The State Board of Education shall have power to prescribe and to enforce, as far as practicable, the use of a uniform series of text-books in the free public schools of the State; to enter into an agreement with the publishers of the books prescribed, fixing the time of prescription and the price above which the books shall not be retailed during the period of prescription, and a rate of discount at not less than which the books shall be fur-

nished to the retail dealers in this State; to require the publishers, in the discretion of the Board, to establish in each County one or more depositories of their books within the State, at such place or places as the Board may designate, and where such books may be obtained without delay; and to exact of the publishers a bond in the sum of not more than five thousand dollars conditioned for the faithful performance of the agreement, and with a penalty of twenty-five dollars for each violation of the agreement, the form and execution of the bond to be approved by the Attorney General of the State, which agreement and bond shall be deposited with the State Treasurer, all recoveries thereon to go into the State Treasury for school purposes: *Provided*, That the State Board of Education shall not have power, without permission of the General Assembly of the State, to change a text-book within five years from the date of its adoption, except for violation of the agreement entered into by its publisher with the State Board of Education, for which cause it may be changed by the said Board; and it shall be unlawful for any teacher drawing public school money to use any book not prescribed by the State Board of Education without the consent, in writing, of said Board."

The approaching adoption was informally discussed at a meeting of the Board Aug. 23, 1910. A committee was appointed to prepare an announcement to all whom it might concern, and this announcement was mailed by the Secretary on Nov. 8 to one hundred and seventy-eight writers and publishers of text-books.

At a meeting of the Board April 7, 1911, a formal notice was drafted fixing the conditions, time and place of the adoption and calling for bids. This notice was advertised in the daily papers of April 11, and a pamphlet containing said notice, a copy of the preliminary contract, and a blank form for sealed bids was at once distributed to the same list of writers and publishers of school text-books and to all inquirers.

Official copies of the proposed contract and blanks for sealed bids were promptly furnished to all applicants. Bids were to be sealed and to be opened only in the presence of the Board at the meeting appointed for June 17. The State Superintendent of Education, as *ex-officio* Secretary of the Board, was authorized and directed to give the widest publicity to the adoption, to conduct all necessary correspondence incident thereto, and to receive any and all sealed bids.

When the Board met June 17 it was found that thirty-seven bids had been filed. Each of these was opened and read in the presence of the full Board, and the Secretary was requested to tabulate books and prices for the convenience of the members.

CONDITIONAL BIDS.

Upon examination it was found that seventeen publishers had submitted conditional bids. These publishers objected to the exchange provisions of Section VI. of the proposed text-book contract, under which old books in the hands of pupils were to be exchanged for the new books on the same subject to be introduced.

The Board granted a careful and exhaustive hearing to these bidders on the morning of June 19. The representatives of all publishers submitting conditional bids were asked to explain fully the nature and scope of their objections and each of these statements was recorded stenographically.

At the conclusion of the hearing the Board decided to amend its contract. Accordingly, minor amendments were adopted to Sections II., V., and important amendments to Section VI. These amendments were read to the assembled bidders June 20. The Chairman announced that all bids had been rejected and that new bids had been called for under the amended contract.

Without exception each of the thirty-seven original bidders renewed his bid, again placing before the Board every publication originally offered for adoption.

After two days' work the adoption was practically concluded, and on the afternoon of June 22 a recess was taken till July 13.

Notice was given that further bids were desired on General Histories and Latin Grammars, all such bids to be subject to the same conditions governing those filed on or before June 16 and on June 20.

The deferred adoptions were promptly made July 13, but at this meeting the Board found that the publishers of the No. 3, No. 4 and No. 5 books of the series of basal readers were unwilling to sign and deliver their contract. This refusal they based upon continued objections to its exchange terms and though urged to sign their contract and leave to the courts the settlement of differences growing out of its interpretation, they refused to do so. All efforts to secure agreement and induce signature

having failed, the Board took a second recess till July 21. At that date only forty-one days remained before the expiration of existing text-book contract, and no more time could be lost in fruitless dickering. The schools were soon to open. Books had to be secured. Further delay would have worked serious hardship and detriment to pupils and patrons. Hence the Board resolved to reconsider the tentative adoption of the No. 3, No. 4 and No. 5 books of the basal series of readers and in lieu thereof adopted Heart of Oak books, No. 3, No. 4 and No. 5.

After the text-book contract had gone into effect Sept. 1 and many schools had opened, this controversy was taken into court on petition of the B. F. Johnson Publishing Company for an injunction forbidding the sale and use of the Heart of Oak Readers. The merits of the case were fully presented, but the injunction was promptly refused. An appeal was taken to the Supreme Court and the matter is now pending before that body.

TEXT-BOOK CONTRACT.

The 1911 text-book contract is, in my opinion, the most advantageous ever entered into in this State or in any of the twenty-three States prescribing a uniform series of text-books for use in the public schools. Any old book in use under State adoption contract from 1906-1911 or in special districts exercising the right of independent text-book adoption may be exchanged for any new book on the same subject. The common exchange heretofore has been between books "of similar grade on the same subject," but this promotional exchange allows the purchaser to give a book of lower grade in part payment for a book of higher grade. Since pupils rarely study two books of the same grade on the same subject except readers, State text-book contracts have heretofore resulted in the exchange of less than 10 per cent. of the old books in the hands of pupils. The exchange allowance is commonly 50 per cent. of the retail price of the book, hence the real saving to purchasers was barely 5 per cent. Promotional exchange should increase the number of old books returned to dealers and to that extent should relieve the burden and expense of the new adoption.

Books adopted in 1906 and readopted in 1911 are also exchangeable. This provision also operates to the advantage of the

purchaser by giving an exchange value to old books otherwise worthless.

The exchange period also extends from Sept. 1, 1911, to Dec. 15, 1912, three months longer than usual. Thus ample time was allowed pupils to finish books already in hand and later exchange them for new texts.

With the right of promotional exchange, the right to exchange readopted books, and the extension of the exchange period to fifteen months, in addition to the usual low prices secured in State text-book contracts, the adoption might reasonably have resulted in the changing of 25 or 30 per cent. of the books already in use. These moderate changes would have imposed a minimum of cost and would have occasioned the minimum of confusion in the schools.

SWEEPING CHANGES.

The Board, however, made sweeping and wholesale changes. A comparison of the lists of 1906 and 1911 together with a study of the report of the central text-book depository, printed in Chapter II. of this report, will show in part the number and cost of books thrown out of the schools.

These figures do not take into account books ordered directly from publishers, books used in independent districts or books purchased prior to 1906, at which time many books introduced in 1901 were readopted. But these data show beyond question that the property rights involved amounted to several hundred thousands of dollars.

The progress of knowledge, science, pedagogy and text-book manufacture within five years is never enough to justify so many changes. Books are tools of the teacher and aids to the child; but what of the workman who finds it necessary to buy an entirely new set of tools at one time?

TEXT-BOOKS IN SPECIAL DISTRICTS.

There are in the State between seventy-five and one hundred special school districts created by act of the General Assembly and exercising legally the right of independent text-book adoption. The majority of these districts contain cities and towns, but a few are altogether rural.

The privileges of these special districts are protected by Section 5, Article XI., of the Constitution, though their extension

to other districts is prohibited by subdivisions IV. and V., Section 34, Article III., of the same document. In these special districts school authorities select and change books at will. No two of them use the same texts or the same course of study, and patrons moving from one city or town to another are almost invariably called on to buy new books with each removal.

The city superintendents are the best trained and best paid educators of the State. They represent nearly 40 per cent. of the white children enrolled in the public schools. They do not use the books adopted by the State Board of Education and required in rural districts, in small villages and in some large towns. They have had forty years to agree among themselves, but this agreement is far from realization to-day.

I do not believe that conditions in the State are so different in adjoining Counties as to require the use of a different series of text-books in the schools of their court house towns. I do not believe that children in the Piedmont are so unlike children in the Pee Dee that they can not be taught from the same books. If school authorities in independent districts can not employ the books required in the other schools of the State they should at least be able to agree among themselves on the best texts for city and town schools. Such an agreement would increase the efficiency of the schools and would effect a considerable saving to our industrial classes, for these are the folk whose work compels them to move frequently. The existing wide-spread diversity offers a fertile field to publishers and furnishes a golden harvest to book agents, who annually come to reap it.

Moreover, such a voluntary agreement among the independent districts would prove of incalculable assistance to the State Board of Education in prescribing a uniform series of text-books for the 1,800 school districts of the State created and operated under the general school law. If teachers and superintendents in these districts can not come together by consent, the law should step in to protect the taxpayers and patrons.

STATE TEXT-BOOK BOARD.

The present text-book contract expires June 30, 1917. Under this contract one company secured upwards of 50 per cent. of the text-book business of the State. Such preponderance is neither

wholesome nor desirable. Its recurrence or continuance should be made impossible.

The Board charged with the adoption of text-books should be made directly responsible to the people instead of to the executive. This Board should be composed of public school men and should adopt books for all the schools of the State. A uniform series of books should be adopted for city and town schools as well as the rural districts, but if voluntary agreement can be secured among independent districts the substitution of this agreement for the State adoption should be everywhere allowable in long-term schools—the sole limitation being that where once adopted it could not be changed within six years.

The State text-book list should be so classified and subdivided that not more than one-third of the books in use could be changed at one time. This could be readily accomplished if the term of each adoption ran for six years and if only one-third of the books on the list could be considered every second year. No more vital question than this will claim your attention as lawmakers.

TEXT-BOOK DEPOSITORY.

Upon the completion of the adoption, the twenty companies awarded contracts selected and recommended to the Board the R. L. Bryan Company of Columbia as Manager of the Central Text-Book Depository. This recommendation was approved and the bond of this company for \$5,000.00, guaranteeing the filling of cash orders within three days, is on file with the State Treasurer.

Local depositories have been established in 144 communities and the heavy demand for new books has been met as well as circumstances will allow.

To permit the opening of the schools early in September and to facilitate their work during the first part of the session, the State Superintendent of Education recommended that pupils be allowed to finish any old texts already in hand. After completion, these books may be exchanged for the new adoption. Through the office of the State Superintendent the Board addressed the following letter to all teachers, principals and superintendents:

"Oct. 3, 1911.

"To the Manager of Any Local Text-Book Depository.

"Dear Sir: Under the text-book contract of the South Carolina State Board of Education with the twenty publishers whose books have been adopted for use in the schools of the State, liberal exchange terms have been granted to all purchasers. Any old books in use from 1906 to 1911 are exchangeable for any new books to be used under the recent State adoption.

"Any old book that can be recognized is exchangeable. The condition of the backs or the leaves, and the number of missing leaves, should not be taken into consideration. The only requirement is that the old book shall be on the same subject as the new book introduced.

"All exchange prices are printed or pasted on the inside of the front cover of the new texts. Purchasers and dealers may secure full and clear information by reference to these official labels. Promotional exchange does not require that the new book shall be of the same grade as the old book presented by the purchaser. This point is clearly covered by Section 6 of the State Text-Book Contract.

"The Central Text-Book Depository should fill all cash orders within three days after their receipt. If any delay in the delivery of books occurs, please report promptly to the State Superintendent of Education the date and the nature of the order and the books omitted in the shipment from Columbia. A copy of the order itself, marked so as to show the books ordered but not received, would be more satisfactory.

"Any overcharge should be promptly reported to the State Superintendent of Education.

"There has been a heavy demand for the new adoptions, and this demand will probably increase during the next two months. Your co-operation in supplying the needs of the schools will be appreciated by the Board and will render a service to your community.

Respectfully,

(Signed) "J. E. SWEARINGEN,

"State Supt. of Education and Secretary State Board.

"(Sent out by direction of the State Board.)"

SCHOOL MANUALS.

A bulletin of the new course of study was issued August 12, and was also included in the teacher's register for the current year. To make this course more effective, the office also issued a teacher's manual for the elementary schools prepared by W. K. Tate, State Supervisor of Rural Schools, and a high school manual for teachers prepared by William H. Hand, State High School Inspector.

The reprint of these two manuals would require one hundred and fifty-four and one hundred and two pages, respectively. The statistical tables of this report occupy so much space that this reprint was deemed inadvisable.

Both manuals, however, have been widely distributed and copies can be had upon application. Commenting on them a distinguished educator in another State writes: "We are grateful for the twenty copies of the South Carolina Manual. This work is high water mark. In its plan, in the fullness, and especially in the suggestiveness of the material, I have not seen any similar manual that can approach this. The schools of the State are to be congratulated upon having such inspiring guidance as is embodied in this manual."

Numerous requests for the manuals have come from a distance. The Superintendent of Education of Vermont was furnished a copy and at once wrote: "A copy of the teachers' manual for the elementary schools of South Carolina is at hand and I have examined the same with considerable interest. Should it be convenient for you to do so, wish that you might send me at my expense twelve copies of same for distribution among our Teacher Training Courses."

Quotations might be multiplied, but one more will suffice. The opinion of a leading city superintendent in an independent district shows the reception given these publications by home teachers and the local estimate of their value to our schools: "I regard each of these manuals as a most splendid piece of work. They bring suggestion to every teacher right at the point where suggestion is most needed. It is my opinion that the placing of these manuals in the hands of the teachers of the State will accomplish more for the children of the State than any other service of the Department of Education in recent years. I feel that the greatest weakness in our educational effort is

the weakness in the teaching force, and these manuals serve to strengthen at the weakest point."

SCHOLARSHIPS.

The scholarship act of 1911 greatly simplified and strengthened the system of free scholarships in the four State colleges. Two provisions of this statute have been vigorously attacked.

The law forbids the award of scholarships to competitors who have ever attended a college or university whenever other eligible applicants who have never attended an institution of higher learning enter the contest and make the passing grade. Several State colleges and almost all the denominational colleges maintain preparatory classes. In State institutions these preparatory students receive all the benefits and enjoy all the privileges of their associates with the single exception of class rank.

The necessary high school training to enter college can be secured in every County of the State. Cheap board and free tuition attract students to State institutions. If these colleges can not secure free scholarship students without drawing them from their preparatory classes, these preparatory classes should be discontinued at once.

I have interpreted the statute to mean that a matriculate of any institution whose name appears in its catalogue is a *bona fide* student. If the State is to maintain costly high school classes under the guise of preparatory departments in State colleges, the fact should be set upon a hill and not hid under a bushel.

At Winthrop, dining room and service scholarships are given to a number of earnest and admirable young women seeking a collegiate education. Heretofore many of these students have returned home and won the State scholarships from their Counties. It is a hardship to refuse them the award on the ground that they have already attended college and are debarred under the law. With this amendment the scholarship act should operate to the advantage of State colleges by inviting competent applicants. It should also help to build up the free public schools by reserving scholarship benefits to pupils unable to leave home in search of college advantages.

The construction of the law is now before the Supreme Court. If it is the intention of the General Assembly to permit college

preparatory students to win and enjoy free scholarships, this intention should be clearly stated in the law, and the act of 1911 should be made plain in this respect.

CONCLUSION.

Many other matters might be discussed if the size of this report permitted further comment. Any student of school conditions in South Carolina will find helpful facts in this report. Further analysis and discussion are left to the interest and initiative of the investigator.

Special acknowledgments are due my assistant, with whose help this report has been prepared.

I am grateful for the sentiment which makes education the first duty of the State. The free public school is the truest safeguard of the commonwealth. The progress of recent years has been directed by the patriotism, liberality and wisdom of the lawmakers, and I feel certain that the continuance of this constructive policy is assured.

Respectfully submitted,

J. E. SWEARINGEN,
State Superintendent of Education.

CHAPTER II.

Documents Relating to Text-Book Adoption.

**Documents Relating to the Adoption of Text-Books for
Use in the Free Public Schools From
Sept. 1, 1911, to June 30, 1917.**

Nov. 8, 1910.

To Writers and Publishers of School Text-Books.

Gentlemen: The present adoption of text-books for use in the free public schools of South Carolina will expire Aug. 31, 1911. The State Board of Education is preparing to consider another adoption for the five-year period 1911-16.

Elementary, Grammar School and High School texts will be considered. Any writer or publisher of text-books may present the merits of his work to the several members of the Board, by letter, through an agent, or in person.

It is the purpose of the Board to secure the best text-books now on the market. The high school adoption will cover the eighth, ninth, tenth and eleventh grades. The Elementary and Grammar School adoption will embrace the first seven grades. The adoption will be made at the summer meeting of the Board on or about June 20.

Respectfully,

J. E. SWEARINGEN,

State Supt. of Education and Secretary State Board.

**FORMAL NOTICE TO WRITERS AND PUBLISHERS OF
TEXT-BOOKS.**

To Whom It May Concern:

The State Board of Education of South Carolina hereby gives notice that it will meet in the city of Columbia, at 10 a. m., Saturday, June 17, for the adoption of a uniform series of text-books to be used in all the free public schools of this State, for which the said Board may lawfully prescribe and adopt text-books. The use of the books to be adopted shall begin September 1, 1911, and shall continue until June 30, 1917.

The State Board of Education will receive, through its Secretary, the State Superintendent of Education, sealed bids to be opened only at a meeting of the Board in regular session,

and to be submitted on or before June 16. Each bid shall be accompanied with a certified check or surety bond in some bonding company authorized and licensed to do business in the State of South Carolina, in the amount of \$200.00 for each book on which a bid is submitted, and not to exceed in the aggregate \$1,000.00 from any one publisher or firm; said check shall be deposited with the State Treasurer to be held by him until the adoption has been completed and announced. In the event that any publisher, firm, or company submitting a bid neglects, refuses, or omits to execute its contract within fifteen days after the acceptance of the bid submitted to the State Board of Education, this check or bond shall be forfeited to the State of South Carolina; any recovery to be paid into the State treasury for the benefit of the permanent school fund.

The Secretary of the State Board of Education shall, upon the conclusion of the adoption, inform the State Treasurer of the acceptance of any bid and the execution of the contract between the State Board of Education and such bidder. It shall thereupon become the duty of the successful bidder to file with the State Treasurer the bond required in the text-book contract, said bond to be approved by the Attorney General of South Carolina.

The Secretary of the State Board of Education shall also at the same time inform the State Treasurer of the unsuccessful bidders, whereupon the said State Treasurer shall return all certified checks or bonds from such parties. Each bid shall be made on the printed form prepared by the State Board of Education of South Carolina and sent out by its Secretary, and shall be accompanied by the affidavit therein contained. The truth of this affidavit is hereby declared to be a part of any contract that may result from any bid. The falsity of such affidavit in any respect shall at any time render such bid or contract null and void. The Board retains the right to accept or reject any and all bids or any and all parts thereof.

Every bidder is expected to supply nine copies of the book or books offered, one copy to be delivered to each member of the State Board of Education at his home address at any time on or before June 1. No agent or publisher shall appear before the Board in session except upon the invitation of the Board, and no sample shall be offered to any member, either in Columbia or at his home, at any time subsequent to June 1. The sup-

plements to be printed in connection with the South Carolina editions may be considered at the pleasure of the Board.

Columbia, S. C., April 11, 1911.

STATE OF SOUTH CAROLINA, }
County of Richland. }

CONTRACT.

Whereas, On the eighth day of November, 1910, the State Board of Education of the State of South Carolina gave formal notice to writers and publishers of school text-books that its members would consider samples submitted for examination in connection with the approaching text-book adoption to be made by the said Board; and

Whereas, further, On the eleventh day of April, 1911, the said State Board of Education advertised for sealed bids on text-books to be filed with the State Superintendent of Education, as Secretary thereof, on or before June 16, 1911, said bids to be opened only in the presence of the Board in regular session; and

Whereas, The State Board of Education of the State of South Carolina have agreed with certain parties submitting such samples and such sealed bids on school text-books;

Now, therefore, this agreement made and entered into this first day of September, 1911, between the State Board of Education of the State of South Carolina, party of the first part, and party of the second part, witnesseth:

I. That the party of the second part will establish and maintain at every courthouse in the State one depository or agency for the sale of school text-books to the patrons and pupils of the free public schools of this State at the price or prices herein stipulated, from September 1, 1911, to June 30, 1917, and one or more such depositories or agencies at convenient points in each County as may be determined and directed at any time by the State Board of Education; the location and manager of such depositories to be subject to the supervision and approval of the said State Board. Nothing herein contained shall be construed to prevent the County Superintendent of Education from establishing and conducting a text-book depository for the sale of the books herein named, either with or without the

consent of the said party of the second part. But such depository, when established by the County Superintendent of Education, may be accepted in lieu of the special depository herein contemplated.

II. The party of the second part, upon receipt of the retail contract price herein given, will furnish, either through its home office or through the central text-book depository, to any dealer or person in this State, the book or books herein named at the prices herein stipulated without any additional charge whatever to said dealer or person, unless the purchaser stipulates in writing that his order is to be filled by mail or express. In such case said purchaser shall pay the additional charges for delivery by mail or express. Only those dealers in charge of County text-book depositories approved by the State Board of Education shall be entitled to or shall receive any discount whatever from the said contract retail price.

III. The party of the second part will establish and permanently maintain in the State of South Carolina a central text-book depository, at which all the books herein adopted by the State Board of Education shall be constantly kept in stock; the location and manager of said central depository to be approved by the said State Board of Education, and the said manager to give a bond in the penal sum of \$5,000 conditioned for the faithful performance of this contract. The party of the second part further agrees that the manager of the central depository shall be the agent of the publisher to perform any and all service required by this contract, in the name and stead of the party of the second part. Any and all orders for text-books from a County depository, a County Superintendent of Education, or an individual, shall be filled by delivery to post-office or any common carrier by the central depository within three days; and any neglect, failure, or refusal to fill such order within three days shall be considered a violation of this contract, for which the manager of the central depository shall be liable on his bond in the sum of \$25.

IV. The party of the second part will furnish, sell, and deliver to the agencies, depositories, and County Superintendents of Education the books herein named at a discount of not less than ten per cent. from the contract prices herein specified, and will take from the central text-book depository now operated in the city of Columbia and from the County Superintendents of

Education any and all books purchased prior to June 1, 1911, and displaced by this contract, at the prices which said displaced books actually cost said central depository or said superintendents delivered to them; the party of the second part, in addition to said cost, to pay all expenses and charges for transportation in delivering the said displaced books so taken from said County Superintendents of Education, so that the public school fund now invested in text-books pursuant to Section No. 1239, Volume I., Code of Laws, 1902, may not be impaired or diminished.

V. That the party of the second part agrees to print upon the back cover of each book herein adopted the words, "Contract Retail Price, \$....., Contract Exchange Price, \$....., South Carolina Edition, 1911. Any increase in price should be reported by the purchaser to the State Superintendent of Education." Provided, however, That after July 1, 1916, the party of the second part may print the said words on a slip and attach same to each book, after notice of the use of such slip has been given to and approved by the State Superintendent of Education.

VI. The party of the second part further agrees to and with the party of the first part that it will supply each and all of the books embraced in this contract at the exchange prices herein set forth, and will accept in exchange any and all books which contain as much as sixty per cent. of their original leaves with or without backs, and which were used in South Carolina under State adoption contract, or in special districts exercising the right of independent text-book adoption, during the five-year period, 1906-1911, and which are upon the same subject as the books for which they are offered in part payment. In any exchange of books the pupil, patron, or citizen of South Carolina shall pay in cash only the exchange price stamped on the back of the new book introduced. It is agreed, further, that these conditions of exchange shall apply to all books now on the State list that are readopted hereby, and that the period of said exchange shall expire on December 15, 1912.

VII. The party of the second part guarantees that the books adopted shall at all times be the same in every respect as the samples submitted, of the same quality of paper, print, and binding, said samples to be marked as official by the party of the second part and kept on file in duplicate in the office of the State Superintendent of Education, and that the prices shall not be increased during the period of adoption to June 30, 1917;

and further agrees, that if at any time during the period of this contract a book herein adopted, or any edition of it, shall be sold or offered by the party of the second part under like conditions of local distribution at a lower contract retail price to any dealer, person, city, school district, County or State, outside of the State of South Carolina, than the price agreed upon in this contract, then that lowest price shall become the contract price between the party of the second part herein and the party of the first part. It is further agreed that between the fifteenth and the thirtieth day of June of each year covered by this contract the party of the second part shall file with the State Superintendent of Education a statement under oath that none of the books covered by this contract have been sold by it to or in any other State or States at a lower price than is provided under this agreement, or if lower prices have been charged or received, then such statement under oath shall set forth such lower prices, the name of the book or books so sold at a lower price or prices, reasons for the reduction in price, and the contracting purchaser or purchasers thereof: Provided, further, That if the party of the second part, during the period of this contract, shall sell or offer to sell at the price agreed on in this contract a book of better binding, material, or workmanship than the book or books sold to the party of the first part, then the party of the second part is hereby bound to furnish to the party of the first part the book or books of the same binding, material, or workmanship as sold or offered for sale to other purchasers.

VIII. That for and in consideration of the foregoing, and in further consideration that the party of the second part do execute and deliver to the party of the first part a good and sufficient bond in the sum of \$500.00 for each book herein adopted up to and not exceeding \$2,500.00 from any one publisher for the faithful performance of this contract, the form and execution thereof to be approved by the Attorney General of the State of South Carolina, as required by Section No. 1184, Volume I., Code of Laws, 1902, the party of the first part has adopted the books herein named at the prices herein stated, and agrees and contracts that it will urge upon the teachers of the public schools, and upon school officers the introduction of the adopted books to the exclusion of all the books on the same subject as rapidly as may seem to said teachers and school officers feasible during the period up to June 30, 1917; and the said party of the first

part further agrees that it will endeavor to enforce as a rule for the government of the public schools the following: That no pay warrant shall be issued by any board of trustees or approved by any County Superintendent of Education in favor of any teacher who, after September 1, 1911, uses in the public schools of this State any text-book to the exclusion of the text-book or books herein adopted on the same subject.

BOOKS	Contract Retail Price		Contract Exchange Price	
	Cloth	Board	Cloth	Board

IX. It is hereby further agreed that the party of the second part has not been heretofore and is not now directly or indirectly interested in any firm, corporation, or syndicate, by which the benefits of competitive bidding have been denied to the people of South Carolina in the adoption of text-books covered by this contract, and the affidavit submitted with the bid of the party of the second part is hereby made a part of this contract. If at any time this affidavit or any part thereof is found to be untrue, this contract shall immediately become null and void.

X. The party of the second part further agrees that on September 1, 1911, it will give bond in some surety company authorized and licensed to do business in the State of South Carolina, in the sum of \$....., the form and execution thereof to be approved by the Attorney General of South Carolina. Any violation of this contract by the party of the second part shall work a forfeiture of \$25.00 on said bond, any recovery to go into the State treasury for the use of the permanent school fund of this State, and all attorney's fees incurred by reason thereof to be paid by the party of the second part. This bond shall not be exhausted by a single recovery, but may be sued on from time to time by the party of the first part in its discretion. Said bond shall be further increased in amount upon

thirty days' notice, and any refusal by the party of the second part to give such additional bond shall cause a forfeiture of this contract; and the said bond shall be transferred to another surety company upon demand of the party of the first part upon like notice, if at any time the said party of the first part deems such transfer necessary or advisable.

In witness whereof said State of South Carolina, party of the first part, herein represented by.....
Governor of said State, and, as such, Chairman of the State Board of Education, and.....
State Superintendent of Education, and, as such, Secretary of said Board, and.....
party of the second part, have signed these presents this.....
day of....., 1911.

State Board of Education of the State of South Carolina by
.....
Governor, *ex officio* Chairman, and.....
State Superintendent of Education, *ex officio* Secretary:

PARTY OF THE FIRST PART.

..... of.....
by

PARTY OF THE SECOND PART.

AMENDMENTS TO SECTION II., SECTION V., AND
SECTION VI., OF THE TEXT BOOK CONTRACT
ADOPTED BY THE SOUTH CAROLINA STATE
BOARD OF EDUCATION, JUNE 20, 1911.

II. The party of the second part, upon receipt of the contract retail price herein given, will furnish, either through its home office or through the central text-book depository, to any dealer or person in this State, the book or books herein named at the prices herein stipulated without any additional charge whatever to said dealer or person for transportation. Only those dealers in charge of county text-book depositories approved by the State Board of Education shall be entitled to or shall receive any discount whatever from the said contract retail price.

V. That the party of the second part agrees to print or paste upon the inside of the front cover of each book herein adopted the words, "Contract Retail Price \$——.—; Contract Exchange

Price of each and every book in the series, \$——. South Carolina edition, 1911. Any increase in price should be reported by the purchaser to the State Superintendent of Education."

VI. The party of the second part further agrees to and with the party of the first part that it will supply each and all of the books embraced in this contract at the exchange prices herein set forth, and will accept in exchange any and all old books, which were used in South Carolina under State adoption contract, or in special districts exercising the right of independent text-book adoption, during the five-year period, 1906-1911, and which are upon the same subject as the books for which they are offered in part payment.

In every exchange of books of the same grade on the same subject, the pupil, patron, or citizen of South Carolina shall pay only the contract exchange price printed or pasted on the inside of the front cover of the new book introduced.

In every exchange of books where an old book of higher grade is offered for a new book of lower grade on the same subject, the pupil, patron, or citizen of South Carolina shall pay only the contract exchange price printed or pasted on the inside of the front cover of the book introduced.

In every case of exchange of a book of lower grade for one of higher grade, the pupil, patron, or citizen of South Carolina shall be allowed on the purchase price of the book sought to be bought an amount equal to that which would be allowed were the old book offered in exchange for a new one of the same grade.

It is agreed, further, that these conditions of exchange shall apply to all books now on the State list that are readopted hereby, and that the period of said exchange shall expire on December 15, 1912.

BLANKS FOR SEALED BIDS

TO BE SUBMITTED TO THE STATE BOARD OF EDUCATION OF THE
STATE OF SOUTH CAROLINA,

Through its Secretary, at Columbia, on or before June 16, 1911, by any and all writers and publishers of school text-books submitting samples for the consideration of the Board with a view to their adoption for use in the free public schools of South Carolina from September 1, 1911, to June 30, 1917.

The State Board of Education will adopt a single list of text-books for all the free schools of the State, for which it may lawfully prescribe and enforce the use of a uniform series of text-books. The adoption will be made at a meeting of the Board beginning 10 a. m. Saturday, June 17, and all samples submitted for examination must be in the hands of the members on or before June 1. Each bid must be accompanied with a written statement, circular, or catalogue giving the ordinary market price of each book offered.

Bidder: (If firm, give the name and address of each individual composing the firm; if an incorporated company, give the name and address of the president and the secretary of the company.)

.....

The undersigned hereby offers to the State Board of Education of the State of South Carolina the following named text-books, bound in cloth and board, and already submitted in sample copies to the several members of the State Board of Education for adoption in the schools of South Carolina at the prices indicated.

BOOKS	Contract Retail Price		Contract Exchange Price	
	Cloth	Board	Cloth	Board

Each bid should be accompanied with a certified check for \$200.00 for each series or book, not to exceed \$1,000.00 from any one bidder, to be deposited with the State Treasurer, and guaranteeing the ability of the bidder to execute the contract in case his bid is accepted. If preferred the bidder may give bond in like sum in a surety company authorized and licensed to do business in South Carolina. Any successful bidder refusing or

neglecting to execute the contract within fifteen days after the acceptance of his bid shall forfeit this deposit.

Exchange period ends December 15th, 1912.	

Any other Physiologies in use in South Carolina from 1906-1911 are also exchangeable on this exchange basis.

Any increase in these prices should be reported to the State Superintendent of Education.

No exchanges were allowed on: A Record of My Reading, American History Leaflets, Applied Arts Drawing Books, Berry's Writing Books, Augsburg's Drawing, Thomas' Spelling Blanks, and no labels were calculated or reported for use in Webster's Dictionaries.

The committee on exchange prices made its report July 21, which report was adopted by the State Board of Education.

The Secretary was instructed to furnish each publisher with a copy of the official labels approved by the Board for use in the adopted texts to be furnished by his house. A full set of labels was also furnished the manager of the Central Text-Book Depository with instructions that no book should be placed on sale without the proper official label.

COURSE OF STUDY FOR ELEMENTARY SCHOOLS.

Extensive modifications of this course are necessary in schools taught by one teacher. For details and suggestions see *Manual for Elementary Schools*.

For exchange price of books see paster on inside of front cover of texts.

FIRST GRADE.

Wheeler's Graded Primer (25c).

Writing at blackboard and at seat with pencil and unruled paper.

(Do not use copy books this year).

Counting and oral number work. Writing numbers to 100.

Stories by teacher and pupils as basis for language work.

Memorizing short easy poems.

Oral nature lessons adapted to season and locality.

Singing.

ADVANCED FIRST GRADE.

(In long term schools teachers will find it possible to complete all the work of the first and advanced first grades in one year).

Wheeler's Graded First Reader, basal (25c).

Stepping-Stones to Literature, First Reader, supplementary (20c).

Supplementary readings from school library.

Stories and language training.

Memorizing short easy poems.

Spelling from Reader.

Oral and written number work based on first twenty pages of Milne's Progressive Course, First Book. (The book should not be placed in the hands of the pupils in this grade).

Writing at seat and blackboard.

(Do not use copy books this year).

Oral nature lessons adapted to season and suggested by environment.

Singing.

SECOND GRADE.

Wheeler's Second Reader, basal (35c).

Stepping-Stones to Literature, Second Reader, supplementary (25c).

Supplementary readings from school library. (Myths, Tales, Fairy Stories and Nature Stories).

Spelling from Reader and from Progressive Course in Spelling, Book I (13c).

Language work based on reading and stories.

Memorizing easy poems.

Oral and written number work, Milne's Progressive Arithmetic, First Book, Part I (32c).

Berry's Writing Book No. I (5c).

Augsburg's Drawing Book, First Year (15c).

(Applied Arts Drawing Book No. 21, supplementary, 10c).

Oral nature lessons adapted to season and suggested by environment.

Singing.

THIRD GRADE.

Heart of Oak Books, Third Reader, basal (32c).

Stepping-Stones to Literature, Third Reader, supplementary (30c).

Supplementary readings from school library. (Bible, Hero and Nature Stories).

Language training for ease and correctness in speech.

Memorizing short selections in prose and poetry.

Progressive Course in Spelling, Book I (13c), Section 1 completed.

Milne's Progressive Arithmetic, Book I, Part II completed.

Berry's Writing Book No. II (5c).

Augsburg's Drawing Book, Second Year (15c).

(Applied Arts Drawing Book No. 22, supplementary, 10c).

Oral lessons in practical Hygiene.

Nature Study and Community Life, with special reference to local industries.

Singing.

FOURTH GRADE.

Heart of Oak Books, Fourth Reader, basal (35c).

Hill's Fourth Reader, supplementary (35c).

Biographical readings from school library.

Oral and written Spelling, Progressive Course in Spelling, Book I completed.

Withers-Kinard—The English Language, Book I (32c), to page 130.

Maury's New Elements Geography (45c), to page 49.

Arithmetic, Milne's Progressive, First Book completed. (Emphasize mental work, and quickness and accuracy in fundamental operations).

Ritchie-Caldwell's Primer of Hygiene (35c).

Berry's Writing Book No. III (5c).

Augsburg's Drawing Book, Third Year (15c).

(Applied Arts Drawing Book No. 23, supplementary, 11c).

Observation lessons in community life and activities, and lessons introductory to Agriculture.

Singing.

FIFTH GRADE.

Heart of Oak Books, Fifth Reader, basal (35c).

Hill's Fifth Reader, supplementary (40c).

Supplementary classics from school library.

Written and oral Spelling, Progressive Course in Spelling, Book II (13c), Section 1.

Withers-Kinard—The English Language, Book I completed.

Milne's Progressive Arithmetic, Second Book (36c), to page 146. (Emphasize mental work).

Maury's New Elements Geography completed.

White's Beginners' History of the United States (40c).

Berry's Writing Book No. IV (5c).

Augsburg's Drawing Book, Fourth Year (15c).

(Applied Arts Drawing Book No. 24, supplementary, 11c).

School Lessons in Plant Production, based on Bulletin No. 409, United States Department of Agriculture (free).

Singing.

SIXTH GRADE.

Standard English Classics, selected from Riverside Literature Series (38c). (See Manual).

Kinard-Withers—The English Language, Book II (44c), to page 86, with frequent exercises in Composition.

Progressive Course in Spelling, Book II, Section 2. (Written and oral).

Milne's Progressive Arithmetic, Second Book, to page 233.

Maury's New Complete Geography (88c), to page 98. (In connection with Southern States study South Carolina supplement found in Appendix).

White's The Making of South Carolina (50c).

Ritchie—Primer of Sanitation (40c).
 Berry's Writing Book No. V (5c).
 Augsburg's Drawing Book, Fifth Year (15c).
 (Applied Arts Drawing Book No. 25, supplementary, 11c).
 Oral lessons in Agriculture, with practical exercises in School
 Gardening and Manual Training.
 Singing.

SEVENTH GRADE.

Standard English Classics, selected from Riverside Literature Series (38c). (See Manual).

Kinard-Withers—The English Language, Book II completed, with weekly exercises in Composition.

Written and oral Spelling, Progressive Course, Book II completed.

Milne's Progressive Arithmetic, Second Book completed, including special supplement containing practical problems in Farm Arithmetic. Note—Teachers whose classes complete this book thoroughly before the end of the year may introduce Book III (41c) in the Seventh Grade.

Maury's New Complete Geography.

Thompson's History of the United States (70c).

Wallace's Civil Government of South Carolina (60c).

Duggar's Agriculture for Southern Schools (60c).

Brooks' Story of Cotton, supplementary, (60c).

Elementary Cooking for girls (optional).

Berry's Writing Book No. VI (5c).

Augsburg's Drawing Book, Sixth Year (15c).

(Applied Arts Drawing Book No. 26, supplementary, 11c).

Singing.

Note—For optional supplementary reading above the fourth grade:

Snyder's Selections from the Old Testament (30c).

Hall's Half Hours in Southern History (75c).

Simms' The Yemassee (68c).

Mims & Payne's Southern Prose and Poetry (65c).

Note—For optional use in written spelling:

Thomas' Spelling Blanks (5c).

Note—Dictionaries:

Webster's Primary (44c).

Webster's Common School (65c).

Webster's High School (90c).

Webster's Academic (\$1.35).

HIGH SCHOOL COURSE OF STUDY.

This course indicates the text-books adopted by the State Board of Education, and suggests the year in which each book may be used. For details in making up a curriculum see High School Manual. It is recommended that not more than five subjects be given any class in any one year.

FIRST YEAR.

Buehler's Modern English Grammar with Composition....	\$.55
Payne's Common Words Commonly Misspelled.....	.22
English Classics—Scribner's and Riverside Series, each...	.25
Milne's Progressive Arithmetic, Book III.....	.41
*Wells' Algebra for Secondary Schools, Part I.....	.68

May 10, 1911.

The R. L. Bryan Company, Mgrs., Central Text-Book Depository, Columbia, S. C.

Dear Sirs: Please furnish me on or before June 15 a full and complete statement showing:

1. The number of copies sold of each text-book adopted for the schools of the State by the State Board of Education in its contract covering the five-year period, Sept. 1, 1906, to Aug. 31, 1911.
2. The total value under existing contract of all such text-books handled by the central text-book depository, and through it by the several County text-book depositories.
3. The total amount of business done by each of the twenty-one companies represented in the present contract so far as this business relates to South Carolina.

Kindly report also on the number of text-book depositories at present operated in the State giving as correctly as possible the amount of stock on hand in each depository and the value thereof.

Please include also the amount of stock now on hand in the Central Text-Book Depository and the value of the same. This

information concerning the number of depositories, the amount and value of text-books will be of vital importance to the Board in fixing definitely the terms of the new text-book contract.

I spoke to you in person concerning this matter some six weeks ago, but now put it in writing in order that the information may be forthcoming in proper season.

Thanking you in advance, I am,

Yours respectfully,

(Signed) J. E. SWEARINGEN,
State Supt. of Education.

May 22, 1911.

Hon. J. E. Swearingen, State Supt. Education, Columbia, S. C.

Dear Sir: Replying to your letter of the 10th inst. asking for information regarding the sales of State adopted books for the past five years, we beg to hand you herewith our report and answers to your inquiries as follows:

"1. The number of copies sold of each text-book adopted for the schools of the State by the State Board of Education in its contract covering the five-year period Sept. 1, 1906, to Aug. 31, 1911."

Answer. It is impossible for us to give the exact number of each text-book sold. Our agents throughout the State will not make proper reports to us. We have a specially prepared blank for local depositories to make report to us on, but we simply can not get them to make an inventory or list showing the numbers of each text they have remaining on hand. If they would take time to make a correct list it would then be an easy matter for us to ascertain the numbers of each text that have been sold the past five years, as we know from our invoices and records the number of each text that has been bought. We could simply add the totals from each depository with stock on hand at Columbia and subtract from the totals bought from the publishers and the result would give the exact number of each text sold. But, as stated, our agents will not make out these lists. They simply give us the value of the stock they have remaining on hand.

We call your attention to Exhibit "A," which is a list of all the books bought by us from the different publishers, and

handled by us and through us by the local depositories and dealers in the State.

"2. The total value under existing contract of all such text-books handled by the central text-book depository and through it by the several county text-book depositories."

Answer. See Exhibit "A."

Total books bought from the publishers by us....\$508,246.63,

Less

Stock on hand—Columbia.....\$ 7,500.52

Stock local depositories..... 17,210.80

24,711.32

Value of the stock sold for five years.....\$483,535.31

"3. The total amount of business done by each of the twenty-one companies represented in the present contract so far as this business relates to South Carolina."

Answer. See Exhibit "A," which shows the amount of business done by each publisher. The University Publishing Company sold out in 1906 to D. C. Heath and Company. We credit Bain's First Latin and Gildersleeve-Lodge Latin Grammar to Heath and Company, making twenty companies represented in our statement.

"Kindly report also on the number of text-book depositories at present operated in the State, giving as correctly as possible the amount of stock on hand in each depository and the value thereof."

Answer. See Exhibit "B."

This, however, is not a complete list of all the county depositories, nor is it a fair showing as to the amount of stock they usually carry. The amount of stock now on hand throughout the State is only \$17,210.80, whereas, during the school months, say September 1 to January 31, we carry from \$50,000 to \$60,000 worth of books at local depositories. Inasmuch as this is the end of the present adoption, as well as the closing of the schools, we have been making every effort to reduce the stock as much as possible in order to have very little left on hand. For instance, our Mr. DuPre at Spartanburg carries during the busy season from four to five thousand dollars' worth of stock, while at this time he has only about \$400.00 worth of stock on hand.

The same explanation applies to the depositories at Newberry, Abbeville, Charleston, and in fact all the larger towns. Again, many of our agents have recently returned all of their stocks to us as their local schools have closed down for the summer months.

"Please include also the amount of stock now on hand in the Central Text-Book Depository and the value of the same."

Answer. See last page of Exhibit "B."

Yours very truly,

(Signed) THE R. L. BRYAN CO.

CHAPTER III.

Report of the State Supervisor of Elementary Rural Schools.

REPORT OF THE STATE SUPERVISOR OF ELEMENTARY RURAL SCHOOLS.

To the State Board of Education.

Gentlemen: June 30th, 1910, completed the first year of my work as State Supervisor of Elementary Rural Schools for South Carolina. Since the position is new, its duties somewhat indefinite, and the popular conception of its activities somewhat hazy, it might be well to indicate briefly the lines of effort which I have been pursuing.

FIELD WORK.

I have assumed that the only supervision which counts for much in any system of schools is that in which the Supervisor comes in direct personal contact with his problem and with those who must solve it. Acting on this assumption, I have spent by far the larger part of my time with the County Superintendents visiting the country schools of the State, studying their needs, exchanging counsels with the County Superintendents, assisting the teachers in their classroom work, consulting with trustees, making suggestions as to improvements in grounds and buildings, and illustrating phases of the supervision which a County Superintendent might profitably give his schools.

Early in the spring, upon the invitation of County Superintendents, I made week engagements by Counties which will use up all my time till the last of January. On these visits the County Superintendent is requested to use me where I can be of most service to him in his work. He usually arranges a visit to districts in which he is endeavoring to levy a special tax, erect a new school house, effect a consolidation, or to harmonize conflicting interests. By taking photographs of the schools and buildings which we visit, I have accumulated more than five hundred pictures illustrating school improvement in South Carolina and in other States. Some of these have been made into lantern slides and the County Superintendent usually arranges three illustrated night lectures at strategic points in the County. On Saturday, during the week of my visit, he

calls a meeting of the trustees and teachers at the county seat. At this meeting the observed conditions of the County are discussed freely and definite plans are made for progressive movements. For lack of time I am compelled to decline at least three times as many invitations as I can accept. At the conclusion of the week's visit I make a formal report to the County Superintendent on conditions in his County embodying such suggestions as may have occurred to me during the inspection of his schools. This report is usually published in the County papers.

During the summer and at intervals during the year I have also made many special visits on the invitation of trustees or the request of the State Superintendent. I have endeavored to inspect as many of the buildings which have received State aid as the limited time at my disposal would permit. In the field work I have traveled in South Carolina during the past year 20,000 miles by rail and 2,000 miles by buggy.

I cannot leave this subject without expressing my sincere appreciation of the kindness with which my visits have been received by the County Superintendents and the courteous hospitality which has been bestowed by the trustees and people whose schools I have visited. I regret exceedingly that I have as yet been unable to visit at all some Counties in the State.

OFFICE WORK.

During the year ending July 30th the postage account of my office was \$83.22. More than 4,000 pieces of stamped mail were sent out during that period, and the office correspondence is increasing daily. This correspondence includes letters to the County Superintendents and the press of the State, communications with teachers and trustees asking advice as to school work, business relating to school building plans referred to my office by the State Superintendent of Education in accordance with the resolution of the State Board, and numerous letters of miscellaneous character. Through the kindness of the University of South Carolina 8,000 copies of my last report entitled "A Statement of the Rural School Problem in South Carolina," were printed as a University Bulletin, addressed at my office and mailed by the University to the school trustees and teachers of the State. During the year we have mailed out to the County

Superintendents and teachers 10,000 Government Bulletins under the frank of our United States Senators. Another 10,000 bulletins have been mailed by the Department of Agriculture to lists of trustees and teachers furnished by my office. The office work requires a competent stenographer. Up to this time the expenses for clerical help have been paid from a surplus of the Peabody appropriation resulting from the fact that the appropriation was made beginning with January 1st, and the supervisor did not begin work until June 15th. This surplus has now been exhausted and some other provision must be made, if the work is to continue unimpaired.

TEACHERS' MANUAL FOR ELEMENTARY SCHOOLS.

During the year a Teachers' Manual for the Elementary Schools of South Carolina, a pamphlet of 154 pages, has been prepared at the request of the State Superintendent and State Board of Education. It is hoped that this Manual may be of some service in unifying the elementary school work of the State.

RURAL SCHOOL SUPERVISORS.

During the year it has been my privilege to co-operate with Miss Leila A. Russell of Winthrop College in the experimental work in school supervision which has been established in connection with the College by the Peabody Board of Trust. Miss Russell's work has been so efficient that many other Counties in the State are eager for a similar experiment. Extracts from Miss Russell's report are appended hereto and made a part of this report. In response to the earnest solicitation of County Superintendent Howell of Dorchester County, I placed the desirability of extending the County supervision before Dr. Wickliffe Rose, General Agent of the Peabody Board, and secured from him \$250.00 for the purpose, conditioned on the raising of the remainder of the salary and traveling expenses in Dorchester County. The condition was promptly met and Miss Caroline L. Dickinson has been installed as assistant to County Superintendent Howell in the supervision of the rural schools of his County.

EXPERIMENTAL RURAL SCHOOL.

Through the generosity of the Peabody Board of Trust and the kind interest of Dr. A. P. Bourland, Field Agent, a small appropriation was granted to establish at Winthrop College an experimental school to investigate the rural course of study and to devise a course based on rural activities. We were fortunate in securing Mrs. Hetty S. Brown, a graduate of Winthrop College and a former teacher in the Spartanburg city schools, to have charge of this experiment. The success of Mrs. Brown's work has exceeded our brightest hopes. The experiment has not yet been concluded, but in the near future it is hoped that a bulletin may be issued giving an accurate account of the experiment, and the results obtained, and containing helpful suggestions to country teachers who may wish to relate their school vitally with the activities of the rural community.

TEACHING.

As Professor of Elementary Education in the University of South Carolina, I am giving on Mondays a course in the School of Education entitled "Administration and Supervision of Rural Schools." This course is intended for young men who are preparing for rural school supervision, either as County Superintendents or as principals of rural schools. Most of last year's class have already accepted rural school principalships.

As Professor of Elementary Education of Winthrop College, I offer each year to the senior class a three-weeks' course of lectures on "Rural School Problems in South Carolina." This course is given in partnership with Miss Leila A. Russell, the County Rural School Supervisor of York County. The object of this lecture course is to present the rural schools to the young women of the State as a field of service, and to give them a first hand acquaintance with actual conditions.

At the session of the Winthrop Summer School I gave two courses entitled "Problems of the Rural School" and "Special Methods and Devices for Rural Teachers." In these classes eighty-five country teachers were enrolled.

During the year it has been my privilege, on the invitation of the college presidents, to speak to the student body of several colleges. These include Wofford, Furman, College for Women, Columbia College, and Limestone College. As opportunity offers

I hope to visit all the colleges of the State in the interest of the rural school work.

Allow me to present for your consideration a few Rural School Problems which demand attention.

SUGGESTED SOLUTIONS FOR SOME RURAL SCHOOL PROBLEMS IN SOUTH CAROLINA.

FINANCIAL PROBLEMS.

I. *County Disparities in School Revenues.*

A study of summary 5, page —, of the State Superintendent's Report will convince the most skeptical that there are serious defects in our methods of school support. The County range from \$34.72 per capita to \$5.78 per capita for white children is entirely too wide to warrant our calling our public schools a State system. Because of natural economic processes the visible wealth of the State is concentrated in certain centers. The whole State has contributed, and is daily contributing to the maintenance of these favored centers. Let us compare Richland and Horry Counties. By virtue of its position, natural advantages, and the location of the State Capital in its borders, railroads, cotton mills and other manufacturing, commercial and financial enterprises have been concentrated in Richland County. The constitutional 3-mill tax imposed on this aggregated wealth, and the County dispensary patronized by the people of many other sections, without special taxation except in two districts, gives a per capita of \$29.90 to the white children of that County. Because of its position Horry County necessarily has little railroad mileage and few manufacturing enterprises. The per capita for children in Horry County in which 54 districts levy special taxes is only \$5.78.

This disparity arises from the fact that the constitutional 3-mill tax is purely a County tax. It is levied on all the property of the County and distributed among the school districts of the County on the basis of the combined white and negro enrollment. Since the whole State has had a part in the production of the visible wealth concentrated in favored centers, all this wealth should contribute its quota to the education of the children in all the Counties. This is done in most States by the levy of a State School tax. If we continue to attempt the equalization by direct State appropriations, these appropria-

tions for rural schools should be largely increased and more effective methods of distribution devised.

When rightly understood the true welfare of the city may be conserved only by making the rural sections prosperous and contented. Poor country schools is the most potent cause of the country exodus in South Carolina.

The appended table showing the cityward movement of the white country pupil during the past five years may be interesting in this connection:

TABLE 1.—COMPARATIVE ENROLLMENT IN TOWN AND COUNTRY SCHOOLS IN 1906-1911.

Saluda	442	482	2,304	2,163	555	636	2,340	2,439
Spartanburg	3,823	7,166	7,008	6,222	2,777	2,966	3,883	4,476
Sumter	730	912	1,404	1,385	1,001	1,817	4,623	5,960
Union	1,404	2,360	1,973	1,640	960	2,006	2,575	3,332
Williamsburg	488	1,029	2,632	2,568	118	465	4,606	5,067
York	1,536	2,153	3,075	3,045	1,514	1,567	5,867	5,796
Totals	42,569	63,591	104,484	97,239	38,513	42,425	132,509	151,015

As will appear from the above table, the white enrollment in town schools for 1906 was 42,569 or 28 per cent. of the total white enrollment. This increased to 63,591 in 1911, or 38 per cent. of the total white enrollment. In the country the enrollment decreased from 104,484, or 72 per cent., in 1906, to 97,239, or 62 per cent., in 1911. This, in spite of the fact that the total enrollment of the State had increased 12,777 during that period. The country schools have, therefore, lost 10 per cent., or 16,083 pupils during the five-year period. For the negro race, both town and country show a decided increase. In 1906 77 per cent. of the negro pupils were enrolled in country schools, and in 1911 77.8 per cent. The negro enrollment in country schools shows an increase of 18,506 during the five-year period. It is impossible to get the census statistics by race for country and town. The figures for school enrollment, however, indicate decidedly that the white people are leaving the country and that the negroes are gradually taking their places. My own observation tells me that the search for better school facilities is the most active motive for the country exodus. In my opinion, the welfare of the State, both city and country, demands that the white man still continue to live in the country in South Carolina. His removal to town means a decreased productivity of the soil and ultimate disaster for the town. With the advent of good roads and automobiles it frequently becomes a question with the prosperous farmer as to whether he will live in town and ride to his farm in the country, or live on the farm and ride to town. The decision will perhaps determine the occupation of his son. The school will most frequently determine this choice. The welfare of the country school becomes, therefore, the concern of the town as well as of the country, and the centers of wealth should be willing to have a larger share in the maintenance of good schools in the poorer rural Counties.

2. District Disparities Resulting from Unequal Race Distribution.

Even in the individual Counties our present method of apportionment works serious hardships. The unequal distribution of races in the districts of the County frequently gives one district more money than it can use advantageously, while another languishes for lack of proper support. To illustrate: In Richland County the per capita for each child enrolled derived from

the constitutional 3-mill tax, the dog tax, the poll tax, and the dispensary profits amounts to almost \$10.00. In the lower section of the County there is a great preponderance of negroes. In the Sand Hill section and in the cotton mill districts there is a large majority of whites.

In three school districts of the lower section, designated A, B, and C, the following condition prevails:

A

White pupils	56
Negro pupils	597
<hr/>	
Total	653
District Revenue	\$6,500

B

White pupils	63
Negro pupils	647
<hr/>	
Total	710
District Revenue	\$7,000

C

White pupils	104
Negro pupils	805
<hr/>	
Total	909
District Revenue	\$9,000

It is a matter of common knowledge that the larger part of this money is spent on the white schools. The negro schools are usually taught in unceiled buildings in which one teacher has as many as 80 to 100 pupils for a short term. It will be readily seen that considerable ingenuity will be required to spend upon the white children the large balance which will remain. In three other school districts designated, D, E, and F, the following condition prevails:

D

White pupils	225
Negro pupils	40
<hr/>	
Total	265
District revenue	\$2,600

E

White pupils	617	
Negro pupils	90	
		<hr/>
Total	707	
District revenue		\$7,000

F

White pupils	282	
Negro pupils	34	
		<hr/>
Total	316	
District revenue		\$3,100

It will be seen that District B with 63 white pupils has the same amount of money as District E with ten times as many. After maintaining the negro schools in both districts, the per capita for white pupils in District B will be at least six times that of District E. We must bear in mind that the bulk of this money was not raised from either district, but was derived from the railroad, the cotton mills, and the industrial and commercial enterprises located in the city of Columbia. We have simply devised an inequitable method of distribution. The constitutional tax is a County fund. In my opinion it should be divided by the County Board of Education among the schools of the County in proportion to their needs. The white children in the Sand Hill and Cotton Mill sections of the County should receive the same advantages as the white children in the lower part of the County. The negroes in one section should receive the same treatment as the negroes in the other section. A like condition exists in a greater or less degree in all parts of the State and demands immediate attention.

3. *Indefinite District Lines.*

The school fund of South Carolina loses thousands of dollars annually on account of indefinite district lines. I have as yet visited only one County Superintendent in the State who had a correct map of the County school districts. Frequently a taxpayer does not know the number of the district in which his property is located. The tax returns have a blank for township and school district, but the district blank is usually left unfilled. The Auditor's duplicate books are frequently arranged alpha-

betically by townships, which are to all practical purposes dead civil units in South Carolina. The district lines in every County in the State should be firmly established by a competent surveyor and a plat should be made and filed with the County Superintendent and the Auditor and made a part of the County records. When the Auditor's books are arranged by school districts instead of by townships, the County Superintendent and trustees can easily detect omissions, and the County Superintendent can make a copy of the poll list, and the dog returns in each district and send this to the trustees for correction. The added revenue from polls and dogs alone in one year would almost pay for the entire cost of a survey. Because of the indefiniteness of district lines and imperfections in returns, the school districts of the State also lose thousands of dollars each year in special taxes. In my opinion the Legislature should make provision at the coming session to remedy this defect.

4. Suggested Modifications of the Term Extension Act.

Perhaps the most important piece of school legislation of recent years is the Garris Act or the "Term Extension Act." Under the influence of this law 457 school districts have voted a special tax during the last two years, and the movement is destined to continue until it embraces practically all the districts in the State. Allow me to suggest a modification of this act which, in my opinion, would increase its efficiency. Under the provisions of the present law not more than \$100 may be given to any school district, regardless of size or number of pupils enrolled. In a few Counties this proviso has operated to cause a larger school district where a consolidated school was possible to divide into two small districts with one school each so that each district might receive a \$100 appropriation. In my opinion the benefits of this law should be limited to rural communities and the amount should be conditioned on the number of teachers employed and the pupils enrolled, the aid in no case exceeding the amount raised by local taxation. Such a modification would immediately check the tendency to division and would result in the establishment of more consolidated schools. It would also check the tendency of a rural community to organize a high school for the sake of the high school appropriation when the community is not able to maintain a high school department without serious detriment to the elementary

school work. I believe also that State appropriations for rural schools would provide for the encouragement of rural districts which may desire to establish public conveyance of pupils.

5. Need for Increase in Building Appropriation.

One of the most helpful appropriations made by the last Legislature was the \$20,000 to encourage adequate school buildings. In Superintendent Swearingen's report is given a full account of the activities of this fund for the past year. This appropriation not only enables a country district to secure an adequate building, but the proviso requiring the approval of the plans by the State Board furnishes a degree of insurance against serious blunders in construction by those ignorant of the principles of school architecture. The Clemson Building Bulletin prepared for the State Department of Education by Prof. R. E. Lee, and the earlier bulletin issued by Mr. O. B. Martin, have really inaugurated a new period in the school architecture of the State. This appropriation should be increased and made adequate to the demands upon it. Provision should be made for the inspection of all buildings toward which the State makes a contribution.

The negro school buildings in the State are in most cases a serious reflection on our civilization. They are without adaptation to school work, are destitute of all proper furniture and equipment, frequently without window sash, usually unceiled, often without any kind of heating arrangements, and comfortless and unsanitary in the extreme. They are usually erected by private effort and without any sort of suggestion or direction from any competent authority. Frequently the same money spent wisely would secure a cheap but decent building. In my opinion, simple plans for very inexpensive school buildings should be prepared and distributed for the guidance of trustees in the erection of negro buildings, and the negroes should be encouraged to provide school buildings as convenient and attractive as the churches which they are erecting all over the State. I believe that comfortable and sanitary school buildings for the negroes would go far towards raising their standards of living and would awaken new wants and the consequent incentives to labor which now seem to be so sadly lacking. In my journeys over the State this fall I have seen thousands of acres of cotton unpicked. It is useless to expect labor beyond that

necessary to supply the wants of the laborer. The wants connected with the well-kept home are the most constant and the most insistent. A comfortable and attractive schoolhouse for the negro children will help set for them a better standard of living, and will secure for the landowner a more steady and more reliable tenantry.

WANTED, TRAINED TEACHERS FOR COUNTRY SCHOOLS.

The most insistent need of the country school is for the trained teacher who is willing to enter into the community life and lift the educational standards of the people. One year with such a teacher will often revolutionize the popular attitude towards the school.

Near the close of the past scholastic year I endeavored to obtain accurate facts as to the number of college graduates now teaching in the town and county schools of South Carolina. A complete list of all the teachers employed in the County was obtained from most of the County Superintendents. On this list the Superintendent was asked to indicate after the names of the college graduates the colleges from which they received their diplomas, as recorded on his certificate register. The table appended hereto includes the Counties of Abbeville, Aiken, Anderson, Barnwell, Calhoun, Charleston, Cherokee, Chesterfield, Clarendon, Colleton, Dillon, Dorchester, Georgetown, Greenville, Greenwood, Horry, Kershaw, Lancaster, Lexington, Marlboro, Newberry, Oconee, Orangeburg, Pickens, Saluda, Williamsburg. I was unable to secure definite information from the other Counties. The result was as follows:

COLLEGE GRADUATES NOW TEACHING IN 26 COUNTIES OF SOUTH CAROLINA.

	Town.	Country.	Total.
Chicora..	7	12	19
Citadel..	10	12	22

In the Counties named there are 2,616 white teachers employed. 28 per cent. have received college training and most of these are teaching in the town and city schools, and in the consolidated country schools. Few are employed in the one-room country schools. Of the colleges named, only two or three offer an adequate course of professional training.

1. *College Training Courses:* Colleges which furnish teachers should offer pedagogical courses. Even college graduates who have not thought seriously of the problems involved in elementary education enter the schoolroom woefully awkward in their methods of procedure and run the entire circle of traditional errors in teaching and management before getting their bearings. Usually they become disgusted with teaching and leave the profession before experience brings a measure of skill. For the years immediately preceding their first attempt at

teaching, their scholastic interests have been confined to the college subjects and they frequently exhibit an unfortunate tendency to attempt to teach immature boys and girls the last things they learned at college. With mistaken zeal they give more time to algebra and Latin than to primary reading and other subjects absolutely necessary before their students can study profitably the higher branches which they are ambitious to present. Their unpreparedness, and the consequent failure and disgust, rob the teaching profession of many a promising candidate whom a little special preparation would have made a permanent acquisition. I am glad to report that many of our denominational colleges which furnish a large share of the college graduates in the country schools are introducing teacher training courses for such of their students as expect to enter the schoolroom. These short courses should be decidedly practical and immediately usable. Merely to present attenuated theories of education will not serve the purpose. The teacher gets married or enters some other business before seeing the relation between abstract principles and the conditions which are found in the rural school. In my opinion the point of view from which the question should be approached in the short training course may be stated somewhat as follows: If you should accept a position next fall in a country school, to be taught in a typical schoolhouse, and should be confronted on October 1st by thirty-five ungraded school children, exactly what would you do and why? If either must be neglected, it is vastly easier and more interesting to proceed from practice to principle than from principle to practice. College students who are preparing for teaching should have the opportunity to observe good primary work and should have some practice teaching.

To eliminate by adequate preparation the probabilities of failure and to disclose the opportunity for service which the teaching profession offers, will do more to secure permanent recruits than any system of conscription which may be devised. I am unalterably opposed to training a man for military life, for agriculture, engineering, or the ministry and then compelling him to teach two years to pay for his scholarship. The teaching profession needs volunteers, not conscripts.

2. *The Winthrop Summer School*: The Winthrop Summer School should be a potent factor in training elementary teachers.

Its work last summer is already bearing fruit in two hundred country schools. It should be adequately supported and made permanent. In my opinion the summer quarter should attack vigorously the specific problems of rural education and should specialize in elementary work.

3. *Short Training Courses:* Allow me to repeat and emphasize a suggestion made last year—that provision be made for a short course at Winthrop designed especially for elementary teachers of experience who wish to improve themselves and their work. If our scholarship system be justified by the assumption that it prepares teachers, it would be much wiser to spend part of the scholarship appropriation in the training of people who have already taught and who know that they wish to continue teaching than to spend the whole for the education of young girls who through lack of experience do not know their own abilities and tastes. A little figuring with the amount spent for scholarships in South Carolina in comparison with the results obtained will easily convince one that the education of a teacher under our present system is a very expensive process.

4. *High School Training Courses:* After all is said and done, however, the fact remains that we can never expect many of our country schools to be taught by teachers who have received college or normal school training. Winthrop College is perhaps the largest and best normal school in the South. Her graduates are well trained, earnest, and enthusiastic, and rarely do we find a failure among them. After twenty-five years of good work, however, there are fewer than 350 Winthrop graduates now teaching in South Carolina. This is less than half the present student body. The explanation is easy. The average Winthrop graduate marries before she has spent as much time in the school as she spent in the college walls. Her training course is by no means wasted, but this fact does not simplify the problem of those who are endeavoring to find trained teachers for the country schools of the State. The same is true of the graduates of other colleges. In response to a question, "What part of your students teach after graduation," recently addressed to the colleges of the State, the president of a prominent college for girls gave this answer: "About fifty per cent. until they find a husband." Filling up the teaching profession

is like pouring water into a sieve—it is an everlasting makeshift. With the men it is little better. The remuneration is so small that very few men can afford to remain in the profession after reaching adult efficiency and responsibility. Most of our country teachers are at best high school graduates, and we must meet the condition which actually presents itself. If they are to have any special preparation for teaching, it must be given in connection with the high school. *In my opinion the situation imperatively demands a short training course for rural teachers in connection with selected four-year high schools of the State.* In proportion to the expenditure, this would give the largest immediate returns for the country schools.

The practical training course for elementary teachers offered in high schools is no new idea. The need for it exists in many other States and many have already made provision to meet the need. Among the States which have provided for such courses are Arkansas, Florida, Indiana, Iowa, Kansas, Minnesota, Nebraska, New York, North Dakota, Ohio, Tennessee, Virginia, and Wisconsin.

THE HIGH SCHOOL TEACHING COURSE IN KANSAS.

One of the first States to make extensive use of the high school in the training of rural teachers was Kansas. Returning my questionnaire, State Superintendent Fairchild of that State writes as follows:

"Topeka, Kansas, Nov. 28, 1911.

Prof. W. K. Tate, State Supervisor of Rural Schools, Columbia, S. C.

My Dear Mr. Tate: I take pleasure in enclosing herewith the answers to your questionnaire relative to the normal training course in Kansas high schools. I am also sending you under separate cover a copy of our normal training high school manual. In this you will find the text of the law, the rules and regulations that have been established by the State Board of Education in conformity therewith, and the outlines in the distinctly normal training subjects.

Your experience that it is impossible to retain college or normal school graduates in the country schools is also the experience not only of Kansas but of the entire United States. The New York school report for 1908 shows, for instance, that that

commonwealth with her ten normal schools had but twenty normal school graduates in her rural schools. And some investigation made by this department prior to the enactment of our own normal training act shows this condition to be general. In fact, this situation, together with the realization of the inadequate preparation of our rural teachers, led to the enactment of our present law. That this law has more than justified expectations is shown by the following figures:

For the school year 1908-1909 there were 110 high schools and academies officially recognized for the normal training work. In these schools there were 723 seniors and post-graduates, or 26 per cent. of the entire number of high school graduates in the State, who completed the normal training course and wrote upon the examination: 615 of these were successful and have practically all been teaching in our rural schools since. For the year 1909-10 125 high schools and academies, representing 80 of our 105 Counties, met the requirements and were approved by the State Board of Education. In these schools 946 students, or 37 per cent. of all the high school graduates of the State, completed the work and took the examination. Of these 704 passed and are now also for the most part teaching. For the current school year 160 schools have been approved by the State Board and in these more than 1,200 seniors and post-graduates are pursuing the teachers' training work. Moreover, the movement proved so popular throughout the State and appealed so strongly to the judgment of the legislature last winter that by unanimous vote the first appropriation of \$50,000 per year was increased by one-third for the present biennium.

I cannot too strongly commend the movement as one that will utilize existing school plants for the accomplishment of a much-to-be-desired, indeed, an absolutely necessary end—the better preparation of rural school teachers.

Very truly yours,

E. T. FAIRCHILD,
State Supt. Pub. Instruction."

I recently saw such a training department in operation in Minnesota in connection with a rural high school. A trained, experienced, normal school graduate was in charge of the department. Sixteen young women, seniors and post-graduates, were preparing for work in the rural schools of the County.

The training course included practical pedagogy and school management and a review of elementary subjects with special reference to methods of teaching them. Each student in training had every day an hour's work in observation or practice teaching in the elementary grades of the school or with small sections from the lower classes taken to some vacant room, or even assigned to a stair-landing or other unoccupied space in the buildings. The lessons presented by the practice students were prepared after an observation of the regular work of the class teacher in the grade room and after free consultation with the critic teacher. The work of the students which I observed was excellent and there was no loss to the pupils taught by them. At intervals these young women visited country schools in the neighborhood, observed the work under normal country conditions, and even assisted the regular country teacher in her recitations. After graduation these students are given certificates good for two years and most of them go immediately into the rural schools of the County and make good teachers from the beginning. They enter on their work with little of the floundering which characterizes the ordinary inexperienced teacher.

The average teaching life of a South Carolina teacher is four years. We cannot afford to let her spend even one year of this time in painful groping or hopeless inefficiency. It may be urged that a teacher should complete a college course before taking up professional work. This may be true, but we must remember that we are dealing with conditions and not with theories. As long as our country schools are taught by people who have had only a high school training or less, it is nonsense to argue that preparation should be delayed till the completion of a college course. If our country boys and girls are to have satisfactory educational opportunities, something must be done. At present, because of lack of preparation, most of our country boys and girls are debarred from college scholarships, and consequently many who because of their country experience would make good rural teachers have no opportunity for preparation. A girl reared in the city cannot enter into full sympathy with country conditions and is naturally not inclined to submit to the inconveniences which fall to the lot of the country teacher. The result tends to perpetuate and accentuate differences which are already too great. The high school training course will give a measure of relief. Not many of these schools should be estab-

lished at first and the number should always be limited to one in each County. \$5,000 appropriated by the Legislature to be applied to the salary of training teachers in ten such schools would immediately demonstrate the value of the experiment. The normal graduates of the University and Winthrop College would find these positions an attractive field of service and the work of these State institutions would be thereby multiplied many times.

The figures exhibited above show that 29 of the 38 University of South Carolina graduates teaching last year in 26 counties have chosen the rural school as a field of service. This is 76 per cent. of the whole number. If this ratio hold for the 43 counties, there are about 60 of these men in the country schools of the State. These are doing excellent work, and in most cases are true community builders. When we consider the short time which has elapsed since the establishment of the School of Education, this record is a very commendable one. How much more effective their work would be if instead of merely teaching the individual school some of them could bring correct methods of teaching to 50 country teachers through the High School Training Course.

5. Training by Supervision: I wish once more to emphasize the value of proper supervision in the training of teachers. The City Superintendent usually finds a new recruit in his school awkward and inefficient. He must continually assist her in the management of her class and in the improvement of her methods. She progresses rapidly under the right kind of supervision. The country teacher has almost none of this assistance. The sole supervising officer is the County Superintendent, employed at a salary which assumes that he is to devote only a portion of his time to this work and responsible for a territory which makes it impossible for him to visit the schools more than once a year. There are Counties in South Carolina in which the salary of the County Superintendent with three hundred teachers in his charge is less than one-half the salary of the City Superintendent in the county seat with one-tenth the number of teachers. This is not giving the country children a square deal, and no one who would continue the condition is a true friend of the country school. In my opinion no County can afford a County Superintendent who can be secured for less

than \$1,200 a year, and the County should demand all his time for the schools. In many Counties even this is not sufficient for the proper supervision of the schools and the training of the new teachers. The work of Miss Leila A. Russell, as Supervising Teacher for Rural Schools in York County, has demonstrated the value of a competent person who will spend all her time in the field helping the teachers and organizing the School Improvement work. During the year I have visited many schools in which three hours of demonstration work and practical suggestions would double the efficiency of an earnest but inexperienced teacher. The Peabody Board has placed a limited sum at the call of the State Department of Education for the stimulation of this work, and as long as it lasts, \$250 may be given to any County which will in some way secure the rest of the salary and traveling expenses of a competent supervising teacher.

The legislative policy of stimulating self-help by State appropriations, as exemplified by the High School Act, the Term Extension Act, the School Building Act, and the Library Act, is eminently wise. An appropriation of \$5,000 from which \$250 might be given to Counties raising the remainder of the salary of the supervisor, will place an officer in twenty Counties. Such an appropriation would contribute immensely to the efficiency of the country schools.

RELATION TO SCHOOL IMPROVEMENT ASSOCIATION.

The State School Improvement Association has done a great work for the country schools of the State, but even its most enthusiastic officers and earnest friends realize that radical changes in its organization and methods of work are necessary. At present its sole source of dependable income is \$3,000 set aside by the State Board of Education from the Library Fund and awarded annually as prizes for school improvement. The award of prizes in the State at large on written statements of school improvement is necessarily attended by errors in judgment which vitiate the value of the prizes. The officers of the Association now recognize that the County and not the State should be the unit of distribution and effort. The County Supervisor giving all her time to the schools and visiting every section of the County could stimulate the organization of the local Association of parents and friends of the school, and could give

a County Committee of Award accurate information as to facts. At present the State and County organizations are both without funds with which to prosecute their valuable work. Provision for a Supervising Teacher for Rural Schools will solve this problem also.

6. *A State Board of Examiners:* A State Board of Examiners to pass upon the scholastic qualifications of teachers and to award State certificates valid in every County in the State would go far towards securing trained teachers for the country schools. As has been pointed out repeatedly in the messages of the State Superintendent and in the resolutions of County Superintendents, there are now forty-three standards on which teachers' certificates are issued in South Carolina. In the resulting confusion, certificates have been given to many people who are not qualified to teach. These fill up the ranks, degrade the salary, and drive the competent teachers into the city schools or out of the teaching profession. The fine effects of a single standard, even when set by a County Board of Education, is evident in the schools of Anderson County. The County Board of this County has for years declined to recognize any other than college diplomas and Anderson County certificates. This policy has given the County a large percentage of college graduates, and has raised the compensation of the teachers of the schools far above the average. It is of course not intended under the proposed system that teachers' examinations should be held in Columbia only. They would be held in the county seats as at present by the County Superintendent. The papers would be transmitted to the State Board of Examiners together with the certificate of the County Board as to the character and the experience of the applicant. On this statement and the grades obtained in the examination, as determined by the State Examiners, a certificate would be issued which would be valid in every County. The State Board of Examiners would keep a roster of all qualified teachers and a copy of the list would be sent to every County Superintendent. This roster would make it much easier for the County Superintendents to recommend good teachers to boards of trustees and would enable teachers more easily to obtain positions.

The statistics in table 3 include twenty-seven of the forty-three Counties. The ratio will in all probability remain true for the whole State. Sixty-three per cent. of these teachers, including in some instances the town teachers of the County, were teaching for the first term in the position they held; 25 per cent. were teaching for the second term; 7 per cent. for the third term; and only 5 per cent. had taught more than three terms. In the one-room country schools of the State there are at least 75 per cent. of annual changes.

A brief glance at the preceding tables is sufficient argument that consolidation of schools should be stimulated in South Carolina whenever this is possible. A one-teacher school may be a good school; it frequently is. A good teacher may do effective work in such a school and its pupils will frequently hold their own with the pupils of a graded school system. The fact remains, however, that it is steadily becoming more difficult to obtain the best teachers in the one-teacher schools. To face deliberately forty recitations per day, ranging from the primer to algebra, requires more physical strength and self-sacrifice than most people are able to command. The individual class recitation period is so short that the teacher is conscious of her inability to do her best work and is usually driven to a new field after the first year. Without knowing the reason, the people of the

community feel that the school is unsatisfactory, they are prone to lay the blame on the teacher and sometimes demand a change. The table showing the tenure of position in South Carolina last year speaks eloquently on this subject. The most frequent changes are in the one-teacher schools. In the schools taught by one teacher there are not enough pupils in any grade to furnish the social incentive and the emulation necessary to the best school work. Whenever possible schools should be consolidated, even though the children be compelled to go farther to the new school. Experience has shown that even without transportation of pupils there is an increase of from 30 to 50 per cent. in the enrollment of the consolidated school employing two or three teachers over the combined enrollment of the schools which were discontinued. There are, of course, communities where consolidation is impossible, but there are also very many where it is entirely feasible and must be consummated in order to give the people the best school facilities. I feel that the Legislature might very profitably make an appropriation to stimulate consolidation of schools. Many rural communities are now endeavoring to establish high schools when the true need is a good three-teacher elementary school. In the State 37 consolidations have been consummated during the year.

IV. PUBLIC CONVEYANCE OF PUPILS.

TABLE 4.—SCHOOLS EMPLOYING PUBLIC CONVEYANCE OF CHILDREN IN SOUTH CAROLINA.

County.	Number Districts Using Public Conveyance.	Number Wagons.	Children Conveyed.
Alken	1	1	20
Barnwell	1	1	8
Beaufort	1	1	10
Clarendon	1	3	30
Darlington	1	1	8
Fairfield	2	2	16
Georgetown	1	1	25
Kershaw	1	1	10
Orangeburg	2	2	16
Richland	2	7	148
Sumter	1	1	10
Union	1	1	10
	15	23	311

As yet South Carolina has not kept pace with her sister States in the South in the public conveyance of school children to consolidated schools. The above table gives the present status of public conveyance in South Carolina. There are many small, inefficient, country schools in South Carolina which could be discontinued and the pupils conveyed to a good school within driving distance at less expense than it now costs to maintain the weak school. Many States give the County Board of Education the power to discontinue a school with less than twelve pupils and to transport the children at public expense to a convenient neighboring school. In my opinion this power might very profitably be conferred on the County Board in South Carolina.

V. A PLEA FOR STABILITY AND DEMOCRACY IN RURAL SCHOOL ADMINISTRATION.

In the heading I have used the term *Rural School Administration* advisedly. Our other State educational activities have already been given a large measure of stability and democracy. The institutions of higher learning in their charters have insured their stability by providing for continuing boards of trustees elected by the Legislature. The continuity of the board affords an opportunity to define and execute a consistent progressive policy.

The city schools of the State have through special legislation eliminated themselves largely from the operations of the general school law. They have secured special privileges in the election of their school boards, in the selection of text-books, and in the choice of superintendents by the Board rather than by the primary. I venture to say that were the towns and cities of the State compelled to operate their schools under the present general school law, its worst defects would be remedied at the next session of the Legislature. If, for example, the city schools of the State were compelled to change superintendents on January 1st in the middle of the school term, the law would be denounced at once as a wasteful monstrosity. Without effective protest, however, we have for years subjected our country schools to this injustice. Last January nine new County Superintendents of Education went into office in South Carolina. The retiring County Superintendent, knowing that he was to leave the

office, merely arranged his books and accounts ready to deliver the office to his successor and did not visit the schools last fall. The incoming County Superintendent was compelled at the beginning of his term to master the routine of his office and to become acquainted with his books and accounts. As a result, very few schools of these nine Counties received even one visit from the County Superintendents last year. If the term ended with the school year as is the case in the cities, the incoming Superintendent would have all summer to master the details of his office work and could begin his visiting with the opening of the schools in the fall.

Having secured by special legislation satisfactory conditions for themselves, I fear that the cities are inclined to view with complacency, or even with opposition, the efforts to improve the general school law under which the country schools must rise or fall. As an advocate of the country school, I do not ask the abolition of any special privileges necessary to the efficiency of the city school, but only that we be given equal stability and democracy. Allow me to mention some defects which, in my opinion, militate against continuity and freedom in the country schools, and to suggest remedies which might meet the conditions:

1. The State Board of Education is now appointed by the Governor all at one time to serve for four years, unless sooner removed by him. Would it not be better to make this Board a continuing body by selecting one or two members each year as is done in the case of the other boards of the State?

2. The text-books which must be used by the country schools are all subject to change every five years. Would it not be better to divide the list into three sections and to consider changes in one section only every two years, making a six-year adoption?

3. The State Superintendent of Education is now elected by the people for a term of two years. Even in the four-year period which is usually given him, it is impossible to make comprehensive plans and to execute them. The colleges insure continuity in development by committing the selection of their presidents to the Boards of Trustees. Would the people of the State be ready to abandon this policy and elect the presidents of the State colleges by primary every two years? Is there any reason why the president of the University of South Carolina,

with its 450 students, should be given a more stable tenure of office than the State Superintendent of Education, into whose hands we commit the educational policies affecting the 350,000 school children of the State? Is there any good reason why the State Superintendent should not be elected by a continuing State Board of Education as its executive officer and the expert Supervisor of the State school system? Is there any good reason why the salary of the State Superintendent of Education in South Carolina should be the lowest in the United States, much less than the principal city superintendents of the State and scarcely half that of the ordinary college president of the South?

4. The County Superintendent of Education is the most important officer in the County. He should be able to plan wisely the educational program of the County with some assurance of opportunity to execute his plans. Should we not hedge this office with some qualifications? Is the direct primary every two or four years the best way to select an expert? Should we not have the privilege of hunting our man occasionally instead of limiting ourselves in our choice to those who seek the position? Should not the County Superintendent be the executive officer of the County Board just as the City Superintendent is the executive officer of the City Board? The other States of the United States elect the County Superintendent in one of two ways—he is either selected by the County Board or is chosen by the people from candidates possessing certain qualifications fixed by law. Can South Carolina afford to be the only State without either of these restrictions? Can we afford to have the County Superintendents of Education the poorest paid officer in the County? For example, is there any good reason why the County Superintendent of Anderson County, responsible for the apportionment of more than \$100,000 annually and supervising 300 teachers scattered over the entire County, should receive just half the salary of the Superintendent of the Anderson city schools with just one-tenth the number of teachers? Is this a square deal to the country child?

5. Should the County Board of Education be subject to complete change at one time as at present? Would it not be better to have this too a continuing board, the members receiving their office more directly from the people?

6. Could we not find a better way of selecting our district trustees? At present they are all appointed at one time by the County Board of Education. In my opinion the district board should also be a continuing body, one new member being chosen each year for a term of three years. It is my observation that the selection of the district board of trustees by the County Board of Education has a tendency to divorce the schools from popular interest in the community. The trustees are responsible to the County Board and not to the people of the district. The school becomes "Mr. Smith's school," or "Mr. Brown's school," and not "our school." A meeting of the school patrons is a rare and irregular occurrence. Our law does not require an annual report to be made to the people by the trustees. As a result it is unusual to find a school patron in South Carolina who even knows the sources of the school fund, or who has any conception of the amount of money necessary to run the school or of the financial status of the district. The annual school meeting as conducted in many States has been for generations a school of democracy. In it the citizens meet and discuss freely the public business which concerns them most intimately. *South Carolina needs this school for citizenship.* In my opinion there should be an annual school meeting at the close of each school year at which the Chairman of the Board should make to the people a statement of the receipts and disbursements of the year and the condition of the school fund. He should report the amount necessary for the coming year with an estimate of the tax necessary to secure this amount. If this were done, I believe the levying of special taxes would be much less difficult in South Carolina. Without knowledge you cannot expect a lively interest. Ignorance at best produces indifference; we are lucky if it does not produce positive opposition. As a last item of business at the annual school meeting, I believe that one member of the district board of trustees should be selected for confirmation by the County Board. I am aware that there are many people who will disagree with me, urging that such a method would provoke unpleasant contentions in the school community. These differences exist at present. An autocracy when it runs smoothly is the smoothest form of government, but it is not the best training for democratic citizenship.

I believe that the powers of the district board should be limited in some respects. The selection of the teacher should be subject to confirmation by the County Superintendent, who should know that she possesses a valid certificate and is otherwise qualified to teach the school. The location of school buildings should be placed in the hands of the County Board. The powers, however, which are to be exercised by the trustees should in my opinion be exercised by representatives selected by the people themselves. In Alabama the district trustees are elected in this manner at the annual school meeting. The chairmen of the district boards meet and select the County Board of Education which is a continuing body; the County Superintendent is the executive officer of this County Board.

VI. NEGRO SCHOOLS.

During the current year the negro schools of the State enrolled 193,440 pupils. The greater part of the pupils are in the country schools of the State and these schools show an increased enrollment of negro pupils every year. The education of the negro in South Carolina is in the hands of the white race. The white trustees apportion the funds, select the teachers, and receive the reports. The County Superintendent has the supervision of these schools in his hands. We have expended this year \$349,834.60 in the support of negro schools. I never visit one of these schools without feeling that we are wasting a large part of this money and are neglecting a great opportunity. The negro schoolhouses are miserable beyond all description. They are usually without comfort, equipment, proper lighting, or sanitation. Nearly all the negroes of school age in the district are crowded into these miserable structures during the short term which the school runs. Most of the teachers are absolutely untrained and have been given certificates by the County Board not because they have passed the examination, but because it is necessary to have some kind of a negro teacher. Among the negro rural schools which I have visited, I have found only one in which the highest class knew the multiplication table. The teacher is attempting to use the books and follow the course of study provided by the State Board of Education and intended primarily for white schools. The children are studying books which have absolutely no significance for them and which will

be utterly useless in their lives. In South Carolina we have simply turned over a certain portion of the school fund to the negro schools and expect the most ignorant teachers of the State, without any suggestions or directions, to adapt to the special needs of the negro schools a course of study and text-books designed primarily for white children. The negro is now, and will be for years to come, the tenant farmer of South Carolina. His welfare and the prosperity of the white race depend largely on his efficiency as a farmer. I believe that the time has now come for us to attack the negro school problem with the serious intention of adapting the school to the special needs of the negro farmer in an endeavor to teach him agriculture, to encourage manual training, cooking, sewing, personal cleanliness, and hygienic conditions in his home, along with the elements of a common school education. The school should endeavor to set for him a better standard of living and to increase those ever-present and insistent wants which center about a well-kept home, and thus secure for him a better existence, and for the land-owner a more constant labor supply. This problem has not yet been solved, and the "well done" of the whole State awaits the County Superintendent and trustees who will attack it vigorously.

VII.—PERCENTAGE OF TOTAL POPULATION ENROLLED IN SCHOOL.

TABLE 5.

County.	White.			Negro.		
	Population.	Enrollment.	Percentage of Population in School.	Population.	Enrollment.	Percentage in School.
Abbeville	12,282	3,078	25.0	22,522	6,125	27.0
Aiken	18,907	4,221	22.7	22,862	5,982	27.2

Spartanburg	57,048	13,838	23.4	26,417	7,442	28.1
Sumter	10,246	2,297	22.4	23,226	7,777	27.6
Union	14,439	4,600	31.1	15,472	5,338	34.5
Williamsburg	14,411	3,597	26.0	23,215	5,522	23.7
York	22,331	5,198	23.2	25,387	7,352	28.9
	679,162	160,830	23.7	836,298	193,440	23.1

This table contains many surprises. It will be noted that of the entire white population of South Carolina 23.7 per cent. were enrolled in school last year; of the negro population, 23.1 per cent. were enrolled. Including both races, 23.4 per cent. of the entire population were enrolled in school last year. In Alabama 20.2 per cent. of the entire population were enrolled in school; in Virginia 19.1 per cent.; in New Jersey 16.8 per cent.; and in Wisconsin 19.7 per cent. These figures are made up from reports which happen to be at hand. The Counties, too, show remarkable disparities. There are Counties in South Carolina in which almost one-third of the entire population were enrolled in school last year, according to reports made by the district trustees to the County Superintendents of Education and by them reported to the State Superintendent. I am afraid this is too good to be true. Any enrollment in South Carolina which exceeds 22 per cent. of the entire population of the County should be subjected to a very close scrutiny. The County School funds are apportioned among the districts on the basis of enrollment. Accuracy in these figures is just as important a matter as honesty in the financial accounts of the Superintendents. It is nonsense to apportion money on data which is accepted without verification and then require strict accuracy in the account of its expenditure. These matters should receive the earnest attention of the County Superintendents and the school trustees of the State. We cannot afford anything which has even the appearance of dishonesty in an institution which trains our children for citizenship. The temptation to pad the rolls and thereby secure an unfair advantage to the school district is another argument in favor of committing the distribution of the three-mill tax to the County Board of Education as suggested in a previous paragraph.

During the past year 223 districts have either levied a special tax or increased a levy already in force. Of the 1901 school districts 927 now levy a special tax.

IX. SCHOOL ATTENDANCE.

An inspection of the summaries of the State Superintendent showing the average daily attendance in the public schools reveals one of the principal defects in our system. On my visits to the schools all over South Carolina during the first three months of the current session I have rarely found more than 30 per cent. of the annual school enrollment in actual attendance. In many cases this failure to send the children to school

does not mean indifference to education on the part of parents, but is one of the disastrous results of our system of farming. Christmas Day will find thousands of bales of cotton still in the fields in South Carolina. We cannot reasonably expect the children to enter school as long as the family resources are yet unharvested in the fields. The gathering of the cotton crop is a long and tedious process. A corn and grain crop is easily harvested. The present low prices of cotton have thoroughly impressed upon us the disastrous economic results of a bumper cotton crop. We have not duly considered the educational importance of diversified farming. As long as cotton keeps our children out of school until the first of January it is a curse at any price. The children in other sections of the United States have been in school since the middle of September. We cannot hope to raise a generation which will compete with them under a system of farming which from its very nature keeps our children in ignorance. If the people of South Carolina will increase the corn and grain acreage and will plant a cotton crop which can be gathered by November 1st, we will have more money and will not be compelled to sacrifice our children. Let us hope that the perfection of the Cotton Picker will soon enable us to set ourselves free from the incubus of ignorance.

There are thousands of children in South Carolina to whom parental ignorance, indifference, and greed are denying even the simplest rudiments of an education. No parent has the right to condemn his children to be "hewers of wood and drawers of water" when opportunities are freely offered by the State. South Carolina should vouchsafe all her children a fair chance and a square deal in the race of life.

X. REPORT OF MISS LEILA A. RUSSELL, SUPERVISING TEACHER FOR RURAL SCHOOLS IN YORK COUNTY.

"Rock Hill, S. C., Dec. 2, 1911.

Mr. W. K. Tate, Columbia, S. C.

My Dear Mr. Tate: I respectfully submit the following report of the year's work in supervising the rural schools of York County.

In planning my work I have two general aims in view—improvement in the work of the schoolroom, and increased interest in the schools on the part of the people.

A recent bulletin from the Illinois State Normal University says: "The greatest single need for the improvement of country life at the present time is for a corps of properly trained country teachers who will go forth into our existing country schools and through vitalized teaching and tactful social leadership convert them into living centers for the instruction of both children and adults and the complete upbuilding of country community life." To help meet this need in York County I have visited sixty-four school communities, representing forty-one of the fifty school districts. Twenty-six of these schools I have visited twice and eight I have seen three times or more. Upon the occasion of a visit to a school I have discussed organization of work and classification of pupils with the teachers. I have observed them teach and taught for them. I have sometimes made outlines of work in phonics, number, and history. I have written and sent to each teacher a bulletin of suggestions for seatwork, opening exercises, oral work in language and geography. In addition to this I have sent out a number of helpful bulletins issued by the Agricultural Department at Washington. Through the courtesy of Col. E. J. Watson, our Commissioner of Agriculture, I supplied each school with a map of South Carolina.

To encourage professional study among the teachers a reading circle was organized in each township. These circles were to meet once a month and discuss not only the text book they proposed to study, but also some of the problems confronting them daily in their class rooms. I proposed to attend as many of these meetings as possible. However, this plan on the whole, was a failure. The teachers did not attend the meetings. Of the nine circles organized only two really did any work. I believe there should be monthly teachers' meetings and that trustees should require their teachers to attend. Patrons will, I think, gladly furnish the teachers with a means of transportation to and from these meetings, if asked to do so.

A County Teachers' Association was organized last January and four very successful meetings have been held. Early in the fall of 1910 I began planning for a County School Exhibition and each teacher was requested to make an exhibit of the work done by the pupils. Later the executive committee of the Teachers' Association suggested that we have the exhibition in April and that we have contests in arithmetic, spelling, recita-

tions, and athletics. This plan was adopted and the people of Rock Hill very kindly contributed \$60.00 to be used in defraying expenses and for prizes. This meeting, held April 15, was attended by at least 1,200 people in spite of the fact that the rain came down in torrents. The exhibit of handwork, maps, and exercises in English, arithmetic, and history was very creditable. This meeting helped to vitalize the work of the teacher and did much to stimulate the general public.

The publicity given the work through the four County papers has aided greatly. Numerous articles on various phases of the work have appeared in these papers.

In response to a number of letters and newspaper articles addressed to the trustees, patrons, and teachers of the County, about thirty-five or forty people from various sections assembled on June 1st at the Graded School building in Yorkville and a County School Improvement Association was organized. Through this organization several local associations have been formed. They have made no formal report, but good work is being done by some of them. Four of these associations have raised about \$500 and invested it in the schools represented.

A meeting of this County School Improvement Association and the County Trustees' Association was called for October 20, to be held at Rock Hill. At this time there was an exhibit made of school furniture, including a desk, a table, a ventilating stove, a dustless sweeper, a water cooler, etc. A good school equipment was on exhibition, and, by means of photographs, improvements in school grounds and buildings were shown. Classes were at work in Manual Training, Domestic Science, and Domestic Art. Mr. O. J. Kern, Superintendent of Education of Winnebago County, Illinois, addressed the meeting, showing improvement in schools through consolidation. The exhibition was made again on October 21 when the Teachers' Association and the Home Institute met. The boys of the Corn Club made an exhibit, as did the boys' and girls' club of the County. The specimens of handwork, of bread, jelly, butter, chickens, and corn were fine. Mr. Kern addressed this meeting also, and in the afternoon Hon. J. E. Swearingen gave the teachers an earnest, instructive talk.

The week following these meetings Mr. Kern went out into the County with me and gave a stereopticon lecture at six different places. This educational campaign cost over \$200.

President D. B. Johnson engaged Mr. Kern to lecture before the student body of Winthrop College and paid \$75 toward securing him. To raise the balance I resorted to various measures—entertainments, private subscriptions, etc.

In interest of better school buildings, consolidation of schools, and local taxation numerous meetings have been held. The outlook is, indeed, encouraging. Had it not been for a technicality in the law three schools would have been consolidated at Ebenezer in district 32. At Smith's Turnout two very weak schools have been united and a school house built. The children of the Mt. Gallant School in district 7 are being transported at the expense of the public school fund over to the Experimental Rural School on Winthrop College campus. This transportation costs the district \$35 per month. Thus it is we have one wagon running in York County. Smyrna, Catawba Junction, and Sharon have each put up good school buildings within the last eight months. The latter place has a \$6,000 four-room brick building; the others have nice two-room frame houses. Oak Ridge in district 1 has an excellent new \$1,500 one-room house. Here the trustees have bought a piano, a jacketed stove and built sanitary outbuildings. In the fall of 1910 there were 22 school districts voting special taxes. There are now 38.

It has not seemed wise to concentrate work on any group of schools during the past year, but I am now visiting Oak Ridge and Friendship every Monday. Manual Training has been introduced and I am taking some of the seniors from Winthrop College out with me to these schools.

Very truly yours,

LEILA A. RUSSELL."

The above report is respectfully submitted,

W. K. TATE,
State Supervisor Elementary Rural Schools.

CHAPTER IV.

Report of High School Inspector.

STATE HIGH SCHOOLS.

To the State High School Board.

Gentlemen: I submit herewith my fifth annual report of the high schools of the State.

GROWTH OF THE HIGH SCHOOLS IN FIVE YEARS.

Your attention is first directed to the material growth of the high schools since 1906, the time at which a general movement was inaugurated looking toward their improvement. Nearly every feature of this growth has been pronounced and permanent.

EXHIBIT 1.—SHOWING NUMBER OF HIGH SCHOOLS.

1906-1907 95*	1907-1908 128	1908-1909 154	1909-1910 166	1910-1911 167
------------------	------------------	------------------	------------------	------------------

*Some of these were really not high schools, and have not since been so regarded.

EXHIBIT 2.—SHOWING NUMBER OF HIGH SCHOOL TEACHERS.

Year.	Full Time.	Part Time.	Total.
1906-1907	160	75	235
1907-1908	189	90	279
1908-1909	273	76	349
1909-1910	355	84	439
1910-1911	376	90	466

EXHIBIT 3.—SHOWING HIGH SCHOOL ENROLLMENT BY YEARS.

Year.	First Year.	Second Year.	Third Year.	Fourth Year.	Fifth Year.	Sixth Year.	Total.
1906-1907	4,812
1907-1908	2,556	1,629	666	212	40	35	5,168
1908-1909	3,114	2,086	1,189	164	41	37	6,631
1909-1910	3,526	2,613	1,566	250	42	43	8,030
1910-1911	3,648	2,664	1,788	440	29	35	8,540

EXHIBIT 4.—SHOWING PUBLIC HIGH SCHOOL SALARIES.

1906-1907 (?)	1907-1908 \$146,028	1908-1909 \$194,622	1909-1910 \$246,002	1910-1911 \$273,085
------------------	------------------------	------------------------	------------------------	------------------------

The fact that the number of high schools for the year 1910-1911 is but one in excess of the number for the year previous is a healthful indication. Our need now is not more high schools, but a better distribution and the development of those we have. The steady increase in the teaching force and in the salaries points to decided growth in efficiency. The total teaching force would be ample to guarantee far better results, were it possible to distribute it economically, but under present conditions such a distribution is impossible. Salaries are yet entirely too meager to attract and to hold the quality of teaching so necessary to making the schools what they ought to be and might be.

RECORD OF THE YEAR.

EXHIBIT A.—SHOWING CLASSIFICATION OF HIGH SCHOOL TEACHERS.

Men.	Women.	College Graduates.	Partial College Education.	High School Education.

*These schools offer more than one curriculum; no single student may have all these units to his credit.

STANDARD HIGH SCHOOL UNITS.

SUBJECT	TOPICS	UNITS
English	1 Higher English Grammar and Grammatical Analysis	1
	2 English Composition and Rhetoric	1
	3 Critical Study of Specimens of English Literature	2
Mathematics	1 Algebra to Quadratic Equations	1
	2 Algebra—Quadratics, Progression, and Binominal Theorem	$\frac{1}{2}$
	3 Advanced Algebra, including Permutations and Combinations, Determinants and Numerical Equations	$\frac{1}{2}$
	4 Plane Geometry	1
	5 Solid Geometry	$\frac{1}{2}$
	6 Plane Trigonometry	$\frac{1}{2}$
Latin	1 Grammar and Composition, or First Book	1
	2 Caesar, Books I-IV	1
	3 Six Orations of Cicero	1
	4 Vergil's <i>Æneid</i> , first six books	1
	5 Cornelius Nepos, first fifteen Lives, or equivalent in Ovid	1
History	1 Greek and Roman History	1
	2 Medieval and Modern History	1
	3 English History	1
	4 American History and Civics	1
Science	1 Physiography, with field and laboratory work	1
	2 Experimental Physics	1
	3 Physiology, with laboratory work	$\frac{1}{2}$
	4 Inorganic Chemistry, with laboratory work	1
	5 Botany, with laboratory work	1
	6 Zoology	1
	7 Commercial Geography (Robinson)	1
Greek	1 Grammar and Composition	1
	2 Xenophon's <i>Anabasis</i> , Books I-IV	1
German	1 Half of Elementary Grammar, and 75 pages reading	1

The minimum time in which one unit of work may be done is five weekly recitations of 40 minutes each for 36 weeks, or a minimum total of 120 hours of 60 minutes.

High School Conferences.—During the year conferences of high school teachers were held at Florence, Anderson, Spartanburg, Denmark, Laurens, Rock Hill, Orangeburg, Bennettsville, and Leesville. The majority of the schools within thirty miles of these places readily adjourned their high school classes to give their teachers the opportunity to attend. The local boards throughout the State gave very hearty support to the conferences. In a few meeting places the citizens threw open their homes to the visiting teachers. The following is a summary of the attendance: High school teachers 258, grade teachers 37, college professors 18, county superintendents 7, trustees 10, total 330.

At each meeting one day and one evening were given to informal discussions of a few vital topics connected with high school aims, organization, and teaching. No addresses or set papers were permitted, but every moment of the time was given to real conference—debating questions of importance. The spirit and the enthusiasm of the teachers in these meetings were admirable, and it would be difficult to overestimate the value accruing to those present. A noticeable number of schools have already incorporated into their work practical suggestions made in these conferences.

Improved High School Programs.—To reconstruct a program of studies without doing sudden violence to it requires insight, foresight, and time. The rebuilding of a course from the bottom to the top at one time is always attended with loss. It is better to strengthen the weak points while retaining the stronger parts of the frame-work. The frequent change of teachers, especially principals, greatly retards the development of good courses of study. In many cases either the need of improvement is never discovered or those responsible are unable to effect the needed change.

Your attention is invited to the wide difference between the ratings of schools with practically the same outward conditions and the same equipment. For instance, one principal is able to construct a 3-year program to be taught by himself and one assistant, making a credit of perhaps 11 units; another principal identically situated fails to construct and teach a program making a credit of 9 units. The former is able to articulate his work in such a way as to prevent gaps and overlappings and loss of time and energy, while the latter is not. Here is one of the

distinct differences between an effective organizer and one who is not. In making these comparisons conditions must be practically identical. The principal with inadequate teaching force in the elementary school must not be pitted against one with it; nor must the 8-month school be expected to accomplish as much as the 9-month school.

THE OUTLOOK.

It is wholly within the reach of the people of this State to develop within a few years a system of secondary schools unsurpassed anywhere. Common sense, unselfishness, patriotism, and perseverance will give us the victory. The plan of campaign is a simple one: Build 100 first-class four-year high schools distributed economically over the State, put into these schools a sufficient number of first-class teachers, and keep the pupils in these schools.

Consolidation.—Common sense admonishes us to abandon our folly of essaying to maintain a lot of little struggling, starving, so-called high schools that are standing in the way of something better. Local pride and local jealousies have conspired to open and to maintain scores of little high schools which have no logical excuse for existence. What possible defense can be given for maintaining four public high schools within two miles of the State Capitol in Columbia? A consolidation of these high schools would give all concerned a far better school than any one of them now is or can be alone. As the situation now is, at least two of these schools are hard put to for enough pupils to meet the high school law. As I pointed out a year ago, the same irrational and wasteful policy is found in Laurens County. Cross Hill, Mountville, and Waterloo form a triangle whose center is not more than $2\frac{1}{2}$ miles from each of these places. Here a central high school of fully 75 pupils might be conducted. Instead, the people of these three villages prefer to run a struggling school in each. Tatum runs a one-teacher high school with barely 15 pupils within three miles of McColl. Numerous similar instances might be cited.

If communities choose to waste their money on small and inferior high schools, they may be permitted to continue their ill-advised course, but certainly the State is not warranted in encouraging such a course by granting bounties from the State treasury. Most of the State-aided one-teacher high schools fail

to provide sufficient teaching force for the grades below the high schools.

Ambitious One-Teacher High Schools.—To any one familiar with school organization it would seem useless to argue against one high school teacher's undertaking to teach a three-year program, that is, 8th, 9th, and 10th grades. Yet, nearly every one-teacher high school in the State essays to have a three-year course. Any teacher who will sit down to make a daily schedule of recitations for three high school grades will soon realize the absurdity of one teacher's undertaking a three-year course. He will find that at best he can give any one of his grades but two hours a day to be divided up among the several recitations of a grade. It ought to be self-evident that one teacher cannot do as much work as two. It is wholly inexcusable to mislead the pupils of such a school into believing that they are in a school of standard grading. If they go to college, they are sure to be disappointed at their rating. During the summer of 1911 a considerable number of students from these so-called three-year high schools met just such disappointment. One teacher should not be permitted to undertake more than the 8th and 9th grades.

Would-be High Schools.—In the realm of education many things seem to play strange tricks, else we see them through strange glasses. Colleges blossom into universities, high schools suddenly turn to colleges, and the country school of 25 pupils ranging from the primer class to three lads and lasses wrestling with *x* and *mensa*, is metamorphosed into a high school. Should the one teacher be a man, he is by local courtesy called "professor."

Seriously, many of our two-teacher country schools, and not a few one-teacher schools, are doing a gross injustice to themselves and to their pupils by undertaking high school subjects. The sooner such schools are required to confine their efforts to elementary work, certainly not beyond the 8th grade, the better for the country children. No local board or county board should permit one teacher to undertake work beyond that grade. If the first eight grades were properly taught, using the time now dissipated on so-called high school work, pupils at the end of the eighth school year would be better educated than they now are at the end of the so-called 10th grade. For one teacher, or for two teachers, to talk about teaching a ten-grade school would be amusing, were it not a serious matter with the pupils. When

a teacher dissipates a day's time over five grades, to say nothing of ten, not a pupil is really taught. To show to what absurd extremes these one-teacher schools go, let one instance suffice: There is now (December 1, 1911,) one teacher conducting a country school of about 30 pupils in which she has both a Latin class and a French class!

Higher Standards for High School Teachers.—The quality of the high school teaching is slowly advancing, but not as it should. Surely the time has come to demand of a high school teacher more scholarship than is guaranteed or asked for in a County examination in this State. Other States about us have found it necessary to require higher qualifications of high school teachers. We are requiring teachers to stand tests in elementary work, then permitting them to teach secondary work. Men and women are teaching ancient history, physical geography, plane and solid geometry, physics, and other high school subjects on examinations in arithmetic, political geography, United States history, and English grammar. Such a practice is absurd, and the children are the sufferers.

Teacher-Training Courses.—A careful study of the situation will convince any open-minded person that to get college trained teachers for even a respectable percentage of the rural schools is an idle dream. Very properly more and more money is being put into the rural schools, and yet more will be put into them. But money is not perhaps their greatest need. Certainly they need efficient teachers as much as they need money. From what source are they to come? My candid conviction is that they must be prepared by means of teacher-training courses in the best high schools. Nearly one-third of the States of the Union are now supporting such courses. These courses should be one year in length and added only to good four-year high schools. To permit anything less would not give the necessary scholarship. This fifth year's work could be given by one teacher at a cost of \$900 to \$1,000. The State would be amply repaid for the small appropriation necessary to conduct a dozen such schools. In this instance the rural communities would reap almost the entire benefit. It is scarcely necessary to add that such a course would be of little value without actual teaching practice by those taking the course.

High School Law Defective.—I can not refrain from calling attention once more to one of the defects of the high school law—the unwise and harmful discrimination against a certain

class of high schools. No more blatant demagoguery was ever preached than that which fosters the disruption of the ties of a homogeneous people. If our State is ever to achieve that eminence which we profess to believe is hers, it must come through the united efforts of a united citizenship; it will never come through jealousy and suspicion and selfishness. If we are to develop a school system, that system must be the fruitage of co-operation and justice. The State is presumably engaged in building better schools for all the children of the State wherever they may be. The insignificant high school appropriation could not support the high schools of the State; it is used simply as a stimulus. Yet, because of their population twenty-five places in the State and 3,223 white children (37 per cent.) can not be reached, notwithstanding the fact that these same places contribute \$84,638.12 of their school taxes to other communities.

This discrimination against the larger places might be defended, were it true that they would be getting money which is needed in smaller places, or that the high school appropriation in order to meet all would be exorbitant. However, neither is true; in fact, every year some part of the present appropriation is turned back into the State treasury.

College Standards.—It is demonstrable by figures and facts that most, if not all, the colleges of this State have materially advanced their actual requirements for admission during the past five years. Yet, these requirements have not been so much advanced as the popular mind believes, nor so much as the friends of some of the colleges insist. Any one in a position to know the facts needs no argument to be convinced that some of these colleges can not fill their classes with students able to meet, on a legitimate valuation of their credits, the colleges' advertised requirements. The students are not in the State—at least they are not in college. Of course, some well-prepared students come from outside the State; on the other hand, some students from outside the State come poorly prepared. Of the students coming from outside South Carolina, Converse College gets nearly one-third.

The preparation of the students entering our colleges is not a matter of conjecture or of guess work but a matter of record. Through the High School Inspector's office can be traced the records of 95 per cent. of all the high school pupils (public and private) of the State with a *bona fide* credit of six units and over. Exhibit 11 of this report contains only a small fraction of the total pupil record roll for 1910. Thirteen of the nineteen colleges of the State give their student rolls by years, and it is an easy task to appraise the preparation of their recruits from year to year. Six of the colleges (all for girls) do not give their student rolls by years, but there are at least two safe methods by which their recruits can be appraised. Any one who cares to take the time can easily calculate the preparation of the students going to college.

College preparatory departments have greatly aided in giving improved preparation for admission to the college classes. Fourteen of the nineteen colleges of the State have such departments on the college grounds. But, after all, these preparatory departments are not revolutionizing the situation. Let the college catalogs speak for themselves. How many of these preparatory departments have a *bona fide* four-year high school course resting on even a seven-year elementary course? How many pupils enter any one of these departments from good seventh grades and remain in the preparatory department four years before entering college? How many of these preparatory departments are giving 120 60-minute hours (what they demand of the high

schools) to each unit of credit in this preparatory work? In short, how many of them are not holding out the somewhat proverbial inducement to their pupils to "save a year?"

With a genuine desire to improve at least the quantity of the preparation coming to them, several of our colleges have adopted the practice of admitting students considerably below their published requirements with certain "conditions." These conditions are usually stated in units and in number run from 1 to 4. Now, a unit of preparation requires 120 60-minute hours of recitations. Suppose two students, A and B, enter X college; A without conditions, and B with four units of conditions. Several pertinent questions arise: 1. Does X college promise to exact of B 480 60-minute hours of preparatory work before graduation in addition to his college work? If not, is the college ingenuous? 2. Does the college expect B to graduate with A? If so, one of two things must be true—either the college course has not sufficient work for A or it has too much for B, granting that both are normal students. The very conditions on which the two are admitted are illogical, the one least fitted is required to do the most in a given time. I appreciate fully the honest and well-meant desire of the college to help the high school situation, but I cannot convince myself that the means are the best. In the first place this plan does not give so wholesome a stimulus to the local high schools as might otherwise be given. Everywhere students are refusing to remain for the fourth year in the home high school, saying with truth that they can enter college at the end of the third year and "save a year" by so doing. Now, how is the college saving a year unless it admits that one of its years is simply high school work or that the regular college course has not in it sufficient work to engage a student for four years? To my mind it would be far better to both the college and the high school to insist upon the pupil's remaining in the high school through four years, then when he comes up to college have there a four-year college course ahead of him or give him advanced standing in at least part of his work. It is useless to say that this plan would not foster four-year high schools all over the State. Wherever the colleges have demanded a reasonable and possible advance in the preparation and consistently held to their demands they have received a response from the people. The college cannot hope for a steady flow of prepared students save from the permanent high schools scattered through the State.

A NEEDED REFORM.

Modern society looks more and more to the State for protection against wrong and injustice. The State has undertaken to do for the individual what he can not do for himself. The State undertakes to protect its citizens against unwholesome food and against swindling insurance schemes launched for the purpose of defrauding the ignorant. Why should not the State take the same position in regard to educational institutions? The State at present charters an institution of learning to do business on the endorsement of the State, then leaves the institution to deal with the people as it sees proper, without any effort whatever to protect its citizens against the most flagrant fraud in the sacred name of education. Honest citizens, anxious to educate their children but not experts in the field of education, pay their taxes or their tuition fees to institutions doing business on the credit of the State, yet the State gives absolutely no protection to its citizens. No one can with authority pass upon the merit of the work done in any of these institutions. Until the State inspects and classifies the education given or sold to its citizens with as much care as it inspects the meat or milk given or sold its citizens, it is not doing its duty. Benzoate of soda in education should be branded with as much emphasis as in tomato sauce. Whenever an institution offers its wares to the public the State should label the wares. No institution doing legitimate work could offer the least objection to such a course. The real colleges would welcome with delight any such measure.

Respectfully,

WILLIAM H. HAND.

CHAPTER V.

**Directory of School Officers, Receipts and
Disbursements of the Office of
State Superintendent
of Education.**

DIRECTORY OF SCHOOL OFFICERS, RECEIPTS AND DISBURSEMENTS OF THE OFFICE OF STATE SUPERINTENDENT OF EDUCATION.

J. E. Swearingen, State Superintendent of Education.

J. A. Stoddard, Assistant State Superintendent.

Miss Lidie Garlington, Stenographer.

STATE BOARD OF EDUCATION.

Governor Cole. L. Blease, *ex-officio*, Chairman.....Columbia.

Superintendent J. E. Swearingen, *ex-officio*, Secretary, Columbia.

First District—D. M. O'Driscoll, Principal, Bennett School,
.....Charleston.

Second District—H. F. Rice, Attorney at Law.....Aiken.

Third District—D. W. Daniel, Professor of English.....

.....Clemson College.

Fourth District—A. G. Rembert, Professor of Greek, Wofford College.....Spartanburg.

Fifth District—J. L. Glenn, Attorney at Law.....Chester.

Sixth District—Nathan Toms, Superintendent of City Schools.....Darlington.

Seventh District—A. J. Thackston, Superintendent of City Schools.....Orangeburg.

COUNTY SUPERINTENDENTS OF EDUCATION.

Abbeville—J. Foster Hammond, Abbeville.

Aiken—C. H. Seigler, Aiken.

Anderson—R. A. Abrams, Anderson.

Bamberg—R. W. D. Rowell, Bamberg.

Barnwell—H. J. Crouch, Barnwell.

Beaufort—B. H. Boyd, Hardeeville.

Berkeley—C. W. Sanders, Monck's Corner.

Calhoun—D. S. Murph, St. Matthews.

Charleston—E. P. Waring, Charleston.

Cherokee—E. S. McKown, Gaffney.

Chester—W. D. Knox, Chester.

Chesterfield—Kirby Rivers, Chesterfield.
 Clarendon—E. J. Browne, Marming.
 Colleton—H. W. Black, Walterboro.
 Darlington—T. E. Stokes, Darlington.
 Dillon—R. S. Rogers, Dillon.
 Dorchester—John J. Howell, St. George.
 Edgefield—W. W. Fuller, Edgefield.
 Fairfield—T. M. Jordan, Winnsboro.
 Florence—A. H. Gasque, Florence.
 Georgetown—Josiah Doar, Georgetown.

Seventh District—A. J. Thackston.. . . .	167.90
	<hr/>
	\$1,000.00 \$1,000.00

(NOTE). In consequence of the text-book adoption the June session of the Board was longer than expected. Two extra meetings were required in July to complete this adoption and to settle the controversy growing out of the refusal of the B. F. Johnson Company to sign and deliver its contract for the Third, Fourth and Fifth Books of the basal series of readers.

The appropriation was exhausted with the August meeting, making the deficiency for the year about \$300.00. Since the State Superintendent of Education could not legally exceed the appropriation, claims will be submitted by the several members of the Board through the Comptroller General's office. These services have been rendered, and it is hoped that the claims will be paid.

Eighty-two buildings in thirty-two counties.—State appropriation \$20,000.00. Total value of new buildings \$208,514.34.

PUBLIC SCHOOL LIBRARIES.

Appropriation, \$5,000.00.

This fund is paid out by the State Superintendent of Education in \$5.00 and \$10.00 amounts. Checks are mailed to the County Superintendents to be deposited with the County Treasurer, and warrants to cover all library claims are issued by the County Superintendent for the benefit of the respective schools.

To December 20, payments for libraries aggregated \$1,195.00. The State Board of Education also appropriated \$3,000.00 of the unexpended library balance to be awarded in prizes by the South Carolina School Improvement Association. Checks covering these awards were mailed to County Superintendents on December 19.

**PRIZES AWARDED FOR SCHOOL IMPROVEMENT AS REPORTED BY THE PRESIDENT OF
THE SCHOOL IMPROVEMENT ASSOCIATION.**

Note.—Many cities and towns have issued municipal bonds whose proceeds have been used for school purposes. Some of the amounts contained in this report are of this kind, but many issues of this nature were omitted in the reports from the several counties.

The data concerning bonds are difficult to secure, because permanent records are seldom kept.

SUMMARY 11.—RECAPITULATION.

Public Schools—White: Town, 259; country, 2,312; State, 2,672. Negro: Town, 219; country, 2,182; State, 2,401.

Public Schoolhouses—White, 2,399; negro, 1,777. Total, 4,176.

Private Buildings Used for Public Schools—White, 154; negro, 609. Total, 763.

Value of Schoolhouses and Grounds—White, \$3,109,023.56; negro, \$438,713.08. Total, \$3,547,741.63.

Value of School Equipment—White, \$315,318.38; negro, \$95,414.13. Total, \$380,732.51.

Buildings receiving State aid during the year, 82.

White Teachers—Men, 831; women, 3,424. Total, 4,255.

Negro Teachers—Men, 812; women, 1,940. Total, 2,752.

White Enrollment—

Town: Boys, 31,170; girls, 32,421. Total, 63,591.

Country: Boys, 49,176; girls, 48,063. Total, 97,239.

State: Boys, 80,846; girls, 80,484. Total, 160,830.

Negro Enrollment—

Town: Boys, 18,712; girls, 23,713. Total, 42,425.

Country: Boys, 69,006; girls, 82,009. Total, 151,015.

State: Boys, 87,718; girls, 105,722. Total, 193,440.

Average Attendance—White—

Town: Boys, 21,820; girls, 24,335. Total, 46,155.

Country: Boys, 30,192; girls, 31,006. Total, 61,198.

State: Boys, 52,012; girls, 55,341. Total, 107,353.

Average Attendance—Negro—

Town: Boys, 12,904; girls, 16,565. Total, 29,469.

Country: Boys, 43,905; girls, 54,302. Total, 98,207.

State: Boys, 56,809; girls, 70,867. Total, 127,676.

Average Number of Pupils to School—White, 60; negro, 80.

Average Number of Pupils to Teacher—White, 33; negro, 70.

Total School Revenues—\$2,517,091.00.

Expenditures—White, \$1,818,678.81; negro, \$349,834.60. Total, \$2,168,513.41.

Total Balance on hand July 1, 1911, \$348,577.68.

Average Salaries Paid Teachers—

White: Men, \$562.13; women, \$290.02.

Negro: Men, \$182.73; women, \$98.53.

Average Expenditures Per Pupil—White, \$12.62; negro, \$1.71; both races, \$5.96.

Average Weeks Session—

White: Town, 32; country, 23; State, 24.

Negro: Town, 22; country, 13; State, 14.

Number of districts in State, 1,901.

Number of districts levying special tax, 927.

Number of districts not levying special tax, 974.

Number of districts voting or increasing levy during the year, 223.

Districts with outstanding school bonds, 115.

Amount of outstanding school bonds, \$1,516,937.48.

Certificates Issued During the Year—

White: Men, 190; women, 678. Total, 868.

Negro: Men, 110; women, 322. Total, 432.

Institutions of Higher Education—White, 30; negro, 11. Total, 41.

Accredited Colleges—White, 20; negro, 9. Total, 29.

Number of High Schools accepted for State aid, 128.

Number of other High Schools, 39.

Number of four-year High Schools, 38.

Number of High Schools making fourteen units, 21.

Enrollment in High Schools, 8,640.

Total college enrollment reported, 3,627.

CHAPTER VIII.

Reports of State Institutions.

ANNUAL REPORT

OF THE

BOARD OF TRUSTEES

OF THE

University of South Carolina

TO THE

General Assembly

FOR THE

Scholastic Year Ending June 30, 1911

REPORT.

University of South Carolina,
Columbia, S. C., Nov. 15, 1911.

Hon. J. E. Swearingen, State Superintendent of Education, Columbia, S. C.

Dear Sir: I have the honor to submit the following report of the University of South Carolina for the scholastic year ending June 30, 1911. The number of students enrolled was 416, as follows:

Graduate Students..	29
Literary Students..	126
Scientific Students..	65
Special Students..	50
Civil Engineering Students	29
Teacher Students..	73
Law Students..	48
	<hr/>
	420
Counted twice..	4
	<hr/>
Total..	416

For the present session, 1911-12, there have been already enrolled 421. The health of the students has been good and the order excellent.

The faculty have been united in every way, and have shown themselves efficient both as teachers and as publicists, desiring to advance the interest of all the people of the commonwealth.

A comparative statement of the students of the University since 1907 is as follows:

1908..	278
1909..	298
1910..	340
1911..	415
1912 (Nov. 15, 1911)..	421

HOW MEN EARN AND LEARN.

During the past session there were many students at the University of South Carolina who worked their way in whole or in part. These young men number about one out of every ten; at times the ratio has been one in seven. In this are not counted those who have received aid from the Alumni Loan Fund or have held scholarships.

These men are among the best students at the University, and are held in esteem by their fellows. The position a young man holds in the student body depends entirely upon his personal worth.

For two years the University has been making special efforts to help young men who have to work; the first step towards an organized bureau of student self-help, under the direction of Dr. E. L. Green, has been taken. The last session's report to the Trustees at their meeting in June showed that nearly \$4,000 had been earned by forty students. If all who were working could have been listed, both the amount and the number would have been much larger. Law students, for instance, had no mention. Money earned in vacation was also not counted. Columbia offers many opportunities to the man who has to make his way; the business men of Columbia have helped most gladly and effectively.

ALUMNI LOAN FUND.

Since the inception of the Alumni Loan Fund of the University of South Carolina in 1905, about \$6,800 has been contributed by the general body of the Alumni. To this should be added about \$1,600 contributed by the class of 1885. Nearly \$11,000 has been loaned to students, and some 115 separate students have received aid from the fund. Not more than \$100 is loaned to any one student in any one year. The amount borrowed is loaned to the student without interest during the time that he is in college, though interest is charged at the rate of 6 per cent. from the time of graduation and leaving college until the loan is repaid. Of the amount loaned to students rather more than \$5,000 has been returned.

The trustees of the Alumni Loan Fund are August Kohn, Edwin G. Seibels, Lewis W. Parker, Francis H. Weston and McIver Williamson.

The above figures speak volumes both as to the loyalty of the alumni and as to the promptness with which students have refunded the sums advanced. There are at present many worthy young men, full of promise, who are having a hard struggle to maintain themselves in the University. Some in their brave fight are actually cooking their own meals, so as to save every penny and thus be enabled to remain in college. Yet these same men will some day reveal power in public affairs, so great is their ability.

FLINN HALL.

A marked feature of the University at the present time is the intensifying of the moral and religious forces in the life of the student body. Through the efforts of the students themselves the Y. M. C. A. now possesses a large and convenient building known as Flinn Hall. It has been so named in honor of Dr. J. William Flinn, who was for seventeen years a professor in the University. Through his care and foresight during the years quite a nice sum was collected, with a view to securing—such was the original plan—a permanent home for the Y. M. C. A. However, in the spring of 1909 the Board of Trustees decided to set apart the present building for the use of the Association, and the money which had been collected by Dr. Flinn was applied towards furnishing it. The building contains tastefully furnished parlors, reading rooms, writing and committee rooms, guest room, office, and, indeed, everything pertaining to the social and religious life of the University. The privileges of Flinn Hall are open to all members of the University without charge.

A PERMANENT Y. M. C. A. SECRETARY.

Mr. W. P. Mills, an alumnus of the University, and former Rhodes scholar at Oxford, England, is in charge of the moral and religious life of the students of the University, devoting his whole time and energy to this one task. The students give their enthusiastic support to his work in their own behalf, and Flinn Hall is really the center of gravity of college life.

During the summer Mr. Mills compiled a Students' Handbook of the University, which was issued at the opening of the college and distributed among the students with the compliments of the Y. M. C. A., and contained all information as to the customs and activities of the college, as well as thoughtful advice to the new

students. The object of this little volume was to extend to all students a warm welcome to the University; to give to the new men suggestions and information as to the campus life; and to urge all to take as large a share as possible in whatever promotes the upbuilding of Carolina.

Dr. W. D. Weatherford held a series of religious meetings last spring, with a view to deepening the spiritual life of the young men. These were largely attended, and productive of lasting good.

NEEDS OF THE UNIVERSITY.

A new dormitory is a crying need of the University. It has been sixty-three years since a dormitory was erected on the Campus. At that time (1848) the number of students in the institution was 221. Nearly twice this number will be enrolled the present session. Every inch of available space has been used for dormitory purposes. Sometimes four men have had to be put in rooms intended for only two students. Many young men will be debarred the privilege of attending the University unless more sleeping rooms are provided for them. Rooms for at least one hundred (100) men should be provided at the earliest possible moment.

CENTRAL HEATING PLANT.

A central heating plant was erected two years ago, and is now equipped with boiler and everything ready to turn on steam. But the steam conduit from the central heating plant has not as yet been run to a single building on the Campus. The power house and the equipment have, therefore, been absolutely useless. In order to make the heating plant of any service whatever to the University, it is necessary to lay down the steam conduit. The completion of this power house will economize the cost of fuel, lessen risks of fire and add to the comfort and neatness of all the buildings on the Campus.

EXTENSION LECTURES FOR COMMUNITIES THROUGHOUT THE STATE.

Until very recently Universities throughout the country required people to come to them for the benefits they offered, but more and more the Universities are going to the people. The University of South Carolina desires to do its share as a part of

the public school system of the State, in advancing the interests of its schools and in furthering the intellectual growth of its people. To that end, and in response to the widespread demand for the advantages of higher education outside of the colleges, the following general lectures are offered.

The purpose of the University Extension Work is to promote the fullest intellectual life of all the citizens of the commonwealth, and to reinforce moral causes that have to do with the welfare of our State. The University seeks to broaden the horizon of those who have not had the advantages of a college education, and to afford an opportunity for those who have attended college to keep in touch with academic thought along their favorite lines.

While the professors of the University ask no compensation in seeking to promote by such lectures the educational and cultural interests of the communities, it is expected that the communities will bear the traveling expenses. Schools, organizations, communities and individuals interested are requested to address the particular professors whose lectures are desired.

PROFESSOR L. T. BAKER:—

1. The Theatre as a Religious and Educational Agency.
2. The Education of Women: Past and Present.
3. Old and New Conceptions of Physical Education.
4. Education for Citizenship in Ancient and Modern States.
5. Schools of the Nineteenth Century in South Carolina.
6. The University and the State.

PROFESSOR FRANCIS W. BRADLEY:—

1. German Student Life.
2. The German Peasant.

PROFESSOR A. C. CARSON:—

1. Wave Motion.
2. The Solar Spectrum.
3. Electricity and Magnetism.

PROFESSOR L. P. CHAMBERLAYNE:—

1. Buried cities of Crete. (Illustrated.)
2. A Visit to Greece. (Illustrated.)

PROFESSOR F. HORTON COLCOCK:—

1. Why and How the Federal Government Should Build Roads.
2. The Economic Reasons for Expert Supervision in Road Building.
3. Astronomy: Man's Nearest Touch with the Wonders of the Divine Creator. (Illustrated.)
4. The Aesthetics of Mathematics.
5. Mathematics: The Ease of its Mastery .When Taught Right Early.

PROFESSOR HENRY C. DAVIS:—

1. English, a Living Language.
2. Beowulf, The Early English Epic.
3. Provincialisms and Present Tendencies in South Carolina Speech.
4. Mark Twain: The Man and the Humorist.
5. Edgar Allan Poe: The Poet.
6. Edgar Allan Poe: The Master of the Short Story.
7. Making the Sentence Structure Tell the Truth. (For High School Classes.)

PROFESSOR ELBERT D. EASTERLING:—

1. The Picture Side of Mathematics. (For Teachers' Meetings.)
2. Are the Planets Inhabited?
3. The Consolidation of Rural Schools.

PROFESSOR EDWIN L. GREEN:—

1. Helen of Troy. (Illustrated.)
2. Pompeii. (Illustrated.)

PROFESSOR W. H. HAND:—

1. Education as an Investment.
2. Getting a Correct Vision of Life.
3. Industrial Education: Its Importance and Its Place.
4. The Value of a High School to a Community.

MR. W. P. MILLS:—

1. Student Life at Oxford. (Illustrated.)
2. Palestine. (Illustrated.)
3. The Problem of the South. (Illustrated.)*

*This lecture treats of the social and economic conditions of the Negro in the South, and our duty in view of the facts.

DR. J. E. MILLS:—

1. Applied Chemistry in Our Homes and Industries.

PROFESSOR GEO. McCUTCHEN:—

1. Co-operation Among Farmers.
2. The Petroleum Industry—a Study in the Problem of Monopoly.
3. Robert Owen, Social Reformer.

PRESIDENT S. C. MITCHELL:—

1. The Prophet of the Nineteenth Century.
2. The Foremost Figure in the French Revolution.
3. Martin Luther.
4. The First Martyr of Intellectual Liberty.
5. The Moral Mission of America.
6. Rome. (Illustrated.)

PROFESSOR A. C. MOORE:—

1. The Typhoid Fly.
2. The Mosquito as a Carrier of Disease.
3. Bacteria as Friends and Foes.
4. Plant Breeding.
5. The Trees of South Carolina.

PROFESSOR JOSIAH MORSE:—

1. Education and Citizenship.
2. Psychology in Crime and Court. (Illustrated by Experiments.)

PROFESSOR E. M. RUCKER:—

1. The Two Greatest Events in History.
2. The Lawyer: His Part in Our Life.

PROFESSOR REED SMITH:—

1. Realism and Romance: The Twin Interests of Fiction. (A Study in the Novel.)
2. Tone Color in Words: The Soul of Speech.
3. The Four Lost Years: A Plea for a Liberal Arts Education.
4. Popular Etymology.

PROFESSOR W. K. TATE:—

1. The Master Teacher and His Method.
2. Rural School Conditions and Tendencies in South Carolina. (Illustrated.)
3. Some Rural Schools in Ontario, Minnesota and Iowa. (Illustrated.)
4. Nature Study and Agriculture in Rural Schools. (Illustrated.)

PROFESSOR MAYVILLE W. TWITCHELL:—

1. Picturesque America. (Illustrated.)
2. Volcanoes and Earthquakes. (Illustrated.)
3. Glaciers and the Ice Age. (Illustrated.)
4. Gold and Diamonds. (Illustrated.)
5. Animals of the Past. (Illustrated.)

PROFESSOR PATTERSON WARDLAW:—

1. The New Life of the School.
2. The Reasonable Man.
3. Sunday-School Teaching in the Light of Child-Study.
4. The Simplifications of English Spelling.
5. The Reorganization of Grammar Teaching.

***PROFESSOR GEORGE A. WAUCHOPE:—**

1. William Shakespeare in Stratford and London (Illustrated.)
2. Wordsworth and the English Lake Country. ((Illustrated.)
3. The World's Most Famous Pictures. (Illustrated.)
4. South Carolina Literature and Its Makers.
5. The Story of the Making of Our English Bible.
6. Alfred Tennyson, Poet-Spokesman of Victorian England.
7. The Education that is Worth While.

*To Teachers' Associations, Literary Clubs, or other groups desiring a series of monthly lectures, Dr. Wauchope offers also three courses of five lectures each on South Carolina Literature, Robert Browning, and the Development of the Short Story in the South.

EXTENSION WORK AWAY FROM THE UNIVERSITY.

1. A course of lectures on the Pedagogy of the Sunday School is being given by Prof. Patterson Wardlaw at the Columbia Theological Seminary.

2. A course in Physical Culture is being given by Prof. J. Bruce Coleman at the Olympia Mill Young Men's Christian Association.

3. A course of lectures is to be given at the Olympia Mill Y. M. C. A., in which ten of the professors of the University will take part.

4. Prof. William H. Hand, in his capacity as State inspector of high schools, visits the various high schools of the State, and advises in regard to the best methods of carrying on the work.

5. Prof. W. K. Tate, as State inspector of rural schools, traverses the State and assists in the improvement of rural school conditions.

6. • Prof. M. Goode Homes, as special agent of the bureau of public roads, United States Department of Agriculture, is acting in the capacity of Consulting Highway Engineer, and giving advice in regard to the proper location and construction of roads throughout the State.

7. Prof. M. W. Twitchell, as State Geologist, visits the various mines and quarries of the State and gives advice in regard to the development of mineral properties, water supply problems, etc.

CORRESPONDENCE COURSE IN ENGLISH.

By Prof. Henry C. Davis.

A correspondence course in English which varies in character from year to year, intended primarily for the teachers of South Carolina. The plan of the course is practical and helpful. The fee for the year is \$5.00. Applicants should address Prof. Henry C. Davis, University of South Carolina, Columbia, S. C.

NIGHT CLASSES.

- Course 1. Elementary Spanish—By Prof. O. L. Keith, Monday nights.
- Course 2. Elementary German—By Prof. F. W. Bradley, Wednesday nights.
- Course 3. Architectural Design—By Mr. J. Carroll Johnson, Friday nights, (with extra drawing work outside the hour.)

LATIN FOR TEACHERS.

By Dr. E. L. Green.

This is a course in Latin intended primarily for teachers. The class has been formed and is reading Cicero's orations against Cataline, making use of the exercise and composition book adopted by the State Board of Education.

THE TEACHING OF ENGLISH GRAMMAR.

By Dr. Edward S. Joynes.

A course of lectures on the teaching of English Grammar, with special reference to the characteristics of the English language. This course is designed especially for teachers, or persons preparing to teach, but is open to all, without charge.

POPULAR LECTURES.

Thursday Night in the Chapel.

- Lecture 1. Nov. 9th—"Psychology in Crime and Court," by Prof. Josiah Morse. (Illustrated by Experiments.)
- Lecture 2. Nov. 16th—"Some Rural Schools of Ontario, Minnesota and Iowa," by Prof. W. K. Tate. (Illustrated.)
- Lecture 3. Nov. 30th—"German Student Life," by Prof. Francis W. Bradley. (Illustrated.)
- Lecture 4. Dec. 14th—"Nelson vs. Napoleon," by Pres. S. C. Mitchell. (Illustrated.)
- Lecture 5. Jan. 25th—"Palestine," by Mr. W. P. Mills, Executive Secretary of Flinn Hall. (Illustrated.)
- Lecture 6. Feb. 29th—"Forms of Humor and Nonsense," by Prof. Henry C. Davis.
- Lecture 7. Mar. 7th—"The Creation of New Plants," by Prof. A. C. Moore. (Illustrated.)
- Lecture 8. Mar. 21st—"Applied Chemistry in our Homes and Industries," by Prof. J. E. Mills.
- Lecture 9. Apr. 4th—"Roman Architecture," by Prof. L. P. Chamberlayne. (Illustrated.)
- Lecture 10. Apr. 11th—"Aviation," by Prof. A. C. Carson. (Illustrated.)

COURSE II. THE DEVELOPMENT OF THE SHORT STORY IN THE SOUTH.

By Dr. G. A. Wauchope.

Saturday, 12-1, Room 14, Davis College.

- Lecture 1. The Short Story and Literary Conditions before 1835.
- Lecture 2. Edgar Allan Poe's Contribution to the Short Story.
- Lecture 3. The Southern Humorists from 1835 to 1860:
Longstreet, Baldwin, Thompson, Hooper, Harris.
- Lecture 4. The Short Story in South Carolina before 1860:
Simms, King, Nott, Gilman.
- Lecture 5. The Period of Transition—1860-1870:
Harland, Cooke, Reid, Bagby.
- Lecture 6. The Southern Literary Renaissance: Stories of
"Cracker" Life:
Johnston, Edwards, Harben, Crim.
- Lecture 7. Stories of Creole Life:
Cable, King, Chopin, Harrison.
- Lecture 8. Negro Dialect Stories:
Harris, Page, Bonner, Edwards, Boyle, Stuart.
- Lecture 9. The Mountaineer Story:
Craddock, Bonner, Fox, McClelland, Harris, Harbin.
- Lecture 10. Other Stories of Southern Life and Character:
Page, Burnett, Harrison, Eggleston, Rives, Baylor, Allen, Smith, Elliott, Stuart, Peck, Seawell, Magruder, McCants, Daniel, Waring.

BULLETINS OF THE UNIVERSITY.

As a further part of its work in University extension, the following Bulletins have been issued by the University during the present year, any of which may be had without charge on application:

- 1. Bulletins—No. 22, July, 1910: Part I, High School Reports.
No. 22, July, 1910: Part II, School of Law: Announcement, 1910-11, and Address of Hon. R. Withers Memminger.
No. 23, October, 1910: Part I, The Graduate School.
No. 23, October, 1910: Part II, Opportunity and Duty.

No. 24, January, 1911: Part I, Report of High School Inspector, 1909-1910.

No. 24, January, 1911: Part II, A Statement of the Rural School Problem in South Carolina.

No. 24, January, 1911: Part III, Some Legislative and Educational Needs of the Mill Villages.

No. 25, April, 1911: Part I, Catalog, 1910-1911.

No. 25, April, 1911: Part II, How the Sunday School Can Assist in Village Welfare Work.

No. 26, July, 1911: Founders' Day.

No. 27, October, 1911: Participle and Infinitive in —Ing.

II. University Extension Courses.

III. Directory of University of South Carolina, 1910-1911.

IV. Normal Scholarships for Men.

FACULTY AND OFFICERS.

The following is a list of the professors and officers, with salaries as fixed for the session 1911-12:

President S. C. Mitchell.....	\$3,500	and house, no light or fuel
Dean A. C. Moore.....	2,500	and house, no light or fuel
Prof. W. B. Burney.....	2,000	and house, no light or fuel
Prof. F. H. Colcock.....	2,000	and house, no light or fuel
Prof. Patterson Wardlaw	2,000	and house, no light or fuel
Prof. G. A. Wauchope.....	2,000	and house, no light or fuel
Prof. Yates Snowden	2,000	and house, no light or fuel
Prof. M. W. Twitchell	2,000	and house, no light or fuel
Prof. L. T. Baker.....	2,000	and house, no light or fuel
Prof. A. C. Carson.....	2,000	and \$300 commutation
Prof. O. L. Kelth.....	2,000	and \$300 commutation
Prof. L. P. Chamberlayne.....	2,000	and \$300 commutation
Prof. E. L. Green.....	2,000	
Prof. Geo. McCutchen	2,000	
Prof. Josiah Morse	2,000	
Prof. J. P. Thomas, Jr.....	1,700	
Prof. J. N. Frierson.....	1,700	
Prof. E. M. Rucker.....	1,700	
Prof. H. C. Davis.....	1,500	
Prof. Reed Smith	1,500	
Prof. E. D. Easterling.....	1,500	
Prof. M. G. Homes.....	1,500	
Prof. J. B. Coleman.....	1,200	
Inst. F. W. Bradley.....	1,000	
Inst. R. F. Bradley, Jr.....	600	
Inst. A. V. Parrott.....	550	
Dr. F. A. Coward, Lecturer.....	300	
Dr. J. E. Mills, Lecturer.....	300	
Mr. W. P. Mills, Y. M. C. A. Secretary	1,000	
Miss M. H. Rion, Librarian.....	975	
Miss E. D. English, Asst. Librarian..	600	
J. D. Brandenburg, Asst. Librarian...	270	
Miss E. C. Bauer, Cataloguer.....	200	
Miss S. F. Fickling, Treasurer.....	1,200	
Miss J. Heyward, Stenographer.....	480	
Jas. G. Driver, Physical Director....	1,200	
M. C. Dyches, Superintendent Grounds and Buildings	900	
Mrs. A. Madden, Matron Infirmary...	600	
Night Watchman	600	
Miss E. T. Swaffield, Prac. School....	90	
Miss A. J. Selby, Prac. School.....	90	
Miss E. C. Thomas, Prac. School....	90	
W. W. Wharton, Bell-ringer.....	75	
S. P. Schneider, Mail Clerk.....	75	
Prof. W. H. Hand.....	100	and house
Prof. W. K. Tate.....		\$300 commutation

Total.....\$55,505 \$1,200

Salaries of professors and officers for last session, as follows:

President S. C. Mitchell.....	\$3,500	and house, no light or fuel
Dean A. C. Moore.....	2,000	and house, no light or fuel
Prof. W. B. Burney.....	2,000	and house, no light or fuel
Prof. F. H. Colcock.....	2,000	and house, no light or fuel
Prof. Patterson Wardlaw	2,000	and house, no light or fuel
Prof. G. A. Wauchope.....	2,000	and house, no light or fuel
Prof. Yates Snowden	2,000	and house, no light or fuel
Prof. M. W. Twitchell	2,000	and house, no light or fuel
Prof. L. T. Baker	2,000	and house, no light or fuel
Prof. G. B. Moore.....	2,000	and house, no light or fuel
Prof. A. C. Carson	2,000	and \$300 commutation
Prof. O. L. Kelth	2,000	and \$300 commutation
Prof. L. P. Chamberlayne.....	2,000	and \$300 commutation
Prof. E. L. Green	2,000	
Prof. J. P. Thomas, Jr.....	1,700	
Prof. J. N. Frierson	1,700	
Prof. E. M. Rucker	1,700	
Prof. Geo. McCutchen	1,500	
Prof. H. C. Davis	1,500	
Prof. Reed Smith	1,500	
Prof. E. D. Easterling	1,200	
Prof. M. G. Homes.....	1,200	
Inst. J. B. Coleman	800	
Inst. F. G. Potts.....	800	
Inst. Park Powell	800	
Inst. A. V. Parrott.....	400	
Dr. F. A. Coward, Lecturer.....	300	
Miss M. H. Rion, Librarian.....	975	
Miss C. H. Porcher, Asst. Librarian..	720	
Miss E. D. English, Cataloguer.....	350	
Miss S. F. Flickling, Treasurer.....	1,000	
Miss Julie Heyward, Stenographer...	480

Prof. W. K. Tate.....		\$300 commutation
<hr/>		
Total.....	\$51,765	\$1,200

The University receives from the General Education Board \$3,000 on account of salary and traveling expenses of a professor of Secondary Education. Mr. W. H. Hand receives \$1,900 of this sum on account of his salary, the University paying the additional \$100.

Prof. W. K. Tate's salary of \$3,500 is paid jointly by the Southern Education Board and the Peabody Board.

The Treasurer's report, giving an itemized statement of the receipts and disbursements for the scholastic year ending June 30, 1911, is hereto attached.

Respectfully submitted,

S. C. MITCHELL, President.

UNIVERSITY OF SOUTH CAROLINA REPORT OF THE
TREASURER FOR THE SCHOLASTIC YEAR,
JULY 1, 1910, to JUNE 30, 1911.

Receipts.

Balance of appropriation for 1910	\$43,461 64	
Part of appropriation for 1911	49,801 28	
Fees:		
Tuition	\$5,291 50	
Term	5,079 50	
Diploma	141 00	
		10,512 00
Light and janitor service (students)	1,934 00	
Lights (professors)	294 00	
Infirmary board	269 55	
Miscellaneous receipts	51 58	
General Education Board	3,000 00	
Southern Education and Peabody Boards	3,950 00	
Balance from last scholastic year	7,316 10	
		<hr/>
Total receipts	\$120,590 15	

Expenditures.

Salaries:	
S. C. Mitchell, President	\$3,500 00
A. C. Moore, Dean of the University and Professor of Biology	2,416 64
W. B. Burney, Professor of Chemistry	2,000 00

ANNUAL REPORT

OF THE

BOARD OF VISITORS

OF

THE CITADEL

The Military College of South Carolina

FOR THE

Academic Year

1910-1911

Report of Chairman of the Board of Visitors of The Citadel.

November 1st, 1911.

*Hon. J. E. Swearingen, State Superintendent of Education,
Columbia, S. C.*

Dear Sir: I have the honor to submit as follows the annual report of the Board of Visitors of The Citadel, The Military College of South Carolina, for the year ending June 30th, 1911.

The total number of students enrolled for the year was 256, distributed among the classes as follows:

First Class, graduated June 28th, 1911, thirty-two members.

Second Class, thirty-nine members.

Third Class, seventy members.

Fourth Class, one hundred and fifteen members.

Of the total number, sixty-eight were Beneficiary Cadets supported in whole by the State, six were City Scholarship Cadets supported by the City of Charleston, and one hundred and eighty-two were Pay Cadets.

The following table shows the Cadets holding State and City Scholarships, with the date of graduation:

During the past summer the two vacancies in the Charleston City scholarships were filled by competitive examination as follows:

CHARLESTON CITY SCHOLARSHIPS.

A. E. Nimitz.

G. W. Walker.

Eighty-nine per cent. of the entire enrollment were Cadets from South Carolina, but the following States were represented: Alabama, 2; Bahama Islands, 1; Florida, 5; Georgia, 6; North Carolina, 6; New Jersey, 1; New York, 4; Tennessee, 1, and Virginia, 1. Total, 27.

In the corps of the present year, fifteen new Cadets have matriculated from other States: Alabama, 2; Georgia, 3; Kentucky, 1; Louisiana, 1; North Carolina, 4; New Jersey, 1; New York, 1; Tennessee, 1, and China, 1. Total, 15.

The percentage of South Carolina Cadets in the present corps is 89.

CHANGES IN THE FACULTY.

The Board of Visitors, during the summer, elected Mr. D. W. Berky, of the University of Pennsylvania, as assistant Professor of Physics.

BOARD OF VISITORS.

Col. C. S. Gadsden, Chairman, Charleston, S. C. (term expires 1916).

Col. J. J. Lucas, Society Hill, S. C. (term expires 1912).

Col. W. W. Lewis, Yorkville, S. C. (term expires 1916).

Maj. E. M. Blythe, Greenville, S. C. (term expires 1912).

Orlando Sheppard, Esq., Edgefield, S. C. (term expires 1914).

EX-OFFICIO.

His Excellency, Coleman L. Blease, Governor, Columbia, S. C.
Gen. W. W. Moore, Adjutant and Inspector-General, Columbia, S. C.

Hon. J. E. Swearingen, State Superintendent of Education, Columbia, S. C.

Hon. W. J. Johnson, Chairman Military Committee, Senate, Ridgeway, S. C.

Hon. W. W. Dixon, Chairman Military Committee, House of Representatives, Winnsboro, S. C.

FACULTY.

Col. O. J. Bond, Superintendent.

First Lieutenant W. St. J. Jervey, Tenth Infantry, U. S. A.,
Commandant of Cadets.

Maj. St. James Cummings, Professor of History and English Literature.

Maj. R. G. Thomas, Professor of Mathematics and Engineering.

Capt. John W. Moore, Professor of Political Science.

Capt. Louis Knox, Professor of Chemistry.

Capt. L. S. LeTellier, Professor of Drawing.

Capt. L. F. Hildebrandt, Professor of French and Spanish.

Capt. A. L. Hodges, Professor of Physics.

Capt. C. A. Graeser, Professor of French and German.

First Lieutenant C. L. Hair, Assistant Professor of Mathematics.

First Lieutenant S. J. Williams, Assistant Professor of English.

First Lieutenant D. W. Berky, Assistant Professor of Physics.

Capt. Henry E. Raines, Quartermaster.

Dr. R. S. Cathcart, Surgeon.

Miss Inez B. Parry, Librarian.

Mrs. J. P. Chapman, Matron of Mess Hall.

Miss F. J. Gasque, Matron of Hospital.

Chief Musician E. S. Ensey, First Band, Artillery Corps, Band Instructor.

ACADEMIC DEPARTMENT.

The standard of scholarship continues to be maintained, and the requirements for admission are as strict as the condition of our common and high school system seems to warrant. While admission at The Citadel is not based upon a system of units, it has been found from an inspection of the certificates submitted by the Freshmen of this year, that the average number of units offered would be about 10. The difficulty which has been experienced at The Citadel with candidates for admission is that they are not thoroughly prepared in the elementary branches. A considerable number of candidates every year show a lack of proficiency in Arithmetic, Elementary Algebra, English Grammar and Composition, History of the United States, and Descriptive Geography. Students coming from some of the best high schools, and who have advanced much beyond these requirements, are frequently as deficient as others in these essential branches. This lack of preparation will largely account for the great number of deficiencies which occur in our Freshman class. Last year out of 115 Cadets in this class, only 53 made the required average at the end of the year. The casualties in the higher classes were not so large, there being only one in the First Class; five in the Second Class, three of which were for deficiency; but there was a large number in the Third Class, 28.

The following tables show in brief the course of studies at the college, with the number of hours of class-room work in the various departments. It should be noted that for three years the studies required are the same for all Cadets. In the senior year, ten hours per week are allowed in elective work in any one of four courses, Engineering, English, Chemistry and Physics.

FIRST YEAR—FOURTH CLASS.

Mathematics, five hours a week, nine months. Stone-Millis Higher Algebra; Well's Plane and Solid Geometry.

Physics, four hours a week, nine months. Wentworth & Hill's Elements of Physics; laboratory work.

English, four hours a week, nine months. Hitchcock's Composition and Rhetoric; English Classics.

History, two hours a week, nine months. Wolfson's Ancient History.

French, three hours a week, nine months. Fraiser and Squair's French Grammar; Reader.

Military Science, one hour a week, nine months. Infantry Drill Regulations, U. S. Army.

Total hours a week, 19.

SECOND YEAR—THIRD CLASS.

Mathematics, five hours a week, nine months. Crockett's Plane and Spherical Trigonometry; Davie's Surveying, with Field Practice; Theory of Equations.

Chemistry, four hours a week, nine months. McPherson & Henderson's Exercises in Chemistry; Elementary Study of Chemistry by the same authors.

English, four hours a week, four and one-half months. Select English Classics; Creighton's Logic.

History, four hours a week, four and one-half months. Harding's Mediæval and Modern History; Andrew's England.

French, three hours a week, nine months. Fraiser and Squair's Grammar completed; French Texts.

Drawing, three hours a week, nine months. Anthony's Mechanical Drawing; Topographical Drawing.

Military Science, one hour a week, nine months. Guard Manual, U. S. Army; Firing Regulations for Small Arms.

Total hours a week, 20.

THIRD YEAR—SECOND CLASS.

Mathematics, five hours a week, nine months. Smith and Gale's Plane and Solid Analytic Geometry; Taylor's Differential and Integral Calculus; Lectures on History and Philosophy of Mathematics.

Physics, four hours a week, nine months. Duff's Physics; Weber's Problems in Electricity. Laboratory work.

English, four hours a week, six months. Arden Edition of Shakespeare; Johnson's English and American Literature; Lectures; Winchester's Literary Criticism; Essays.

History, four hours a week, three months. Hart's Formation of the Union; Wilson's Division and Reunion.

German, three hours a week, nine months. Vos' Essentials of German; Reader.

Drawing, three hours a week, nine months. Anthony's Machine Drawing and Design.

Military Science, one hour a week, nine months. Field Service Regulations. Map Reading and Sketching. Infantry Drill Regulations.

Total hours a week, 20.

FOURTH YEAR—FIRST CLASS.

Engineering (elective), ten hours a week, nine months. Integral Calculus; Analytic Mechanics; Hydromechanics; Mechanics of Materials; Roofs and Bridges; Elements of Sanitary Engineering; Drawing; Use of Surveying Instruments; Lectures on Roads and Pavements.

English (elective), nine hours a week, nine months. Extensive reading of Classic English Prose at the rate of 2,000 pages a month, minimum; Analysis by Cadets; Lectures on Literary Forms; Original Orations; Shakespeare's Dramas, with Lectures on Dramatic Poetry; Literary Study of the English Bible, with examination of the Biblical Literary Form, and extensive reading of the Modern Reader's Bible; and Fullerton's and Alden's Intellectual Philosophy. Lectures on Teaching and Study.

Physics (elective), ten hours a week, nine months. Electricity and Magnetism; Electrical Measurements; Laboratory work.

Chemistry (elective), ten hours a week, nine months. Treadwell's Analytical Chemistry; Alex Smith's General Inorganic Chemistry. Dennis & Whittlesey's Qualitative Analysis; Moses and Parson's Mineralogy.

Political Science, three hours a week, nine months. Lauchlin's Political Economy; State and Federal Constitutions; Davis's International Law. Cooley's Constitutional Law.

German (elective), three hours a week, nine months. Vos' Grammar, completed; Pope's German Composition; German Texts.

Spanish (elective), three hours a week, nine months. Hill's and Ford's Spanish Grammar; Reader; Spanish Texts.

Military Science, two hours a week, nine months. Beach's

Military Engineering; Dudley's Abridgment of Military Law; Practice of Court's Martial. Drill Regulations.

Geology, two hours a week, nine months. Morton's Geology.

Bookkeeping and Commercial Law, two hours a week, nine months.

Total hours a week, 21.

MILITARY INSPECTION BY THE WAR DEPARTMENT, U. S. A.

It gives me pleasure to report that the high military reputation of the institution has been maintained. As a result of the inspection by the U. S. War Department, the report of which is appended, The Citadel again takes rank in the class of distinguished institutions, one of whose graduates receives a commission in the U. S. Army. Cadet Captain G. D. Murphay, who graduated in June, was recommended for a commission and has been accepted by the U. S. Army.

REPORT OF AN INSPECTION OF THE MILITARY DEPARTMENT OF THE CITADEL.

At Charleston, Charleston County, South Carolina, made April 10, 1911, by Captain B. T. Simmons, General Staff.

1. Is this institution essentially a military school, or is the military instruction merely a single feature of the course? Essentially military.

2. What degree of importance is attached to the military instruction by the faculty? Great.

3. Is any change in the War Department classification desirable? No.

4. If not already classified, what classification should be made? Now Class A.

5. Is the officer on duty at the college cordially supported by the faculty in the matter of military instruction and discipline? Give explicitly your reasons for arriving at this conclusion. Yes. (Statement of Lieutenant Jervey and my own observation.)

6. Are the students required to be continuously in uniform, and do they lead, as far as the surrounding conditions can reasonably be expected to permit, a military life? In other words, are the conditions such as to impress them constantly with a sense of being under military discipline? Yes.

7. To what extent is a military spirit developed and nurtured? Great.

8. With what degree of zeal is military duty performed? Very good.

9. What was the general appearance of the Cadets at inspection? Excellent.

10. Have the requirements of par. 27, G. O. 231, W. D., 1909, as to time allowed the military department been fully complied with? Yes.

11. Have the requirements of par. 28, G. O. 231, W. D., 1909, as to the course of instruction been complied with? Yes.

12. Is the efficiency in infantry instruction and training sufficiently advanced to warrant devoting time to instruction in artillery or other branches? Yes, but not recommended.

13. Is the military instruction of such extent and thoroughness as to qualify the average graduate for a commission as a lieutenant of volunteers? Yes.

14. Personally interview the students of the graduating class reported as having shown special aptitude for military service, and state your opinion as to their qualifications so far as you can ascertain the same from suitable questions in the course of conversation with them. Endeavor to form a general idea as to their fondness for military life, the extent of their military and historical reading, and their general intelligence, neatness and good manners. Do not report them individually, but give your impression of these selected Cadets as a whole. They are intelligent, neat and

well mannered. They have good command, and impressed me very favorably.

15. Is the military professor eligible for this detail? (Pars. 14 and 16, G. O. 231, W. D., 1909.) Yes.

16. Is he satisfactory to the college authorities? Yes.

17. Is the retired non-commissioned officer on duty at this institution satisfactory? None.

18. Do the conditions warrant the continuance of the detail of an officer as professor of military science and tactics at this institution? Yes.

GENERAL REMARKS.

I inspected 184 Cadets organized into a battalion of five companies and a band. The music of the band is very good. The Cadets are well set up and neat and present a military appearance. All that were questioned were found to be well instructed in the nomenclature of the rifle. There were two rusty rifles at inspection. One Cadet stated that he had used sand in cleaning his rifle.

The Cadets were in camp on the State Rifle Range near Charleston, and were having field exercises and their annual target practice. The tents were well pitched and ditched and the ground in the vicinity of the tents well policed. All refuse is burned or hauled away. The messing arrangements in camp were very good.

The members of the guard understand and properly performed guard duty.

Company drills in close order, squad drills by the corporals, battalion close order drills (the senior Cadet captain commanding), guard mounting, escort of the color and battalion parade, marching and alignment, were excellent.

Company and battalion drills in extended order, very good. The battalion under the senior Cadet Captain made an attack which was well executed and showed a knowledge of the use of cover.

Outpost duty is fairly well understood. The battalion made a short march with an advance guard properly formed.

Three Cadets sent and received messages with flags quickly and correctly.

Standing gun drill with 3.2" rifles, good. The barracks, which were not occupied at the time of inspection, are well arranged and in good condition, and the hospital was in excellent condition.

The Cadets have had practical instruction in intrenching. The military instructor has given 24 hours theoretical instruction in field engineering and 25 hours in military law to the members of the first class.

The members of the faculty and Cadets of the first class sit as members of courts-martial for the trial of Cadets, following the procedure prescribed in the manual for courts-martial.

There is daily guard mounting and guard duty throughout the school year. Guard, morning and sick reports are submitted daily.

B. T. SIMMONS.

Captain General Staff Corps Inspector.

The annual encampment of the Corps of Cadets was held at the Range of the National Guard, a few miles above the City of Charleston, from April 1st to 15th, and was one of the most successful in the amount of military work and instruction given which has ever been held. The time was devoted exclusively to military work, consisting of guard duty in camp, field maneuvers, practice marches, military engineering, and target shooting. In the latter considerable exercise was given all the Cadets in rifle shooting at 100, 200 and 600 yards, and a picked squad of 24 were afterwards given a special competitive shoot for a medal offered by Mayor R. Goodwin Rhett, of the City of Charleston. This medal was won by Lieut. J. F. Risher, of the First Class. The practice of target shooting is considered so important a part of the military education of the Cadets that this feature of the encampments will be made permanent.

The Commencement Exercises were held in the City of Charleston, the Baccalaureate Sermon being delivered by Rev. T. M. Hunter, of Baton Rouge, La., an alumnus of The Citadel in the class of 1890, and the annual address by Dr. James P. Kinard, of Winthrop College, a Citadel graduate of the class of 1886. On this occasion a ring was presented by Dr. John O. Willson, President of Lander College, to Cadet Captain T. S. Sinkler, Jr., who was adjudged by vote of his classmates to be the "manliest, purest and most courteous member of his class." Announcement was also made that a medal would be offered annually by the Class of 1890 to that student of the corps who will show the greatest proficiency in Athletics, and a Mathematical medal would also be presented by Mr. W. C. Heath, of Monroe, N. C., of the Class

of 1886, to be awarded annually to the member of the Fourth Class showing the greatest proficiency in Mathematics.

The "Star of the West" medal for the best drilled Cadet was awarded to Cadet Sergeant Thomas Richardson; and the "Marksman's" medal for the best record in shooting to Cadet Corporal J. C. Hutson.

Diplomas were awarded by Col. J. J. Lucas, Acting Chairman, to 31 Cadets of the Senior Class.

FINANCIAL REPORT.

The Superintendent's annual report of receipts and expenditures submitted herewith shows the institution to be in a healthy financial condition.

The gratifying increase in the amount received from Pay Cadets will be noted. The State appropriates annually \$30,000 for maintenance and for the support of 68 Beneficiary Cadets. Last year the receipts from the Pay Cadets amounted to \$40,851.67. The rapid growth of the school has been in the attendance of Pay Cadets, and it is not expected that it will be necessary to call upon the Legislature for any increased annual appropriation.

During the spring and summer the special appropriation of \$50,000 made by the Legislature in its session in February was expended for the construction of the Meeting Street extension, which completes the equipment of The Citadel so far as buildings are concerned. In this new building are class rooms, armories, gymnasium, officers' quarters, society halls, Y. M. C. A. halls, band room and astronomical observatory. The appropriation made by the Legislature was to be paid from the State Treasury in two installments, \$25,000 in 1911 and \$25,000 in 1912. As the construction of this addition was urgent, the Board of Visitors made arrangements with the Carolina Savings Bank in Charleston to discount their notes for \$25,000, so that the construction of this building could be completed in due time and turned over to the authorities, and it is now serving the purpose for which it was designed.

It is estimated that the value of the building and equipment at the Citadel is in excess of \$300,000, and the Board, at its meeting in June, considered it imperative that the insurance should be increased to at least 40 per cent. of the value of the plant. New insurance for a period of five years, beginning October 1st, has

been taken out on the buildings and property for \$150,000. The premiums amounting to \$2,277.78 have been paid from the funds of the institution and the Legislature will be asked to refund this amount.

The new session opened with an enrollment of 233 Cadets, and I am assured by the Superintendent that all departments of the institution are now working effectively and harmoniously.

The Board asks for the usual appropriation of \$30,000 for maintenance, \$25,000 second installment for Meeting Street extension, and \$2,277.78 for insurance.

Respectfully,

C. S. GADSDEN,
Chairman of Board of Visitors, The Citadel.

Table showing the salaries of the members of the Academic Board:

Superintendent	\$2,500
Commandant of Cadets (no salary paid by the Board of Visitors).	
Two professors at \$1,800	3,600
Six professors at \$1,500	9,000
Two assistant professors at \$1,000	2,000
One assistant professor at \$900	900
Quartermaster	1,500
Surgeon	600
Librarian	600
Adjutant	200
Total	<hr/> \$20,900

Below is given an account of the expenditure of the special appropriation of \$50,000 for the Meeting Street extension:

Simons & Mayrant, Building Contractors	\$40,456 32
Evans, Admirall & Co., extension of heating plant.	3,375 00
Observatory	1,881 36
Architects	2,230 44
Discount	850 83
Tiling, electric fixtures, advertising, furniture for class rooms and Y. M. C. A. halls	1,206 05
Total	<hr/> \$50,000 00

SUPERINTENDENT'S ANNUAL REPORT OF RECEIPTS AND EXPENDITURES, THE CITADEL, July 1st, 1910, TO JUNE 30, 1911.

RECEIPTS.		1910.		EXPENDITURES.

Examined above account and found correct, Charleston, July 12th, 1911.

(Signed) J. E. SMITH.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and the role of the accounting department in ensuring the integrity of the financial statements.

2. It also highlights the need for regular audits and the importance of having a clear understanding of the company's financial position at all times.

3. The second part of the document focuses on the importance of budgeting and the role of the accounting department in preparing and monitoring the budget.

4. It also discusses the importance of having a clear understanding of the company's financial position at all times and the need for regular audits.

5. The third part of the document discusses the importance of maintaining accurate records of all transactions and the role of the accounting department in ensuring the integrity of the financial statements.

6. It also highlights the need for regular audits and the importance of having a clear understanding of the company's financial position at all times.

7. The fourth part of the document focuses on the importance of budgeting and the role of the accounting department in preparing and monitoring the budget.

8. It also discusses the importance of having a clear understanding of the company's financial position at all times and the need for regular audits.

9. The fifth part of the document discusses the importance of maintaining accurate records of all transactions and the role of the accounting department in ensuring the integrity of the financial statements.

10. It also highlights the need for regular audits and the importance of having a clear understanding of the company's financial position at all times.

REPORT

OF THE

BOARD OF TRUSTEES

OF THE

WINTHROP

Normal and Industrial College

OF SOUTH CAROLINA

TO THE

General Assembly

1911

REPORT

Winthrop Normal and Industrial College,
Rock Hill, S. C., Nov. 24, 1911.

Hon. J. E. Swearingen, State Superintendent of Education.

Dear Sir: I have the honor to submit the following report of Winthrop Normal and Industrial College for the scholastic year, July 1, 1910, to July 1, 1911, as required by law.

Winthrop College made much progress during the past year in character of work done, in material equipment, in college spirit and standards, in reputation, and in relating itself more closely to the life of the people served by it. The organization was more satisfactorily adjusted to the larger enrollment, advanced entrance requirements and higher and stronger courses of study put into operation, and features specially bearing upon the home life of the people in both town and country, such as household economics, practice in housekeeping, elementary agriculture and school gardening, strengthened and emphasized. The organization and meeting at Winthrop of the York County Rural and Home Institute for the wives and daughters of the farmers, of the York County Boys' Corn Clubs, of the County Teachers' Association, the gathering together there of some 1,200 school children of York County for academic exercises and athletic contests, the special work of Miss Russell for the rural schools, and the conduct of an experimental rural school at the college have all brought the college and the people closer together and have resulted in benefit to the homes and schools of the people and to Winthrop College. During the past summer a Summer School of four weeks' session, a Rural Life Conference, and a Conference of the County Superintendents of Education were held at Winthrop and a household economics train was run by the college for the benefit of the women of the State in connection with Clemson's agricultural train.

An evidence of the growing reputation of the college and its increasing usefulness is the ever increasing demand for its graduates. The demand is greater every year and it comes from other States as well as from South Carolina. The Superintendent of City Schools of a leading city in North Carolina, in a recent letter asking for recommendation of Winthrop graduates for his primary and grammar grades and high school, adds, "Our experience with Winthrop girls has been good without an exception. We want some more." The Superintendent of Schools of a good

town in South Carolina, in writing for help in securing a teacher, adds, "It might be of interest to you to know that I have nine grade teachers this year and seven of these are Winthrop graduates. Next year I am to have ten grade teachers and I feel sure that nine of them will be Winthrop graduates. . . . All of this information is given to show you how we appreciate the good work Winthrop is doing; also to show the confidence we have in her graduates as teachers."

The College ran smoothly in every department the past year. The students were earnest, conscientious, and diligent in their work, and there was no serious case of discipline.

ENROLLMENT.

The total number of students admitted last year to the College classes during the whole session was 703—486 old and 217 new. The enrollment in the Training School and Kindergarten was 206, making the total number in all departments cared for by the College, 909.

Every county in the State was represented in the enrollment in college classes as follows:

Abbeville	9	Greenwood	28
Aiken	27	Hampton	10
Anderson	40	Horry	6
Bamberg	6	Kershaw	11
Barnwell	12	Lancaster	19
Beaufort	2	Laurens	26
Berkeley	3	Lee	20
Calhoun	7	Lexington	18
Charleston	18	Marlboro	11
Cherokee	7	Marion	5
Chester	29	Newberry	22
Chesterfield	4	Oconee	14
Clarendon	9	Orangeburg	36
Colleton	9	Pickens	12
Darlington	26	Richland	14
Dillon	3	Saluda	7
Dorchester	3	Sumter	15
Edgefield	9	Spartanburg	16
Fairfield	13	Union	8
Florence	14	Williamsburg	9
Georgetown	5	York	97
Greenville	27		

Enrollment in Industrial Studies:

Stenography and typewriting	26
Dressmaking, sewing and millinery	390
Drawing and designing	168
Cooking	354
Elementary agriculture	202
Manual training	346

Enrollment by Classes:

Senior	97
Junior	142
Sophomore	201
Freshman	132
Sub-Collegiate	72
Special	59
	<hr/> 703
Enrollment in Training School (children)	160
Enrollment in Kindergarten (children)	46
	<hr/>
Total	909

Number of Students in Normal Department 639

Number of Students in the Literary Department 5

The average age of the students at the beginning of the session was 18 years, 5 months and 9 days, over three years above the age requirement for admission, which is fifteen.

Of the new students admitted, 172 were from accredited schools. Of all the students enrolled, 360 were graduates of graded and high schools and 57 had taught school.

All of the members of the Senior Class were normal students and all of them had had training in industrial studies.

The regular work of this session was begun in most of the studies without the loss of a day, except the first, which was used for assembling in the chapel, for registration, and for directions, especially to new students. The students were practically all classified by correspondence, and an alphabetical list of the whole student body, giving the class of each student, was printed before the College opened. Examinations for making up conditions, for passing to higher classes, and for passing on foreign languages chosen were held several days before the opening day. The students assembled in the chapel at 10 a. m. on September 20th

for opening exercises, and all students were busy next day with some regular college work.

We have enrolled for this session up to this time 743 students—501 old and 242 new—making the largest enrollment in the history of the College and making Winthrop one of the largest colleges in the South. The enrollment in the Training School and Kindergarten thus far this session is 212, making 955 pupils gathered together at the College every day and cared for by the College.

There were 1,354 applicants for admission to the College last summer, but of this number many were not prepared for college work.

The percentage of old students returning to College has been very large this year. Out of a possible 582 old students who could have returned, 523 applied for re-admission.

Eight graduates of colleges, including the Memminger Normal School, are at Winthrop this session for professional work and post graduate work.

The number of students in the Normal Department receiving professional training for teaching is 673 out of the 743 enrolled.

Every county in the State is represented in the enrollment this year, as last.

Of all the students enrolled, 408 are graduates of high schools and colleges and 66 have taught school.

Two hundred and fourteen of the new students admitted this year are from accredited schools and colleges.

The average age of the students this session, including the Sub-Freshmen, is 18 years, 7 months and 17 days—over two months higher than at this time last year.

From answers to the question concerning the occupation of fathers, it is interesting to note that we have in the College this year the daughters of

259 Farmers.	11 Insurance men.
63 Merchants.	13 Railroad men.
17 Ministers.	15 Lawyers.
24 Physicians.	7 School superintendents,
22 United States, State, county and municipal officers and officials.	teachers and college pro- fessors.
15 Traveling men.	3 Manufacturers.
	2 Cotton buyers.

10 Contractors.	3 Druggists.
7 Presidents or other officers in mills and factories.	2 Laundrymen.
3 Bookkeepers	5 Mechanics.
1 Bank president.	1 Singer.
4 Grocers.	2 Boatmen.
1 Liveryman.	1 Jeweler.
4 Dentists.	1 Plumber.
3 Brokers.	1 Undertaker.
2 Politicians.	9 Engineers.
10 Clerks	2 Cashiers.
2 Office men.	1 Manager of a mine.
1 Surveyor.	1 Miner.
1 Tobacco warehouseman.	1 Cattle inspector.
3 Proprietors of hotels or restaurants.	1 Horse trader.
1 Printer.	1 Electrician.
1 Editor.	2 Express agents.
4 Lumbermen.	1 Manager bottling works.
2 Carpenters.	1 Manager County Dispensary.
1 Photographer.	1 Manager Music House.
	1 Horticulturist.

The students not answering this question have widowed mothers or no parents living.

HEALTH.

The resident physician of the College, who is also sanitary officer, reports that "the College plant in all its branches has been inspected and found in a fine sanitary condition." The health of the student body is usually good, but it has been better this fall than usual.

Every precaution was taken last summer to insure a thoroughly good sanitary condition of the College plant before the teachers and students returned. At the request of the President of the College the State Health Officer, Dr. Haynes, went to the College a few days before the opening and made a sanitary inspection of the College premises, including the dairy. He expressed himself as much pleased with the sanitary condition of everything. The College drinking water was examined by the State Board of Health before College opened and pronounced good, and it is examined regularly through the session. The meal to be used for the dining room is sent to the State Commissioner of Agriculture

for examination. The dining room, kitchen, store room and infirmary are all carefully screened against flies.

The health of the College community is carefully looked after by the resident physician and trained nurse. The attendance of the students upon all their school duties is remarkably regular and very few are compelled to drop out of school on account of sickness.

The students, upon entrance, are given a physical examination by the resident physician and Director of Physical Training. All students needing it are vaccinated at the beginning of the session. Hereafter we shall carry out the State law by requiring a certificate of successful vaccination from every applicant. This should make us safe against a smallpox epidemic or a smallpox panic.

The College physician makes a regular sanitary inspection of the whole College plant and files with the President of the College a report of these inspections every month.

In the inspection of the dairy the form of blank adopted by the United States government is used, and the cows, stables, milk house, milkers, and milking and handling milk are all graded. Out of a possible hundred the last report of the inspector gave the dairy 94, with the note, "Sanitary conditions are excellent".

All students who are physically able are required to take the physical training work provided for in the course of study and to exercise in the open air and sunshine every day when the weather permits. The girls play tennis, basket ball, hockey, baseball, roll ten pins, and take long walks in the woods at intervals in walking clubs. Our many students in elementary agriculture get much good exercise in working their garden plots. We have inaugurated "organized play" for the Training School to teach our students how to carry it on with their pupils when they become teachers, and our students seem to get much pleasure themselves in using the see-saws, swings, traveling rings, etc.

The Infirmary has proved a great blessing to the College, but it is now found to be too small for the enlarged institution. It was built to care for the students of one dormitory. We now have three large dormitories and the number of students is more than twice as large as when the Infirmary was built. It is imperative that the Infirmary be enlarged without further delay, in order that we may be able to look after the health of the students properly and be prepared to handle satisfactorily any epidemic that

might visit the College. It can be made large enough for the needs of Greater Winthrop and provided with much needed modern equipment for \$12,000.00. The State Normal School of North Carolina has abandoned recently is old, out-grown Infirmary and built at a cost of \$45,000.00, a large modern hospital with every convenience for the care of the sick and with ample room to handle any epidemic.

SCHOLARSHIP AND ENTRANCE EXAMINATION.

This examination was held on last July 7th at every county court house in the State in accordance with the law. It served as an entrance examination to the sub-collegiate class, as it has done for the past two years under our advanced entrance requirements, as well as a competitive examination for the award of scholarships. We believe the State is now ready, however, for this examination to be of a more advanced character and to be held for admission to our present Freshman class with its advanced entrance requirements.

There were thirty-two vacant scholarships to be awarded upon the competitive examination. All of them, with one exception, were awarded in the counties to which they belonged. No applicant in Berkeley County passed the examination, and the vacant scholarship for that county was awarded as a scholarship from the State at large to Miss Inez Lomberg, of Beaufort County, who made the highest average on the scholarship examination of all the applicants in the State outside of the regular State scholarship students. No applicant was eligible financially for a scholarship unless pronounced so by the committee of the Board appointed to pass upon this matter.

Miss Hannah Plowden and Miss Katie Gunter, awarded scholarships in Winthrop by the last Legislature for making the greatest amount of corn on an acre of ground and the greatest number of cans of tomatoes, respectively, in a State contest with other young women, have been admitted to the College, although Miss Gunter could not enter any of the college classes and the Legislature did not appropriate any money for the scholarships. Miss Hannah Plowden entered the Freshman class upon examination. Winthrop College has no sources of revenue other than the fees of the students and the appropriations of the Legislature and it is necessary, therefore, for us to ask the Legislature

for money for the support of the two extra scholarships created by it for the College.

Two additional scholarships have been provided for in Winthrop College since the last session of the Legislature—one by Mrs. W. H. Beall, of Sumter County, and named by her the Sumter County Farmers' Union Scholarship, and another by the Greenville Chapter of the U. D. C. These scholarships were awarded upon the competitive examination held last July 7.

These scholarships, in addition to others maintained at Winthrop by individuals and organizations in the State, evidence a gratifying esteem for the College by the people and faith in its work.

The provision in the new scholarship Act passed at the last session of the Legislature making ineligible for a scholarship all applicants who have attended any college or university is proving a hardship to some poor deserving girls. It rules out some of the finest and most worthy young women in the State—those who are willing to come to college and work their way through in the dining room and kitchen. After a girl has worked at Winthrop as a dining room scholarship student she is forever debarred, under the provisions of the new Act, from applying for a State scholarship. A girl who hopes to secure a State scholarship at some time dare not exert herself to enter college without such scholarship, for by doing so she forever debars herself from securing such a scholarship. The enterprising, determined, ambitious, forceful girl who overcomes difficulties, makes a little money, and comes to college for one year in the absence of a vacant scholarship in her county is the very kind who will make the most valuable teacher, and yet she is ruled out by the new scholarship law from any chance of ever receiving any State scholarship aid in completing her education at college. The new law puts a premium on mediocrity and discourages independent, ambitious effort to enter college on the part of any girl who ever expects to secure a State scholarship to help her through college.

OFFICERS AND TEACHERS.

There are now 84 officers and teachers in the College.

Every teacher should realize that he owes it to himself, to his profession, and to the institution engaging his services, to keep abreast of the times in his profession—that money invested in a better preparation for one's professional duties is capital well

invested. Our teachers do realize this and also that more than work in the class room is due from a teacher to his students and his college. Many of our teachers taught and studied in summer schools during the past summer, and some went abroad for travel and study. President Johnson organized and conducted the Winthrop College Summer School; Dr. Kinard, Prof. Hodge, Miss Macfeat, Miss Grant, Miss Dunn and Miss Campbell taught in the Winthrop Summer School; Prof. Thomson taught in the Winthrop Summer School and also in the Piedmont Summer School at Davidson, N. C.; Prof. Tate taught in the Winthrop Summer School, and afterwards continued his work as State Supervisor of rural schools; Miss Withers taught in the Summer School of the South at Knoxville, Tennessee; Mrs. Hetty S. Browne conducted the Rural School for observation during the Winthrop Summer School and afterwards studied at the University of Chicago; Miss Maude M. Isles taught in the Winthrop Summer School and afterwards inspected the summer exhibitions of four of the leading schools in New York City (New York University, Teachers College, School of Applied Design, Miss Seegmiller's classes); Miss Dacus served as Librarian and teacher of Library Methods at the Winthrop Summer School and afterwards studied the methods used in some of the Washington, D. C., libraries; Miss Porter studied French in Paris and attended the extension courses offered by the University of Oxford, England, lectures on German history, literature, and philosophy, social economics, etc.; Miss Whittemore inspected household economics work in Great Britain; Miss Wysor went abroad; Miss Alice Jones went abroad; Miss Martin visited the libraries, museums and social settlements in Paris and London and afterwards took a course in German literature and German economics at the University Extension School, Oxford, England; Mrs. Birdsall studied at Teachers College; Miss Spencer and Miss Hughes did some work at Chautauqua; Miss Moudy and Miss South attended the summer session of the University of California and the annual meeting of the National Education Association; Miss Clark studied at Teachers College; Miss Morrison collected available material in the Rocky Mountains for a herbarium; Miss Russell attended the Summer School of the University of West Virginia; Miss Coleman taught in the Winthrop Summer School and afterwards studied playground organization and management in Washington, D. C.; Misses Schutt, Jenkins and Pawnee Jones took a correspondence

course in theory and harmony of music; Miss Dickson took a correspondence course from the University of Chicago; Prof. Fertig taught in the Winthrop Summer School and afterwards studied at Columbia University.

Believing that an institution supported by a State should render service to that State in helping to build up its vital interests, the school and the home, Winthrop is always seeking opportunities to render this service to South Carolina. Miss Hyde, matron of our Practice Home, accompanied and assisted by members of last year's graduating class, went over the State last summer in charge of the Winthrop College demonstration train sent out in connection with Clemson's agricultural train. This train traveled 2,063 miles, visiting 47 different points and reaching every county in the State except Williamsburg. The Winthrop part of the train consisted of two coaches—one for exhibiting improved household implements and equipment, and the other fitted up with a stove and kitchen furnishings for lectures with demonstrations on cooking. Home sanitation and home making were also the subjects of lectures to the women. It is estimated that about 11,000 women heard these lectures. Miss Hyde gave household economic lectures and demonstrations at the Barnwell County Fair on last October 27th.

Miss Leggett, the new head of our Department of Domestic Science, conducted a cooking school at the Aiken County Fair on November 16th and 17th.

Prof. Niven lectured on elementary agriculture and school gardening at the Winthrop Summer School and afterwards during the summer at farmers' institutes.

Miss Russell, County Supervisor of Rural Schools, assisted by Prof. Niven, arranged for a meeting at Winthrop College, on October 20th and 21st, of the York County School Improvement Association, the York County School Trustees' Association, the York County Boys' Corn Club, and the Rural and Home Institute for both boys and girls. Prizes contributed by the people of the county, amounting to almost \$400.00, were awarded for the best yield of corn, the best pair of chickens, the best bread, the best butter, the best aprons, the best sofa pillow tops, doll clothes, etc. By means of classes at work in Manual Training, Domestic Science, and Domestic Art and an exhibit of school furniture, apparatus for teaching, photographs of buildings and play grounds, the teachers and children from the country were

shown some of the improved methods of teaching and some improved school equipment. Among those who addressed the meetings were State Superintendent of Education J. E. Swearingen and County Superintendent of Education O. J. Kern, of Winnebago County, Ill. A picnic dinner was served by Winthrop College to those attending the meetings on October 21.

Miss Russell is taking members of the Senior Class to the rural schools about Winthrop College this fall for observation and to give lessons on manual training, cooking, etc.

As a result of this work of Winthrop teachers quite a demand for extension work in household economics has arisen throughout the State. We hope the Legislature may provide the means for Winthrop to carry on more effectively and generally this work for the betterment of the schools and homes of the rural districts.

As a means of developing this work, and in order to secure the co-operation of the United States Department of Agriculture in it, a proposition made by a representative of the United States Department of Agriculture to have Miss Cromer, who is in charge of the Girls' Canning Club Work of South Carolina, located at Winthrop and connected with it and to work under Winthrop's direction, has been accepted.

SUMMER SCHOOL.

The Winthrop College Summer School held last summer, June 21-July 19, was well attended. The Registrar reports an enrollment of 382. Of these, 91 held degrees from some college and 196 held first grade teachers' certificates. There were present 73 primary teachers, 77 teachers of intermediate grades, 51 teachers and principals of high schools, 95 teachers of rural schools, and 23 County Superintendents of Education.

We provided in the Summer School for the teaching of not only the usual branches of a summer school, mathematics, English, Latin, history, science, writing, drawing, music, primary methods and pedagogy, but also of such other subjects as elementary agriculture, cooking, sewing, manual training, physical training, library methods, kindergarten, boy problems, Sunday school pedagogy and story telling. We had some of the strongest lecturers in the country, with national reputation, for the Summer School, including Dr. DeGarmo, Dr. Corson, Dr.

Snyder and others. Dr. Joynes, of our own Board, lectured on the characteristics of the English language.

Two very important conferences were held at the College during the Summer School, one of the County Superintendents of Education of the State, and one on Rural Life Problems. Some of the leading men of the United States took part in the Rural Life Conference, including Dr. Stiles, Prof. Duggar, of Alabama; Mr. Bradford Knapp, of the Farmers' Co-operative Demonstration Work, United States Department of Agriculture; Mr. H. E. Stockbridge, editor Southern Ruralist, and Dr. A. P. Bourland, of Washington, D. C. State Superintendent of Education J. E. Swearingen took part in both conferences.

We made special provision to meet the needs of rural teachers, believing that they of all teachers are best served by a summer school which has been well called the Rural Teachers' Normal School.

Every one attending the Summer School seemed pleased with the work of the instructors and with the board and entertainment given them. The County Superintendents of Education and the whole body of students adopted resolutions of thanks for all that was done for them. We feel sure that the attendance will be very much greater next summer as a result of the work of the Summer School last summer.

We hope and believe that with some help from the Legislature we may be able to make the Winthrop College Summer School the equal of any in efficiency and opportunities offered and thus enable all of our teachers, rural and urban, to get the special summer work desired by them at home without having to leave the State for it.

FARM AND GROUNDS.

A sanitary slaughter house with cement floor has been built on the farm. In accordance with the recommendations of Mr. B. H. Rawl, Chief of the Dairy Division, U. S. Department of Agriculture, we are improving our dairy herd by selling those cows which do not give a proper yield of milk for the feed given them as determined by the Babcock tester, and buying thoroughly good cows in their stead. We have added about twenty first-class cows to the dairy herd this past summer in this way. These new cows have a record of giving from 7,000 to 9,000 pounds of milk a year, and the milk tests from 6 per cent. to 8 per cent. butter fat.

Instead of buying all our beef cattle at one time and thus having to feed many of them at a loss after they have become fat, we adopted the plan this year of having them delivered to the College at different times. We feel sure that, in this way, the cost of our beef will be reduced. More ensilage has been raised and stored in the silos than ever before.

It is becoming more imperative each year that we should have more farm land for the College.

We feel the need of steady labor on the farm. If we could secure fifteen or twenty convicts for the farm, the labor question would be settled satisfactorily and money could be saved to the College and the State in the management of the farm. Clemson College is given some thirty convicts by the State and there is no good reason why Winthrop should be denied fifteen.

During the summer our President visited some of the large poultry farms of New Jersey, where 25,000 eggs are hatched at one time. From his observation and investigation we feel sure that poultry raising could be carried on successfully on the farm, provided faithful and expert management could be secured. It is an industry which we should carry on at Winthrop to furnish chickens and eggs for the boarding department and also to give our students some training in it for domestic purposes.

In a letter received from Mr. Harlan P. Kelsey this fall relative to plans for the improvement of our grounds, which he says he cannot make until we acquire more land, he writes, "With the increasing size of your College and the great need for development of such an institution in that section, you will always be short of land. I would urge my previous suggestion that every effort be put into securing more land."

TRAINING SCHOOL AND INDUSTRIAL ARTS AND SCIENCE BUILDINGS.

The plans for these buildings were perfected by the architects and accepted by the Building Committee the latter part of September and notices to building contractors that the contracts would be awarded at noon, October 24, 1911, were inserted in newspapers in this and other States over two weeks before the time for the award.

The Building Committee met on October 24th and opened the bids at noon of that day. There were eight bids for the construction of the Industrial Arts and Science Building. The lowest bid was made by J. T. Hunt & Co., of Greensboro, N. C., and the

contract for construction was awarded to him. The award of the heating contract was postponed for consideration of the advisability, if not necessity, of heating all buildings from the central power plant, as originally planned by the Board. The original cost of doing this, it being necessary to enlarge the power house, buy new boilers, and put down a large conduit pipe to do it, would be greater than heating the buildings separately, but the difference in cost of annual maintenance in favor of the central power plant would soon pay for the difference in cost of installment. If the original plan of the Board to heat all buildings from a central power plant is carried out, we shall have to ask the Legislature for an appropriation to enlarge the power house, add new boilers, and lay a large conduit pipe.

The general contractor has already begun work on the Industrial Arts and Science building and has made good headway on the foundations. The building has been located under the general advice of our landscape architect and is placed at about the only location suitable for it.

The contract for the construction of the Training School was awarded to the lowest bidder, Mr. J. A. Jones, of Charlotte, N. C.

The contractors for both buildings have filed properly signed contracts and given bond in the Maryland Casualty Company for the faithful carrying out of their contracts. Mr. Jones has given a bond for \$50,000.00 and Mr. Hunt for \$25,000.00.

The Training School is the very heart of the professional and practical training for which a normal school exists and it was primarily to strengthen and perfect the normal work of the College that we labored to secure such a school, but we have always had in mind another most useful purpose to which it could be put.

The higher grades of the Training School could easily be made to serve as a preparatory school without extra cost to the College in the interests of both the College and the State. It is thought that by using these grades for this purpose the cost to the College of maintaining the Training School could be reduced. The dormitory already on the High School grounds could be used as a beginning to accommodate students from a distance.

With such an arrangement for preparing girls for college, many of the earnest, strong, mature young women, mainly from the country, who are now unable to enter college for lack of preparation, and who are unable to prepare to enter because of a lack of

school facilities in their communities, could be given a chance for a college training, and the College proper would be relieved of all students not thoroughly prepared for real college work. By such an arrangement the standard of admission to the College could be raised without hardship to any one, still better material for college work secured, the efficiency of that work increased, and the whole people of the State better served.

The President of the Carnegie Foundation, a strong advocate of high standards for colleges, approves of such a college preparatory school as we have in mind, as we have shown in former reports.

DONATION BY PEABODY BOARD.

The Board has been notified by the General Agent of the Peabody Board that that Board, at a meeting held November 1, voted to donate to Winthrop College \$90,000.00.

In order to be equipped to take proper care of the girls of South Carolina, Winthrop College needs, in addition to those improvements already mentioned as being needed, the following:

A large Gymnasium, with swimming pool, running track and bowling alley. The small Gymnasium in the main building has been outgrown and the room taken up by it will be needed for the regular academic work of the College. There is nothing more important in the education of women than their physical training. An education without health does not amount to much.

The Auditorium to be enlarged. For the last two years we have been compelled to send the Freshman and Sub-Freshman classes home to make room in the Auditorium for our commencement visitors. The students fill the main floor of the Auditorium and overflow into the gallery.

Larger quarters for the Music Department.

Larger quarters for the Art Department.

A Propagation House and Greenhouse for teaching elementary agriculture.

A Young Women's Christian Association Hall and Students' Building. •

More land for the farm.

More land for the campus.

An air cleaning equipment for cleaning all the buildings by suction, thus insuring a thoroughly good, sanitary condition of the College premises at all times.

Larger Power House and Laundry.

Two deep wells. The water supply is already inadequate.

Three large transformers. These are needed to carry the extra electric load required for power and lights for the enlarged plant.

A large organ for the Auditorium.

The money generously given Winthrop College by the Peabody Board will supply only a few of these needs.

We believe that the first building to be erected with some of the Peabody appropriation, after the completion of the Training School and Industrial Arts and Science Buildings, is a large gymnasium to properly care for the physical well-being of the students.

PRACTICE HOME.

An exhibit of the work of the Practice Home and the industrial departments of Winthrop College, including the Department of Elementary Agriculture, at Mobile, Alabama, last February, during the annual meeting of the Department of Superintendence of the N. E. A., made by request of a representative of that department, attracted a great deal of attention. Our "Practice Home" appeals strongly to the good sense of men and women alike.

We believe that the housekeeper should be able to reduce the expense of maintaining the home, not only by a sensible economy, but also by the value of the products of the garden, the poultry yard, the orchard, the apiary, and the dairy, sold to outsiders and used in the home, and it is our purpose to stress this feature of housekeeping during the coming year more than heretofore and find out to what extent the average home may be self-supporting.

We have been slow in making improvements at the Practice Home, because we do not wish to put too much money in it, and because, further, we do not wish to make the equipment and furnishings too costly and beyond the average home of the State. If we did this, we would impair its usefulness as a practice home. We do not wish our students to get the idea that they can keep house properly only with all the costly modern conveniences. These conveniences would save trouble, but they are not found in eight out of ten of the homes of the State and cannot be placed there. We wish to teach our girls how to keep house properly in the average home and how to make the most of the average conveniences. We also wish to acquaint them with the conveniences and furnishings which the average home ought to have and may secure at a reasonable cost.

THREE TERMS INSTEAD OF TWO IN THE SESSION.

The Board has decided, upon the recommendation of the Faculty, to divide the session of nine months into three terms of twelve weeks each and to provide for a fourth term in the summer, as is so generally done by the leading normal schools of the country. The following reasons are given by the Faculty for this recommendation:

(1). By this means the work of the various departments can be grouped better than is now done. For instance, a study now running for two periods a week for the entire year can be completed in a term of twelve weeks by allowing to that study five periods per week, and similarly a three-period study can be completed in two terms. Each term can then be made a unit and credit given for a term's work. This will give flexibility to the course.

(2.) It will decrease the lost motion in passing from one term to another. In working under the two-term plan, the month of January is almost given up to preparation for examination and the examination itself. By this change the first examination will come just before Christmas. If a shorter examination period is given, say an hour and a half, and less relative value given to the examination, it will do much to relieve the strain and worry now so common on the part of the student.

(3). It will simplify the schedule, a matter of no small importance in handling a large body of students.

(4). It will help solve the problem of the work of the Seniors in the Training School.

(5). It will allow parents and guardians to make three payments a year instead of two, thus calling for a smaller sum at the time of each payment.

It is suggested that the summer term be six weeks in length, just half of a winter term. By this arrangement students who have conditions will have the opportunity of doing half a term's work in the summer to help make up the conditions. Teachers in the field will be enabled to attend the fall or the spring term, and, by taking the summer term also, can soon complete a course in which they may be given a certificate.

The adoption of this recommendation of the Faculty is a big step toward arranging short courses in the interest of the rural school teachers, a work we have very much at heart.

COURSES OF STUDY.

In a masterly address before the Southern Educational Association last winter one of the leading normal school men of the country voiced the prevailing opinion as to the function of the normal school of that most progressive section of the country, the Middle West. The following excerpts will give the gist of that opinion:

"The best normal schools have their students devote about two-thirds of the time to academic subjects and about one-third of their time to pedagogic subjects. Mere 'training' in the forms and doctrines of pedagogics and in supervised practice, produces, as a rule, only superficiality, unless intermixed with organized academic studies.

"The prospective teacher while preparing to be a teacher deserves every mental stimulus which can be made available, such as history and literature and other studies, from the college viewpoint.

"The old regime made the division into education for culture and education for utility. Now, we see that the classics and abstract mathematics were always utilitarian as much as they were cultural, provided the one studying them intended to do something in the world. We see, too, that the science laboratory, the garden, the gymnasium, the play ground, agriculture, sewing, scientific cooking and geography of commerce are as much for culture as they are for utility and as much for culture as any studies, provided only that the mind is properly guided while it is being exercised in and upon these basic elements in human activities."

It is gratifying to know that Winthrop escaped the domination of the narrow normal school ideal prevailing in some quarters and has been growing and developing since its beginning in a direction now very generally considered the right direction. Leaders of thought everywhere now recognize the value of practical subjects not only as bread and butter subjects, but also as culture subjects. Winthrop stands for a harmonious blending of academic, normal, and industrial education—an education that means the preparation of an individual for the duties of life and for service.

The new courses of study adopted by the Board for last session have been put in operation so far as possible. Students entering college under the old courses of study must be given the oppor-

tunity of continuing under those courses, and hence during the past year we have been carrying on the new courses of study in the Freshman year and the old courses in all classes above the Freshman.

It will be necessary to continue for the coming session the arrangement of last year relative to the admission of students from a nine-grade accredited school to a sub-collegiate class and from a ten-grade accredited school to the Freshman class. The list of accredited schools of Winthrop College is being thoroughly revised for next session in the light of the information furnished by the State High School Inspector.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION.

The Young Women's Christian Association of Winthrop is one of the strongest and best organized college associations in the South, and it is doing a vital social and religious work for the students, and for that reason is a most helpful factor in the right management of the institution. It has enrolled this session, already, 500 members out of an enrollment in the College of 743.

In response to the invitation of the Association the Student Volunteer Convention of the South Carolina Union was held at Winthrop College last February. The sessions of the Convention were generally attended by our students and the good derived from it by the student body was marked.

No money appropriated by the Board is accomplishing more good for the College, in our opinion, than the \$400.00 given to aid the Association in its work for the best interests of the College—the students' social and spiritual interests. The students deeply appreciate this help extended by the Board.

LIBRARY.

There seems to be an increase each year in the usefulness of the library as the students learn better and better how to make use of it. The librarian teaches the new students when they first enter college how to use the library in order that they may get the greatest amount of help from it during their college course. She teaches the seniors how to manage a small library and to make it most helpful in connection with any school they may be called on to teach. She also looks after the students who seem to have no taste for reading and tries to impress upon them the

vital importance of good reading and the place that it holds in their general culture and education. '

The floor space for book stacks and the shelf space for books are both practically exhausted and to shelve additional volumes it will soon be necessary to add a second story to the present stack room and to enlarge it by building on to it according to the original plans.

There are now 13,568 volumes in the library, not including pamphlets and some 7,000 government publications. This is an increase of some 1,238 volumes since our last report.

Our government publications are properly arranged for use and reference on the shelves, according to their several numbers, and have been used more than usual this past year by the students. The classes in junior history have found the usually dry Congressional Records particularly helpful in their research work.

The following circulation of books during the past year will give an idea of the use to which the library is put by the students:

Fiction	8,254
Biography	525
Philosophy	123
Religion	195
Sociology	574
Philology	17
Science	218
Useful Arts	262
Fine Arts	192
Literature	1,466
History	831
<hr/>	
Total	12,676

COUNTY SUPERVISION OF RURAL SCHOOLS.

There is no more vitally important educational problem in the State than that of the improvement of the rural schools and none that should receive more of the time and attention of an institution whose chief business is the preparation of teachers for the public schools and which serves a people eighty per cent. of whom live in the rural districts. We rejoice that Winthrop College has a leading part in Miss Russell's admirable work for the rural schools of York County, for which she is working to

show what may be done for the rural schools of every county. If the rural schools could all secure and retain professionally trained teachers, they might need little expert supervision, but it is well known that it is impossible for them to do this anywhere in this country, except in a few favored States. For this reason expert supervision is necessary for the rural schools to accomplish anything of much value for the people.

Miss Russell, under the supervision and with the co-operation of Prof. W. K. Tate, is working out the problem of county supervision of rural schools with judgment, tact, and a good prospect of success. If she can work out a plan of county supervision of rural schools for York County that can be duplicated with slight modifications to suit local conditions in other counties of the State, she will be doing one of the most important pieces of constructive educational work for South Carolina imaginable. Winthrop College stands ready to lend Miss Russell all the aid possible in her fundamental and far-reaching undertaking.

The lectures of Prof. Tate and Miss Russell to the Winthrop seniors the last part of the past session on rural school problems gave them an accurate understanding of rural school conditions and plans for their improvement.

EXPERIMENTAL RURAL SCHOOL.

We have wanted for some years to have an experimental rural school at Winthrop College. Last winter Dr. A. P. Bourland, representing the Peabody Board, came to Winthrop College and, explaining that he had \$600.00 for the purpose, proposed to establish an experimental rural school there under the supervision of Winthrop College, Prof. Tate, and himself. This proposition of Dr. Bourland was accepted and the experimental rural school was opened in an unoccupied house in the northwest corner of the College Campus with Mrs. Hetty S. Browne, a Winthrop graduate with long and successful experience, as a teacher in charge. The school was opened in March and was continued through the Summer School last summer as an observation school for the rural school teachers of the Summer School and is progressing admirably this session. Dr. A. P. Bourland strongly commends its work. We have arranged with a near-by rural school district to transport the children of that district to the Experimental Rural School, thus providing conditions more nearly like those of the regular rural school and demonstrating to that part of the

State the desirability and practicability of transportation of school children.

STUDENT SELF-GOVERNMENT.

There is hardly a more earnest, purposeful body of students anywhere than that at Winthrop. It has been the object in the conduct of the College to develop self-control, to strengthen character, while at the same time developing strong minds and healthy bodies. To this end self-government has been fostered so far as conditions would allow, believing that self-government develops self-control and character. The students have responded to the greater freedom allowed them and to the confidence reposed in them with loyalty and a fine spirit of earnestness. There has been no trouble or friction of any kind in the government of the College during the past year.

The student self-government in the dormitories and community life of the Campus and in matters affecting the comfort, health, honor, and reputation of the student body, granted the students last spring in response to a petition signed by the whole student body, is working out admirably. The order was good at Winthrop before this session, but it seems to be almost perfect now under student self-government. Our students have shown themselves ready for the self-government given them, which is now in force in many colleges for men and women in all parts of this country. We have been conservative in this matter and do not intend to go faster than college sentiment and conditions will warrant. It is pretty generally true that the least governed are the best governed.

The object of student self-government as stated in the constitution adopted by the students is to promote self-control, self-reliance, and strong character among the students and to prompt them to right action from a high sense of honor. The constitution also declares that it shall be the constant aim of the Student Government Association to firmly establish sound, wholesome customs among the students demanded by high ideals and right aims.

The strongest and best girls have been elected by the girls themselves as members of the Executive Board of the Student Government Association to carry out the constitution and by-laws adopted by the students, showing the determination of the students to have the spirit and letter of the law enforced as fixed by themselves.

ALUMNAE ASSOCIATION.

The chapters of Winthrop Daughters continue to be formed all over the State. The latest chapter was organized recently in Newberry, with Miss Elizabeth Dominick as president. It is hoped that in time there will be one of these chapters in each community in the State. Such chapters under the direction of the general Alumnae Association can be of great service to the College and to the cause of woman's education in the State. With last year's graduates and certificate students, there are now 1,022 full graduates of the College and 268 certificate students. In addition to these graduates and certificate students, some 2,500 young women have attended the College one or more years who were unable to remain for a diploma or a certificate.

The Alumnae were much interested in the celebration of the twenty-fifth anniversary of the establishment of the Winthrop Training School for Teachers, which occurred November 15th, but the Alumnae Committee appointed to arrange for the celebration finally decided to postpone it until next Commencement, when they thought they might be able to arrange more elaborate commemorative exercises and secure a greater attendance of former graduates and students.

The Alumnae are becoming more active in their organized work for the College. A large and enthusiastic meeting of former graduates and students was held at Columbia during the last annual meeting of the State Teachers' Association last spring in the old Winthrop Training School building, where the school was conducted for eight years before being moved to Rock Hill, the first year being held in the chapel of the Columbia Theological Seminary. Every class was represented at the meeting.

The Alumnae Association is raising money together with the other societies of the College, the Y. W. C. A., the three literary societies, the Daughters of the Confederacy, and the Rural School Improvement Association, to erect a students' building. Our Trustee, Mr. W. J. Roddey, is Trustee of this Students' Building Fund.

A new Alumnae Bulletin bringing the facts about graduates and certificate students up to date has been printed.

INSURANCE.

The three years' insurance on all the College property expired last August 31. We re-insured it for three years with money

appropriated by the Legislature at its last session at the rate of \$1.25 per hundred, making an annual rate of $41 \frac{2}{3}$ one hundredths of one per cent., the lowest rate ever secured by us. In accordance with the law one-fifth of the insurance was placed with the State Sinking Fund Commission. The property is now insured for three years for amounts as follows:

Building—	Value.	Building.	Insurance.
No. 1 Main Building	\$140,000	No. 1....	\$100,000
No. 2 North Dormitory	38,000	No. 2....	24,000
No. 3 Johnson Hall	66,000	No. 3....	45,000
No. 4 South Dormitory	60,000	No. 4....	29,500
No. 5 Library	45,000	No. 5....	25,000
No. 6 Dining Hall and Kitchen	42,000	No. 6....	30,000
No. 7 Power House	3,000	No. 7....	2,000
No. 8 President's Dwelling	4,000	No. 8....	2,325
No. 9 Servant's House	150	No. 9....	100
No. 10 Infirmary	4,000	No. 10....	3,000
No. 11 Smith Shop	200	No. 11....	100
No. 12 Pump House	150	No. 12....	100
No. 13 Green House	1,600	No. 13....	1,200
No. 14 Cherry House	1,600	No. 14....	1,200
No. 15 Dairy Building	750	No. 15....	500
No. 16 Engine Building	150	No. 16....	100
No. 17 Barn and Silos	3,500	No. 17....	2,500
No. 18 New Barn	1,200	No. 18....	800
No. 19 Cattle Shed	250	No. 19....	100
No. 20 Dairymen's House and Shed	175	No. 20....	130
No. 21 Dwelling on Main Road.	1,200	No. 21....	800
No. 22 Tenant Dwelling No. 1..	136	No. 22....	100
No. 23 Tenant Dwelling No. 2..	300	No. 23....	150
No. 24 Tenant Dwelling No. 3..	200	No. 24....	150
No. 25 Tenant Dwelling No. 4..	200	No. 25....	150
No. 26 Crib	75	No. 26....	50
No. 27 Machine Shop	75	No. 27....	50
No. 28 Stables	150	No. 28....	100

WATER SUPPLY.

It seems that the growth of the College and the building of negro houses above and around the old wells will require the

sinking of two or more deep wells on the Campus in the near future. The water supply is already scant for the growing needs of the College and it is only a question of time, and a short time at that, when we shall have to abandon the old wells as unsanitary. We feel compelled to ask for money at this time to enlarge the College waterworks plant to enable us to secure the amount of water imperatively needed for College uses.

BULLETINS.

The Bulletins of the College are issued mainly with a view of being of help to the teachers of the public schools—elementary, intermediate, and secondary, and also to the homes of the people. They have attracted much attention and are extending the College's usefulness and reputation. During the past year we have published the following bulletins:

- Suggestions for Rural Schools.
- Winthrop Corn Cooking School.
- Manual Training.
- Directions and Formulas for Spraying.
- Summer School Bulletin.
- Physical Training.
- Register of Alumnae.
- The Annual Catalogue.

A Bulletin on the Rural Life Conference held at Winthrop last summer is now in the hands of the printer.

There has been quite a demand for all of these publications.

LIST OF STUDENTS FOR THE GENERAL ASSEMBLY.

In compliance with the law requiring all State colleges to report to the General Assembly annually the names of all students, with postoffice address of each and whether such students are pay, beneficiary, or scholarship, we have prepared the list and submit it herewith. There are 139 pay students, 124 State scholarship students, 1 extra legislative scholarship, 31 dining room scholarship students, 5 service scholarship students, 8 students holding special scholarships given by individuals and organizations, and 434 with free tuition.

TRUSTEES' TERMS OF OFFICE EXPIRE.

The terms of office of the following members of the Board of Trustees expire at this session of the Legislature:

Dr. E. S. Joynes, Columbia.

Dr. T. A. Crawford, Rock Hill.

W. J. Roddey, Esq., Rock Hill.

These gentlemen have served the State as Trustees of Winthrop since its establishment faithfully and well.

FINANCES.

The financial report of the Treasurer of the Board for the scholastic year, July 1, 1910, to July 1, 1911, with the report of the Finance Committee of the Board is appended to this report.

The balance of the State appropriation for the support of the

The balance left over from the State appropriation for the support of the College is drawn out of the State Treasury as needed; and, together with the balance reported in the College Treasury July 1, 1911, \$6,851.93, and the receipts from the students at the beginning of this session is used for running the College, \$27,003.99, not including the appropriation for permanent improvements and special purposes, undrawn at the date of the financial report, July 1, 1911, is not included in the receipts of the College in this report.

In the total receipts of the College we have included the money paid by students and teachers for board and the scholarship fund, which, however, do not go to the general support of the institution, but to the running of the boarding department. These amounts are not usually reported in the financial statements of other colleges.

An itemized statement of the receipts and disbursements of the College has been filed with the State Superintendent of Education, as required by law. The Treasurer of the Board gives a bond, which is deposited with the State Treasurer.

Upon investigation we find that normal schools in different parts of the country are supported by a fixed mill tax. This seems to be an excellent arrangement and we hope that eventually we may come to it in South Carolina.

ESTIMATES FOR NEXT SESSION.

A careful estimate of expenses based upon the experience of last session, and a thorough consideration of the needs of the College, with its present enlarged scope and work unimpaired, to care for an increased attendance, shows that we shall need the following amounts for running expenses, equipment, repairs, etc., for the coming year:

SUMMARY OF ESTIMATES.

Ordinary Expenses.

Salaries of officers, teachers and employees now fixed for this session as follows:

D. B. Johnson	\$3,500 00
J. W. Thomson	2,000 00
James P. Kinard	2,000 00
E. C. Coker	2,000 00
T. O. Mabry	2,000 00
C. Edward Johnson	2,000 00
F. A. Hodge	2,000 00
A. O. Bauer	2,000 00
Jas. W. Fertig	1,500 00
Miss Alice E. Jones	1,200 00
Miss Alice M. Moudy	1,200 00
Miss Sarah A. Spencer	1,200 00
Miss Maud M. Isles	1,200 00
Mrs. B. W. Birdsall	1,200 00
Miss Eva R. Hughes	1,200 00
Miss A. L. Leggett	1,200 00
Miss Mary F. Wickliffe	1,200 00
Miss Grace L. Morrison	1,200 00
Dr. Lois Boyd	1,200 00
Miss Mary C. Coleman	1,200 00
Miss Leila A. Russell	1,200 00
L. A. Niven	1,500 00
Miss Mary G. Pope	800 00
Miss Fannie Watkins	800 00
Miss Nettie Wysor	800 00
Miss Mary F. Dickson	800 00
Miss Jane B. E. Brown	700 00

Miss Amelia E. Mellichamp	700 00
Miss Christine South	700 00
Miss Fannie Evans	800 00
Miss Annie V. Dunn	800 00
Miss Sara Gilman	700 00
Miss Marcia Clark	700 00
Miss Mary L. Porter	800 00
Miss Stella Palmer	700 00
Miss Ellen H. Forsythe	600 00
Miss Fannie Beckmann	700 00
Miss Florence E. Bennett	800 00
Miss Elsa Jennings	800 00
Miss Louise Siddall	700 00
Miss Pawnee Jones	800 00
Miss E. C. Schutt	800 00
Miss Sadie Jenkins	700 00
Miss Ermine Wilfong	700 00
Miss Nancy G. Campbell	700 00
Miss Amy L. Ward	600 00
Miss Mary W. Higgins	600 00
Miss Bess Kibler	600 00
Miss Ernestine Purdom	600 00
Miss Sara Withers	1,200 00
Miss Sarah I. Grant	800 00
Miss A. Winton Parks	800 00
Miss Leila M. Cobb	800 00
Miss Minnie Macfeat	1,200 00
Miss S. R. Marcum	1,000 00
Miss Mamie E. Gunter	1,000 00
Mrs. Lily Richards	800 00
Mrs. Lily Shumate	600 00
Mrs. Ellen F. Norwood	600 00
W. Harry Wylie	1,200 00
E. R. Rivers	1,620 00
W. T. Clawson	900 00
Mrs. E. V. J. Cobb	1,200 00
Miss Mary B. Ordway	600 00
Miss Julia Crosland	360 00
Miss Carrie Hyde	700 00
Miss Minnie Parker	360 00
Miss Anna E. Cordes	360 00

Mrs. Annie W. Funkhouser	360 00	
Miss Ida J. Dacus	1,100 00	
Miss Mary Martin	420 00	
Miss Emily N. Smith	600 00	
Miss Florence L. Boyd	600 00	
Mrs. Julia A. Sims	600 00	
Miss Edith McCarrell	360 00	
Mrs. Jennie V. Carroll	360 00	
Miss Mary A. Ervin	360 00	
Miss Caroline P. Means	1,000 00	
Mrs. Hetty S. Browne	675 00	
J. M. Whisenant	840 00	
		<hr/> \$77,775 00

Salaries last year as per financial report, \$71,860.00.

The following itemized statement of salaries last year will show by comparison what new or increased salaries are being paid during the present session.

Salaries of officers, teachers, and employees for last session as follows:

D. B. Johnson	\$3,500 00
J. W. Thomson	2,000 00
J. P. Kinard	2,000 00
E. C. Coker	2,000 00
T. O. Mabry	2,000 00
C. E. Johnson	2,000 00
A. O. Bauer	2,000 00
L. A. Robinson	1,500 00
F. A. Hodge	2,000 00
Miss Alice E. Jones	1,200 00
Miss Alice M. Moudy	1,200 00
Miss Maude Isles	1,200 00
Mrs. B. W. Birdsall	1,200 00
Miss Eva R. Hughes	1,200 00
Miss Margaret Whittemore	1,200 00
Miss Mary C. Coleman	1,200 00
Miss Mary F. Wickliffe	1,200 00
Miss Grace L. Morrison	1,200 00
Miss Sara A. Spencer	1,200 00
Miss Mary G. Pope	700 00
Miss Fannie Watkins	700 00

Miss Nettie Wysor	700 00
Miss Mary F. Dickson	700 00
Miss Fannie Evans	700 00
Miss Annie V. Dunn	700 00
Miss Lora B. Able	700 00
Miss Mary L. Porter	700 00
Miss Delgracia B. Gay	700 00
Miss Christine South	600 00
Miss Amelia Mellichamp	600 00
Miss Jane B. E. Brown	600 00
Miss Fannie Beckmann	600 00
Miss Marcia A. Clark	600 00
Miss Florence Bennett	700 00
Miss Ellen Forsythe	500 00
Miss Bertha Gould	800 00
Miss Pawnee Jones	700 00
Miss E. C. Schutt	700 00
Miss Sadie Jenkins	600 00
Miss Ermine Wilfong	600 00
Miss Kate M. Laxton	600 00
Miss E. Myrtle Bauman	600 00
Miss Katherine Kirkpatrick	600 00
Miss Nancy G. Campbell	600 00
Miss Olga Schauweker	600 00
Miss Gertrude Brueser	600 00
Miss Sara Withers	1,200 00
Miss Leila M. Cobb	700 00
Miss Sarah I. Grant	700 00
Miss Minnie Macfeat	1,200 00
Miss A. Winton Parks	700 00
R. B. Cunningham	1,620 00
L. A. Niven	1,200 00
Mrs. Lily Richards	800 00
Mrs. Lily Shumate	600 00
Mrs. E. F. P. Norwood	600 00
Dr. Lois Boyd	1,200 00
Miss S. R. Marcum	1,000 00
E. R. Rivers	1,620 00
Mrs. E. V. J. Cobb	1,000 00
Miss Mary B. Ordway	600 00
Miss Minnie Parker	270 00

Miss Carrie Hyde	700 00

Special Expenses.

Enlarging Infirmiry—\$6,000 00 in 1913	
6,000 00 in 1912	\$6,000 00
Enlarging Auditorium—\$7,500 00 in 1913	
7,500 00 in 1912	7,500 00
Special scholarships awarded by the Legislature (Miss Gunter and Miss Plowden)	208 00
Summer session specially for rural teachers.. . . .	1,000 00
Professor of Elementary Agriculture and Nature Study.. . . .	500 00
Three additional critic teachers to care for larger enrollment in Normal Department (four months)	960 00
Extension work in household economics, home and rural school sanitation, especially in mill and rural districts	1,700 00
Three large transformers	1,080 00
Enlarging waterworks plant	3,695 00
Enlarging power house and heating plant.. . . .	7,375 00

Appropriation required \$122,331 29

This estimate, which is less than that of last year notwithstanding the fact that our enrollment is 743, forty greater than

last year, provides for the additional teaching and executive force and the additional expenditures required to care for one of the largest educational institutions in the South and the only one supported by South Carolina for young women; also for work by Winthrop for all the rural school teachers of the State in a Summer School, for county supervision of rural schools, for the conduct of an experimental rural school, and for extension work in household economics in the interests of the women and the homes of the State.

Our estimate does not include the scholarship fund as a resource of the College, because that fund is paid not to the College, but to the students individually, to help them defray their expenses, according to the Act approved February 25, 1904. The College acts as agent for the students in drawing the money from the State Treasury.

We ask for \$122,331.29 to train the young women of the State as teachers for the public schools, as bread-winners in other ways, and as home-makers, and also to enable the College to serve the rural school teachers already teaching, and to work for the betterment of the homes of the people upon which rests in the last analysis the welfare of the State. The economy that must be practiced in doing all of this work with the appropriation asked for is seen when it is known that it is only about one-third of the amount required to run institutions of about the same size as Winthrop. South Carolina could well afford to appropriate as much money for the higher education of her young women as she wisely does for the higher education of her young men, but as a matter of fact she appropriates far less, although the young women out-number the young men of the State, and a far greater proportion of them are prepared for college annually as the records of the high schools will show.

We do not believe that any institution similar to Winthrop is run more economically or can show greater or better results for the money expended by the State.

For every dollar appropriated by the State on the Winthrop plant we have raised another dollar from other sources and the Winthrop plant is worth more than twice as much to the State today as the State has spent on it.

Respectfully submitted,

COLE L. BLEASE,

Governor and Chairman of the Board of Trustees.

	<hr/>	12,705.19
July 1, 1911, balance on hand.....	6,851.93	
	<hr/>	\$211,949.58

The above report is for the scholastic year, July 1, 1910, to July 1, 1911, as required by law.

The balance of the State appropriation for the support of the College, \$27,003.99, not including appropriations for permanent improvements and special purposes, undrawn at the date of the financial report, July 1, 1911, is not included in the receipts of the College in this report.

The balance left over from the State appropriation for the support of the College is drawn out of the State Treasury as needed, and, together with the balance reported in the College Treasury, July 1, 1911, \$6,851.93, and the receipts from the students at the beginning of this session is used for running the College up to the next appropriation by the Legislature, some time in February, and will be accounted for in the next annual report.

In the total receipts of the College we have included the money paid by students and teachers for board and the scholarship fund, which, however, do not go to the general support of the institution, but to the boarding department. These amounts are not usually reported in the financial statements of other colleges.

An itemized statement of the receipts and disbursements of the College has been filed with the State Superintendent of Education and of expenditures with the Comptroller-General, as required by law.

Respectfully submitted,

D. B. JOHNSON,
President and Treasurer.

Rock Hill, S. C., November 24, 1911.

To the Board of Trustees of Winthrop Normal and Industrial College of South Carolina.

Gentlemen: Your Finance Committee report that they have examined the books and vouchers of the Treasurer of the College up to Nov. 1, 1911, and find the same correct and the books kept in first-class manner.

D. W. McLAURIN,
J. E. BRAZEALE,
WILIE JONES,
Finance Committee.

Winthrop College Roll

Winthrop College, Rock Hill, S. C., Nov. 24, 1911.
Hon. J. E. Swearingen, State Superintendent of Education.

Dear Sir: In pursuance of the Act approved February 24, 1906, I submit herewith the names of all students enrolled at Winthrop College, showing whether they are pay, beneficiary, or scholarship students. There are in the College this year 139 pay students, 124 State scholarship students, 31 dining room scholarship students, 5 service scholarship students, 1 extra legislative scholarship student, 8 students holding special scholarships given by individuals and organizations, and 434 students with free tuition.

Respectfully,
 D. B. JOHNSON,
 President Winthrop College.

SIXTY-THIRD ANNUAL REPORT

OF THE

South Carolina Institution

FOR THE

Education of the Deaf
and the Blind

Cedar Spring, S. C.

1911.

BOARD OF COMMISSIONERS.

COL. T. J. MOORE, Chairman.

HON J. E. SWEARINGEN, *Ex-officio*.

DR. G. W. HEINITSH.

DR. J. F. CLEVELAND.

COL. J. D. CAPPELMANN.

LETTER OF TRANSMITTAL.

South Carolina Institution for the Education of the Deaf and the Blind.

Cedar Spring, S. C., Dec. 11, 1911.

To Hon. Jno. E. Swearingen, State Superintendent of Education, Columbia, S. C.:

In behalf of the Board of Commissioners of the South Carolina Institution for the Education of the Deaf and the Blind, I herewith transmit the Sixty-third Annual Report of said institution.

The accompanying report of the Superintendent gives in detail the number of pupils enrolled; the several progressive steps taken during the year tending to the general improvement and forward progress of the school; the financial status, and statement of appropriations necessary for 1912.

Vouchers covering itemized statement of the expenditure of the funds appropriated for this institution have been carefully audited by the auditing committee of our Board and found to be correct.

In this day of apparent extravagant expenditure of public moneys, it gives us pleasure to be able to present to you and through you to the law-making body and to the taxpayers of South Carolina the noteworthy fact that this school stands second to none in the United States for its economical expenditures. Its per capita expense is the lowest of any school of its kind and its work and equipment compares favorably with the best. This state of affairs is the result of the long experience and capable supervision of the Superintendent, who is so ably seconded in his work by his young, energetic, and forceful Principal.

The report shows that the following appropriations will be necessary for the proper conduct of the school for 1912:

For Support.. . . .	\$30,000.00
For Repairs.. . . .	500.00
For Improving Grounds.. . . .	4,500.00
For Scholarships, under Act of Feb. 15, 1910....	600.00

The amount asked for support is same as for 1911; for repairs is amount usually allowed; for scholarships is amount of appropriation under Act as per date above stated; the amount for improving grounds is based on accurate and expert survey with the necessary plans and estimates, and as stated by the Superintendent, "the grading, macadamizing, and draining of the driveways approaching and surrounding the buildings" is the first step necessary in the proper improvement of the grounds.

T. J. MOORE,
Chairman Board of Commissioners.

OFFICERS AND TEACHERS OF THE INSTITUTION.

Superintendent,
N. F. WALKER, LL. D.

Matron,
MRS. V. E. WALKER.

Physician,
GEO. W. HEINITSH, M. D.

Principal,
W. L. WALKER, A. B.

Teachers of the Deaf,
Miss T. E. Gaillard. Mrs. M. M. Thackston.
Miss M. L. Cotton. Mrs. G. D. Coleman.
Miss A. E. Dunn. Miss A. Bowman.
Miss C. Feland.

Teachers of the Blind,
Miss S. B. Bledsoe.
Miss H. L. Livermore, to Jan 1st.
Miss S. F. Warren, Jan. 1 to June 30.
Miss V. R. Finley.

Music Teachers,
W. W. Donald. Miss N. Curran.

Teacher of Drawing and Painting,
Mrs. G. D. Coleman.

Teacher of Physical Culture and Gymnastics,
Miss H. L. Livermore, to Jan. 1st.
Miss S. F. Warren, Jan. 1st to June 30th.

Instructor Industrial Department for Blind Girls,
Miss N. Curran.

Teacher of Typewriting and Office Stenographer,
Miss L. Wharton.

Instructor Industrial Department for Deaf Girls.
Miss Eula Edwards.

Master of Shoe Shop,
A. B. Locklier.

Foreman of Printing Office,
J. M. Frierson.

Master of Shop for Blind Boys,
H. W. Estes,

Foreman of Wood Shop,
W. K. Barnett.

DEPARTMENT FOR COLORED PUPILS.

Teachers of the Deaf,
J. M. Frierson, Miss R. Gordon,

Teachers of the Blind,
H. W. Estes, Miss C. E. Caldwell.

Matron,
Mrs. M. Mills.

Steward and Boys' Supervisor,
Geo. W. Mills.

SUPERINTENDENT'S REPORT.

To the Board of Commissioners of the Institution for the Education of the Deaf and the Blind.

Gentlemen: The following report of this institution for scholastic year 1910-11 is respectfully submitted.

During the year 204 pupils were enrolled—124 deaf, 79 blind, and 1 blind-deaf; 151 white and 53 colored.

No death occurred during the year from sickness and I am thankful to be able to say as I did in my report of 1909-10: "The hospital for girls was not opened at all during the year and that for the boys only once." On the 31st of October Clyde Rogers, one of our brightest and most trustworthy deaf boys, left the premises without permission, early in the morning, and was found about 11 o'clock near the track of the Southern Railway, a short distance beyond Fair Forest Station, unconscious. He was promptly brought to the Spartanburg hospital, where he had the attention of the surgeons of the Southern Railway Co., and of our own physician. He never regained consciousness, but died on the 8th of November. As soon as he was missed from the premises every effort was made to locate and protect him even to the extent of notifying train dispatchers of the railroads. He did not go in the direction of his home, but in the opposite direction.

The work in our literary, music, industrial, physical culture, art, and domestic departments has been carried forward with satisfactory results; especially has this been done in matter of the industrial training for our blind girls. In this department we have added during the year raffia work, basketry, rug weaving, and machine sewing. In the line of physical culture we have added to our equipment a considerable amount of play-ground apparatus. The installation of this play-ground apparatus has resulted in the betterment of the physical condition of those children who took no delight in the gymnasium work proper.

The discipline of the school has been carried forward without special friction of any kind. In fact, the management of the school takes pride in this matter and its results.

After careful study, much research, correspondence, investigation, and consultation our Principal has outlined a course of study which we feel sure will add much to the efficiency and forward progress of our school work.

Acting under resolutions of your Board, the memorial tablet to the founder of the school, Rev. N. P. Walker, having been placed in the auditorium, was unveiled with suitable exercises on the 28th of June.

By your direction a careful and complete survey of our grounds has been made and a topographical map with plans and specifications for grading and planting has been prepared. With these maps, plans, and specifications in hand we are prepared to enter upon a systematic improvement of our grounds which will greatly enhance their attractiveness, and then, as stated in last annual report, "We can have a very attractive home environment for the deaf and the blind school children of the State." The first step in the improvement of our grounds will necessarily be the grading, macadamizing and draining of the driveways approaching and surrounding the buildings. This initial step will cost \$4,500.

The following list gives names of pupils enrolled and Counties from which they come:

The current expenses for support from July 1, 1910, to December 31, 1910, amount to \$12,662.17, and from January 1, 1911, to June 30, 1911, to \$16,059.19, making a total of \$28,721.36 for scholastic year ending June 30, 1911, as shown by the following statement:

RECEIPTS.

From Appropriations for Support.. . . .	\$28,489.66
From other sources.. . . .	231.70
	<hr/>
	\$28,721.36

EXPENDITURES.

Salaries.. . . .	\$10,249.83
Groceries and Provisions.. . . .	6,993.88
Wages.. . . .	4,304.27
Furniture and Household Goods.. . . .	1,874.18
Wood and Coal.. . . .	1,153.74
Lights, Fixtures and Power.. . . .	708.52
Feed of Stock.. . . .	695.61
Laundry.. . . .	574.54
Improvements and Repairs.. . . .	506.87
Books, Stationery, etc.. . . .	346.45
Traveling Expenses.. . . .	339.67
Shops.. . . .	171.12
Medical Attention and Medicines.. . . .	152.18
Clothing.. . . .	138.02
Express, Telegrams and Freight.. . . .	124.28
Postage.. . . .	81.66
Grounds.. . . .	79.23
Telephone Service.. . . .	60.00
Tools, Blacksmithing, Etc.. . . .	46.88
Commercial Fertilizers.. . . .	44.64

Harness, Etc..	24.52	
Miscellaneous.. . . .	51.27	
		<hr/> \$28,721.86

The financial statement for support, as given above, is for the scholastic year beginning July 1, 1910, and ending June 30, 1911, and does not, therefore, give the financial status of the school for the entire fiscal year, but only to June 30, 1911. Received for Repairs and Grounds—Appropriation

1910.. . . .	\$1,000.00
Paid for Repainting and calsomining inside buildings, survey, plans, etc., of grounds....	\$1,000.00
Received for Printing Press, Plumbing, Play Grounds and Tablet—Appropriation 1910.. . . .	\$1,800.00
Paid for Printing Press and Fixtures.. . . .	\$ 604.45
Paid for Plumbing.. . . .	700.88
Paid for Play Grounds and Fixtures.. . . .	290.92
Paid for Tablet and Freight.. . . .	203.75
	<hr/> \$1,800.00
Received for Scholarships, Etc.—Appropriation 1910...	\$600.00
Paid for Improvement of Library and of the In- dustrial Department.. . . .	\$600.00
Received for Insurance—Appropriation 1911.. . . .	\$1,446.98
Paid for Three years' Insurance on Buildings and Furniture.. . . .	\$1,446.98
Received for Repairs and Grounds—Appropriation 1911.. . . .	\$1,000.00
Paid for Painting Buildings, Motors, Pump Line, Etc.. . . .	\$1,000.00
Received for Scholarships, Etc.—Appropriation 1911...	\$600.00
Paid for Scholarship, D. S. Jones.. . . .	\$150.00
Paid for Improvement of Library and of the In- dustrial Department.. . . .	187.97
Balance on hand.. . . .	262.03
	<hr/> \$600.00

The last Legislature made the following appropriations for this school:

For Support.. . . .	\$30,000.00
For Repairs and Grounds.. . . .	1,000.00
For Insurance.. . . .	1,446.98
For Scholarships.. . . .	600.00

The appropriation for insurance has been expended in placing policies for three years on our buildings and furniture to amount of \$67,386.50. The appropriation for repairs and grounds has been expended in the usual repairs inside and outside the buildings, on the grounds and in repairs on pump line and station, etc.

A portion of the appropriation for scholarships has been set aside for enabling Mr. Demos Jones to matriculate in the South Carolina University. The balance will, under the Act, be expended in the improvement of the Library and the industrial department of the school. Mr. Jones, from our schoolrooms, passed into the University with entrance examination marks most gratifying to this school.

The following appropriations will be required for the proper maintenance of the school for 1912, and for the special purposes as enumerated, viz :

For Support.. . . .	\$30,000.00
For Repairs.. . . .	500.00
For Improving Grounds.. . . .	4,500.00
For Scholarships.. . . .	600.00

The Legislature, during the session of 1911, passed a resolution to visit as a body our school on the 19th of January, 1912. We feel sure that this visit will result in much good to the school in the way of having this distinguished body of law-makers and representative citizens of the State see what is being done here for the deaf and the blind school children by the State. It will be the first time in the sixty-three years of the history of the school that it has had the honor of such an official visit. The Deaf Alumni asked permission to hold a reunion here at the time of our public closing exercises in June. We advised against this plan, but suggested that we would be pleased to present their request to your Board to permit them to hold the reunion here in August. This arrangement was endorsed by your Board, and a very pleasant, profitable and successful meeting was held here from the 15th to the 17th of August, and was attended by almost one hundred of the former pupils of the school.

By your permission our Principal visited, during the spring, a number of the larger schools for the deaf and the blind in the East and Middle West. This insight into the work of other

schools has, we feel sure, been of much benefit to our school, and especially helpful in the outlining of our new course of study.

The Superintendent and Principal attended the Triennial Convention of Teachers of the Deaf at Delavan, Wis., in July. There they met over three hundred teachers from the different States. Numerous subjects bearing on the work done, and to be done in the future, in our special line of educational work were presented and discussed. A considerable exhibit from the Industrial Departments of the schools was made. The work done in our school in this line compares favorably with that done in the best of the schools. Our Principal, at this Convention, was honored by being made Chairman of the Southern Local Committee.

By order of your Board a complete medical examination of all our pupils was made at the opening of the present school term by our physician, Dr. G. W. Heinitsh, assisted by Dr. L. J. Blake. Hereafter all new pupils will, likewise, be examined on admission. An itemized record of each child's condition is on file in the office. These files show our pupils to be free from serious organic trouble.

Respectfully submitted,

N. F. WALKER,
Superintendent.

December 8, 1911.

TERMS OF ADMISSION.

1st. Persons desiring to procure the admission of pupils should apply by letter, or otherwise, to the Superintendent of the Institution for instructions as to the manner of procedure, and no pupil should be sent to the institution until such instructions shall have been fully complied with.

2nd. All are required to come provided with an adequate supply of good, comfortable clothing, embracing suitable articles for both summer and winter wear, in such quantity as to admit of the necessary changes for washing and repairing; the whole to be neatly packed in a good trunk, with good lock and key.

3rd. Each article of clothing should be distinctly marked with the owner's name, in order to prevent confusion or loss, and must be sent in good order and condition, not only upon the first entrance of the pupil, but also at each subsequent return from home after the vacation.

4th. A small amount of money will be required to be deposited with the Superintendent for the benefit of the pupil, should need require.

5th. Pay pupils charged \$150 for session of nine months.

6th. Except in cases of sickness, all pupils are expected to remain at the institution from the commencement to the close of each session, at which time parents or friends should be prepared to take them home to spend the vacation.

7th. The scholastic session commences on the first Wednesday in October and closes on the last Wednesday in June.

8th. No person of imbecile or unsound mind, or confirmed immoral character, or incapacitated by physical infirmity for useful instruction, will knowingly be received into the institution; and in case any pupil shall, after trial, prove incompetent for useful instruction, or wilfully and persistently disobedient to the regulations of the institution, such pupil will thereupon be discharged.

LOCATION.

The South Carolina Institution for the Education of the Deaf and the Blind is located at Cedar Spring, Spartanburg County, four miles south of Spartanburg and one mile west of Cedar Spring Station, on the Spartanburg and Columbia Railroad, and occupies a healthful and pleasant site.

TWENTY-SECOND ANNUAL REPORT

OF THE

BOARD OF TRUSTEES

OF THE

CLEMSON

AGRICULTURAL COLLEGE

TO THE

General Assembly of South Carolina

1911

LETTER OF TRANSMITTAL.

*Hon. J. E. Swearingen, State Superintendent of Education,
Columbia, S. C.*

Dear Sir: In submitting to you, and through your hands, to the representatives of the State of South Carolina, as required by law, this, the twenty-second Annual Report of the Board of Trustees of the Clemson Agricultural College, we wish to state that the health of the institution has been good, discipline of the College has been strong and sufficient, proper good feeling exists between the student body and the faculty, and we feel sure that the College is continuing upon its career of usefulness.

Very truly and respectfully,

ALAN JOHNSTONE,

President, Board of Trustees.

Clemson College, S. C., November 1, 1911.

The Twenty-Second Annual Report of the Board of Trustees of the Clemson Agricultural College of South Carolina.

Clemson College, S. C.,
November 1, 1911.

To the General Assembly of the State of South Carolina.

Gentlemen: In obedience to law, we herewith submit the report of the President and other officers as the Annual Report of the Board of Trustees of the Clemson Agricultural College, for the year beginning July 1, 1910, and ending June 30, 1911. Accompanying this is a report of the Board of Visitors, who last May made a thorough examination of the College.

The books and accounts of the Treasurer were audited by Col. D. H. Wise and Mr. J. B. Haltiwanger, and their report is included herewith. This brings the audit of the College accounts up to July 1, 1911, and represents an additional precaution to insure both honesty and accuracy, since twice each year the Finance Committee of the Board checks up carefully all expenditures to see that they have been made in accordance with the spirit of the itemized appropriations made by the Board.

We are glad to be able to state without reserve that each and every department of the College is doing splendid work. The President's report gives full information in regard to every phase of the work of the College, and we commend it to your careful consideration. His report confirms our impression that the officers of the College are loyal and enthusiastic, and that harmony, necessary to efficiency, prevails in the organization.

We regret to have to announce the retirement of Prof. W. R. Perkins, the Director of the Agricultural Department, and Prof. D. N. Barrow, the Superintendent of the Division of Extension Work and Farmers' Institutes. Prof. Perkins leaves to accept a lucrative position with a large agricultural syndicate in Mississippi, and Prof. Barrow was forced by family considerations to move to Texas. The good work performed by both of these gentlemen while connected with the College is the best evidence of the deserved appreciation in which they are held by the President and the Board.

We desire in this report to emphasize the fact that the Board of Trustees feels abundantly satisfied in their selection of the new President. It was a fact well known to every member of the Board that he was a man possessed of unusual ability and splendid equipment for the position of Director of the Engineering Department. The only hesitation which was felt by the Board in electing him to this new position, was the fear of leaving the position, which would be vacated by his elevation to the Presidency, without his strong guiding hand. We are pleased to say in this connection that Prof. Earle, elected to that position, has measured up fully to our expectations, while the President has taken charge of the College, exhibiting the same energy, faithfulness and splendid judgment in guiding the College and its affairs that he had displayed in the other position, which he had so acceptably filled for so many years.

It is a great satisfaction to the Board of Trustees to be able to state that the affairs of the College are in splendid shape, with every Department doing good work, and harmoniously moving forward, which results reflect, not only the consecrated service of the President, but also his good judgment and self-poise in dealing with the general affairs of the College.

The Board realizes fully the responsibility of making the Agricultural work of the College paramount, and it might be wise in this connection to call attention to the three phases that this work naturally assumes.

The Experiment Station is engaged in discovering new facts regarding the growth and improvement of plants and Agricultural methods. The Agricultural Department proper is engaged in the instruction of students and operating the College Farm, while the Extension Division carries the work of the College and the truths discovered by our Experiment Station directly to the homes of our people. These three interests co-operate and mutually supplement each other so that there results a symmetrical structure built upon these three important foundation stones.

At the time of writing this report, there is considerable likelihood of the fertilizer tax receipts falling off from the figure of last year. While some have thought that the College received more money than it needs from this tax, any diminution would be speedily apparent in a necessary curtailment of that Public Service which the College is just now in a position to render to

the best advantage, and which at present amounts to \$99,000 annually. For the sake of these interests, we should deplore a reduction of our principal source of income.

Trusting that this our report may receive your careful consideration,

Very respectfully submitted,

ALAN JOHNSTONE,
President, Board of Trustees.

REPORT OF THE BOARD OF VISITORS.

Clemson College, S. C.

May 4, 1911.

*To the Board of Trustees, the Clemson Agricultural College,
Clemson College, S. C.*

Dear Sirs: The Board of Visitors, Clemson Agricultural College, met on May 3rd, 1911, for the purpose of overlooking the affairs of the College, and of reporting to the Board of Trustees our findings and conclusions in regard to the work of the College.

We were treated with great courtesy by the President and every officer of the College with whom we came in contact.

We are pleased that since our last report, the Board of Trustees have seen fit to elect Mr. W. M. Riggs President of the College. We hope and believe that he is the right man in the right place, and we confidently look forward to better work than ever, under his guidance.

We are pleased to note that the Board has seen fit to adopt several of the recommendations made by us at our last meeting, and that the activities of the College are constantly enlarging, by getting in closer touch with the agricultural life of the State. While the total income of the College, owing to the heavy sales of the fertilizers, has increased considerably over last year, almost the whole of the increase has gone directly back to the farmers, in the shape of larger appropriations for public work, that is, work by the College directly affecting the agricultural welfare of the State. We are glad to see that work has begun on the new Dairy, and that plans have been drawn for the new Dairy Barn. These buildings will add greatly to the equipment of the

College, and will be an object lesson to the farmers of the State who wish to go into the dairy business.

The Experiment Station, run in connection with the College, is well managed, and is an object lesson to the farmers of the State, in showing how land may be built up with the proper rotation of crops, almost without cost, so far as fertilizers are concerned.

We desire to call attention to the small per cent. of students who pay tuition. This might have been excused a good many years ago when our State was in great financial straits, but we are satisfied that the privilege of attending this College without the payment of tuition is being abused. With the great prosperity everywhere existing, and the large prices that cotton has been bringing in this State, very few students, it seems to us, ought to have to ask for free tuition. We recommend that the Board of Trustees address itself to the devising of some means by which people who are able to pay tuition should be made to do so. A mere certificate will never have the effect of making people pay tuition, because some men, regardless of what they are worth, imagine they are not able to pay tuition. We think that a copy of the tax returns of both parents, where their children are seeking free tuition, should be required from the Auditor of the County, and in addition, sworn statements of the worth of each parent, setting forth the property in detail owned by them, before granting a free scholarship, or excusing them from paying tuition.

We are pleased to report that the Boarding Department is now self-sustaining. We congratulate the management of that Department upon the fact of it being now self-supporting. The Board of Visitors had the pleasure of dining with the cadets during our stay, and found that the fare was abundant, well cooked and well served. It is wonderful, the cheapness with which this Department is conducted, and shows what can be done by intelligent and systematic management. Students can live here as cheaply as at home, and get an abundance of substantial and well cooked food. We found that the health of the students was excellent, and showed that they were not suffering from the lack of abundance of good food.

We were also pleased to note that the grounds have been improved since our last visit, by the putting down of a number of cement walks over the grounds. We think that the money to do this has been well spent, as we regard the grounds as a very

valuable asset of the College. We think further improvements along this line will be of material benefit to the institution.

We would also like to call the attention of the Board to the importance of an up-to-date gymnasium and plunge bath, either in some building already constructed, or in a building especially put up for that purpose. We think this would add very much to the health and pleasure of the students, and should the Board find that this improvement can be made, we think it would be money well expended.

We learned with much interest of the plans to enlarge the dormitory accommodations, and hope that the improvement will be completed in time for the next session.

We cannot too strongly recommend the good work that is being done in the State along agricultural lines. South Carolina has made wonderful strides in the past few years in Agriculture, and we note with pleasure that Clemson College is doing her full share in pushing forward this great work.

We were shown over the land recently purchased by the Trustees, and were delighted with its beauty and adaptability to agricultural pursuits. We congratulate the Board upon securing the services of Prof. Perkins, and feel sure that his work will tell in the near future.

We have found much to commend in the management of the College, and very little to criticize, and feel sure that in the years to come, South Carolina will be prouder than ever of her Agricultural College.

Wishing the Board of Trustees continued success in the patriotic service which they have so generously performed, we are,

Yours very truly,

(Signed): WM. N. GRAYDON,
Chairman, Board of Visitors.

Report of the President of the College.

Clemson College, S. C.

Sept. 15th, 1911.

*Hon. Alan Johnstone, President of the Board of Trustees, the
Clemson Agricultural College.*

Dear Sir: I have the honor to submit herewith the President's Annual Report covering the eighteenth session of the Clemson Agricultural College. This is intended as the basis for your twenty-second Annual Report to the Legislature.

The report covers the fiscal year from July 1st, 1910, to June 30th, 1911.

In my endeavor to give you a comprehensive view of the College and its workings, I have drawn upon the reports submitted to me by the Directors of Departments, upon my personal observation, and upon my intimate knowledge of the spirit and policy of the institution, gathered during fifteen years of service as a member of its faculty.

In order to do full justice, I have deemed it wise to consider not only what has been accomplished, but in some cases to speak of plans now in process of fulfillment.

I have arranged the report, which is lengthy because of the magnitude of the interests dealt with, into four main divisions:

(1) *The College Work*; (2) *The Public Service*; (3) *The S. C. Experiment Station*; (4) *The Outlook*.

PART I.—THE COLLEGE WORK.

General Conditions:

Commencement day, June 13th, 1911, closed a most successful session. The enrollment of 703 was the largest in the history of the College. The graduating class was likewise the largest on record. Eighty-seven young men received their diplomas—forty-four in the Agricultural and forty-three in all the other courses.

Not only was the graduating class almost equally divided between the Agricultural and Engineering students, but the entire student body showed about the same division. And so the hope of its founder to establish an Agricultural and Mechanical College was this year for the first time exactly and fully realized.

Taken as a whole, the College has made very substantial progress. This is particularly true in our efforts to get the College before the people. Our Extension Work has contributed a full share to the desired end. In addition, "The Catechism," the Trustees' Annual Report, the State Fair Exhibit, the visit of Dr. Knapp's Demonstration Agents, the Inspection of the College by the Legislative Committee, by the Ways and Means Committee of the House and the Finance Committee of the Senate, and by the Board of Visitors—all of these agencies and opportunities have made for a better understanding of the magnitude, work and spirit of the College, and given information where formerly prejudice, based on misinformation, had perhaps warped even honest judgment.

The College plant is now rounding into shape. During the year under consideration, and including the past summer, the College has added \$60,000 worth of buildings to its plant. This includes three residences, a \$20,000 dairy building, a \$15,000 dairy barn, an additional story to Barracks No. 1, costing about \$20,000, and piazzas to Barracks No. 2, costing approximately \$8,000. Additional shop and laboratory equipment to the amount of \$16,293.10 has been added, and the purchase of 248.6 acres of land authorized by the Legislature, and costing nearly \$17,000 has been consummated. This land is of the greatest importance, and necessity, on account of the prospective increase along live stock lines. Referring to this land purchase, the Board of Visitors had the following to say:

"We were shown over the land recently purchased by the Trustees and were delighted by its beauty and adaptability to Agricultural purposes."

With the completion of the Dairy Building and Dairy Barn, the Agricultural Department will be in splendid shape. By utilizing the abandoned Experiment Station Barn for a farm machinery building, that important phase of the Agricultural instruction will be provided for.

At the March meeting of the Board, the writer, who for a little over a year had been serving as Acting President, was unanimously elected President.

My relations to the Board of Trustees during my administration as Acting President and as President have been most cordial. As individuals, and without exception, they have been considerate, helpful, and encouraging, and as a Board, I have

found them deeply interested in the welfare and progress of the College, and very willing to accept meritorious suggestions looking to its growth and development.

It is my hope to build up an organization upon a basis of justice, mutual esteem, reasonable consideration, and proper procedure. This is a work that will require time, tact and patience, and I trust that the President of the College may continue to have in this important work the sympathy and active help of every member of the Board. The success of such a policy will depend largely upon the individual attitude of the Trustees towards it. Loyal support of the President of the College, so long as he proceeds along proper lines and in accordance with the By-laws, will bring about results of which every officer and friend of the College may be proud.

I conceive that the Board desires for the College a concentrated presidential government, and have provided for this in the By-laws. I have proceeded upon this theory, realizing that I must assume full responsibility for results as well.

Investigations:

The Legislative Committee, appointed to investigate the condition of the State educational institutions, visited the College in December, 1910, and was shown every reasonable courtesy and attention, and given a full opportunity to see the College in its every detail. The Committee consisted of Messrs. Rogers, McMahon and Vander Horst. Their published report was submitted to the General Assembly last winter, and I need not comment upon it here.

An inspection of the College in behalf of the State Board of Health was made by Dr. Hines of Seneca, and his report has likewise been submitted to the General Assembly. The suggestions contained in this report were wise and helpful, and several of them, notably their recommendations for a new Dairy Barn and Dairy, have been carried out.

The Board of Visitors inspected the College in May, and their report, incorporated herewith, is a most satisfactory, helpful and encouraging deliverance.

The Military Inspection of the College was made by Capt. B. T. Simmons of the General Staff, U. S. A. His report will be referred to later in discussing the Military Department. It is, in the main, quite complimentary.

Acting upon your instructions, I invited the Ways and Means Committee of the House, and the Finance Committee of the Senate to come to the College. Fifteen members of the former and five of the latter came during the spring, and we did everything possible, considering their brief stay, to familiarize them with the College and give them, if no more, a bird's eye view of its accomplishments and a knowledge of its aims. We hope that the information received will be of benefit to the College, and, therefore, to the State.

In addition to these examinations, we had the pleasure of entertaining a Conference of the Rural Ministers of the adjoining counties here on February 13th and 14th, the State Farm Demonstration Agents of the Piedmont Section on February 28th and March 1st, and the State Farmers' Institute on August 31st and September 1st. We appreciate very much the following resolution passed at the meeting of the Farm Demonstration Agents:

"We wish to assure President Riggs and the faculty of the College that we are heartily in sympathy with the work of the institution and we pledge our hearty co-operation with her and her forces in the up-building and development of the Agricultural resources of the State."

We feel that this pledge, coming from a body of workers who have done such loyal and efficient service for South Carolina along Agricultural lines, and who have been trained under such a leader as Dr. Knapp, means much for that development that can only come through the heartiest co-operation and sympathy of the College and all other agencies working for the Agricultural uplift of the State.

Faculty and Officers:

On the whole, the work of the faculty has been loyal, enthusiastic and efficient. A spirit of optimism has prevailed in every Department. Here and there perhaps we have a weak link, which at the proper time must be strengthened or removed. It would be strange if this were not true at Clemson as in every other large organization.

At present, Clemson has in its employ fifty-five teachers, including the President, eight Experiment Station officers, twelve connected with Public State Work, eight miscellaneous, and fourteen salaried employees, making a total of 97 in all.

Clemson has suffered in the past on account of frequent changes, particularly in the faculty of the Agricultural Department, be-

cause, for one thing, our salary scale is below that of other similar institutions. Regarding salaries, the Legislative Committee of 1910 had the following to say:

"Your Committee, however, would suggest that at an early date, the salaries of the Professors should be raised, as they are now on a lower scale than in any other institution, except the salaries for women at Winthrop, which also ought at an early date to be raised."

Enrollment and Classification:

The total enrollment for the session was 703, distributed by classes as follows:

Seniors	87
Juniors	109
Sophomores	153
Freshmen	248
Short Course, Special and Irregular.....	31
Preparatory	80
<hr/>	
Total	703

Of this number, 688 were from South Carolina, and of this total, 131 were Agricultural scholarship students, and 27 were Textile scholarship students. Of the total enrollment in the College classes, 49.1 per cent. were in the Agricultural Courses. This is probably the largest per cent. of students taking full four-year Agricultural Courses in any Agricultural and Mechanical College in the United States.

The total enrollment of the College since its beginning has been 9,961 students, and the total number of graduates, 766, distributed as follows:

In the Agricultural Courses	295
In the Mechanical-Electrical Engineering Course.....	281
In the Civil Engineering Course	97
In the Chemistry and Geology Course.....	10
In the Course of Textile Industry	83
<hr/>	
Total	766
Total enrollment for 18 sessions.....	9,961

The Cost Per Student:

It might be interesting to include at this point a statement showing the income and expenditures since the establishment of

the College. Derived therefrom is the cost per student to the State of South Carolina.

In 22 years, the College has received by Legislative appropriation from the State, but \$95,000. For sixteen years it has not asked for or received one dollar by appropriation. The farmers of South Carolina have paid to the College in round numbers 2.2 million dollars as privilege tax money. Over one million of this is represented in the College plant; it has cost four hundred and seventy-eight thousand dollars to do the analysis and other public work; and with the remaining eight hundred thousand dollars, supplemented with the federal appropriations, and the interest on the Clemson Bequest, nearly 10,000 students have been enrolled and received instruction. For the first twenty-one years of Clemson's history, it cost *South Carolina* on an average, \$80.56 per student per session.

SUMMARY OF RECEIPTS, EXPENDITURES AND THE COST PER STUDENT FOR THE PERIOD OF NEARLY 22 YEARS.

Nov., 1889, to June 30, 1911.

(Taken from Trustees' Annual Reports to Legislature.)

TOTAL RECEIVED FROM SOUTH CAROLINA.

1. From sale of property in Columbia, etc.....	\$ 25,782.27
2. From direct appropriation by Legislature.....	95,000.00
3. From inspection tax on fertilizers.....	2,193,442.95

Total received from State.....\$2,314,225.22

EXPENDED.

1. Value of inventoried visible assets (not including donations from Thos. G. Clemson).....	\$1,033,432.30
2. Expended for Public Work and to comply with enactments of General Assembly, as follows:	
(a) Fert. Inspec. and Analysis....	\$251,670.96
(b) Ext. Work and Farmers' Inst's ..	26,288.19
(c) Vet. Inspec. & Tick Eradicat'n ..	41,055.09
(d) Entomological Inspection ...	9,979.84
(e) Coast Experiment Station....	40,180.97
(f) Agr. and Text. Scholars'ps, etc	97,131.22

(g) Pop. Bulletins & Fair Exh'bt	8,481.37	
(h) Co-operative Expt'l Work ..	3,582.95	
		478,370.59
3. Operating expenses of College—18 sessions..		802,422.33
Total expenditure of State Funds.....	\$ 2,314,225.22	
Total enrollment for 18 sessions.....	9,961	

Cost Per Student Per Session to South Carolina:

(\$802,422.33 divided by 9,961).....\$80.56

INCOME FROM ALL SOURCES AVAILABLE FOR OPERATING COLLEGE.

1. Amount of Fertilizer Tax (see 3 above).....	\$ 802,422.33
2. Federal funds (Morrill, Nelson and Landscript) .	403,254.00
3. Interest on Clemson Bequest.....	74,949.64
4. Tuition	36,476.41
Total	\$1,317,102.38

Cost Per Student Per Session to All Sources.....\$132.32

During the past session, 1910-1911, the operating expenses of the College were \$154,548.10. Of this amount, \$46,304.97 came from the Federal Government, the Clemson Bequest, etc. This would give the *operating expense* of the College as paid from the Fertilizer Tax, \$108,243.13. Using this as a basis, and dividing by the number of students enrolled, (703), we have the cost to South Carolina per student at Clemson during the past session, in round numbers, \$154.00. This is a very low figure for a College giving the kind of education which is furnished at Clemson, and including the operation of costly laboratories and the opportunity to follow one of many, rather than one of few, courses. I doubt if the above figures can be equalled at any technological college which offers equal opportunities for selection of work, and in which the laboratory materials are furnished by the State instead of being paid for by the students, as is customary at many Colleges.

The parent is concerned not so much with what he pays to Clemson's support in the way of fertilizer tax, as in the actual cost to him of keeping his boy at Clemson for a session. At many institutions where the cost to the State is little more than it is at Clemson, the cost to the parent is from three to five times as great. At Clemson, a student is boarded for \$6.50 per month. His laundry, light, heat, water, etc., cost him \$2.00 per month

additional, making a total for living expenses of \$8.50 per month. The medical fee is \$5.00, and the incidental and other fees \$8.00 for the session. His uniforms—three coats, two pairs of trousers and a cap—cost less than \$30.00. His books and other necessary equipment cost approximately \$25.00. The total is less than \$150.00 for the entire session.

Legislation:

During the last session of the General Assembly, the following bills bearing upon the interests of the College were passed:

(a) An Act to require the analyzation of fertilizers without requiring the purchaser to give the name of the manufacturer, or the per cent. of ingredients contained. (This Act is in no sense embarrassing to us, because it merely legalizes what was for many years the practice of the Fertilizer Department.)

(b) An Act to authorize and empower the Board of Trustees to establish two or more Experiment Stations.

(c) An Act to make the scholarship requirements uniform in all State institutions. (This Act puts the power of recommending appointees in the hands of the faculty instead of in the hands of the County Board of Education, and is in every way a desirable improvement.)

(d) An Act to give scholarships to Jerry Moore and Archie Odom.

Finances:

The Treasurer's report, which is appended, gives detailed information in regard to the finances of the College.

The following is a condensed statement of receipts and expenditures for the fiscal year, June 30, 1910, to July 1st, 1911:

RECEIPTS.

From tag tax on fertilizers (refunds deducted)	\$264,374.08
Interest on Clemson Bequest	3,512.36
Tuition from cadets	3,200.00
Landscript Fund (U. S.)	5,754.00
Morrill and Nelson Funds (U. S.)	22,500.00
Sales, interests, rents, etc.	11,338.61

Total Income \$310,679.05

EXPENDITURES.

For Public Work (partly required by State Laws) . . . \$	81,598.09
For operating College (salaries, materials, etc.)	149,759.77

For additional shop and laboratory equipment.....	16,293.10
Buildings and permanent improvements.....	42,791.36
Real estate.....	16,825.50
Deficit on Cadet Subsistence fund (for session '09-'10)	4,788.33

Total Expenditures	\$312,056.15
Balance brought from '09-'10.....	\$53,974.20
Balance—overdraft—1910-'11	1,377.10

Reserve carried forward July 1, 1911.....\$ 52,597.10

The above reserve is necessary to help carry the College from July 1st until the receipts from the sale of fertilizer tag tax begin to come in.

THE STUDENT INTERESTS.

The Commissary Department:

The Commissary Department, which has to do with the feeding, clothing, and care of the students, represents a business of over \$83,000. For the expenditure of this Department, the President and Secretary-Treasurer are responsible. The contract for uniforms is let by the Finance Committee, upon sealed bids submitted at a specified time.

The present method of purchasing commissary supplies is as follows:

A list of the material needed, representing about three months' supply, is sent out to firms that care to compete, with the request for written bids. These bids are opened upon a certain date, the samples inspected, and the business given to the most favorable bidders. The Steward of the mess-hall participates in the buying only as a judge of quality. The entire transaction in connection with these purchases is in writing. All firms are warned against sending a personal representative to solicit any of this business, and the bid of any firm violating this condition is thrown out of the competition.

Daily reports are required, showing both the quantity and quality of meals served in the mess-hall, and careful monthly statements and inventories are compiled.

For the four years prior to the session covered by this report, there has been an annual deficit of approximately \$5,000, which had to be paid out of the college funds. Under our new system,

whereby a close check is kept upon all use of materials and all expenditures, the session just closed showed a credit balance of receipts over expenditures of \$5,313.06. This balance will be kept to the credit of the cadets and used in their behalf. The experience gained this session will enable us to come out more nearly even next session. We have no desire to show a balance.

The Commissary Department is operated on a strictly business basis, paying for everything received from the farm, dairy and gardens, at regular market prices, and paying the salaries of all its officers.

The Legislative Committee of 1910 predicted that at the low charge for board, it would be impossible to come out even, if all legitimate charges were included. However, the results disprove the prophecy of the Committee, and certainly all legitimate expenses, salaries, etc., were included. In their report, the Committee state that the charge for board is \$6.00. This is incorrect—the charge is and has been for many years \$6.50.

The general testimony of the cadets is that the fare during the past session was better in variety and amount than heretofore. Regarding this feature of our work, the Board of Visitors made the following comment:

“We are pleased to report that the Boarding Department is now self-sustaining. We congratulate the management of that department upon the fact of it now being self-supporting. The Board of Visitors had the pleasure of dining with the cadets during our stay, and found that the fare was abundant, well cooked and well served. It is wonderful, the cheapness with which this department is conducted, and shows what can be done by intelligent and systematic management. Students can live here as cheaply as at home, and get an abundance of substantial and well-cooked food. We found that the health of the students was excellent, and showed that they were not suffering from the lack of abundance of good food.”

Important improvements have been made in the dining hall during the summer, and the laundry has been equipped with additional machinery. A better location and larger building for the laundry is needed in the near future.

The heating, lighting, water and power are furnished from the Central Power Station, half the cost of operating being charged against the Cadet Commissary Department.

Class Co-operative Committees:

The Class Co-operative Committees, inaugurated last session, continue to be of great assistance to the President, and a safeguard against internal troubles. I have continued my occasional chapel talks to the boys, and have found prompt and sympathetic response to every appeal to their college loyalty, good sense and good breeding. I have sought to draw a sharp distinction between boyish pranks and crimes, and have sought by personal work to prevent, so as not to have to punish.

I have sought, too, to reach the parents and elicit their help and sympathy in the boys' behalf, and especially to reduce that great number who grow discouraged and fall by the educational wayside. While work of this nature increases greatly the correspondence of the President's office, it is work that ought to be done, and I am striving to do it.

Health of Students:

I regret to have to report to you that on February 12th, Cadet W. R. Chavis of Marlboro County died of pneumonia, following a severe attack of grippe and measles. This is the first death that we have had in the corps of cadets in the past five years.

In spite of our poor hospital facilities, Dr. Redfern, our competent Surgeon, maintains his fine record for efficient service. At the opening of the session, every cadet who needed it was vaccinated, and as a result, we have had little fever and no panic, in spite of repeated rumors of smallpox in the vicinity. The health of the student body has been good, except for colds and coughs which have been quite prevalent since Christmas. Our annual visitation of measles and mumps has been less severe than usual. In his report, Dr. Redfern calls attention to the urgent need of better hospital facilities, and this need is emphasized in the report of the State Board of Health. This is a matter to which we should give attention as soon as possible.

Expenses:

Every effort has been made to remove from the students temptations to spend money. Civilian clothes are absolutely barred at all dances, society celebrations, etc. Permits to leave college are held down to the fewest possible number, only a good

reason, such as a written dental or medical appointment, being accepted in most cases. I have refused to be guided by requests from parents unless the reasons given appeal to my judgment as sufficient to justify the loss of time from college duties. In almost all cases, I have found parents grateful for protection along this line.

The Religious Life:

The religious life of the students continues to be a cause for congratulation. The Y. M. C. A. has enrolled over 300 members, and an equal number belong to the Bible Study Classes. We are now opening chapel service with song, and have introduced the custom of offering thanks in the mess-hall.

The annual appropriation of \$3,000 made by the Board for carrying on the religious work of the college is expended as follows:

Five hundred dollars is paid on to the salary of the four resident ministers, representing the Baptist, Episcopal, Methodist and Presbyterian denominations; \$500 is used to bring to Clemson ministers of other Protestant denominations not represented by the resident ministers, and \$500 is paid to the salary of the resident Y. M. C. A. Secretary, who lives in barracks and works with the students.

The student honor system, which is intended to prevent unfair methods on examinations, is still working well, and will, I trust, soon be extended to every moral question.

It is my purpose to inaugurate next year the student advisor system that is in use at some of the larger universities and colleges of the country. The essentials of this system are that every new student is assigned to some member of the faculty, who acts as his personal advisor in all matters pertaining to his college and personal welfare. The faculty member selected should preferably be one of his teachers. Such a system has great possibilities for good, because the average boy comes to college without a definite idea of what he expects to do, and needs advice in his choice of course. He needs also personal encouragement and sympathy—particularly at the beginning of his college life.

Recreation:

I feel keenly the lack of proper facilities for student recreation and rest. We have plenty of work, but opportunities for

reasonable recreation and amusement are very limited. It needs to be fully understood and appreciated that play is just as necessary to a successful college course as is work. With pleasant surroundings, with something to make him happy, a boy does better work in his classes, and disciplinary troubles disappear. No one not continually in touch with college boy life can appreciate at its true worth the great good derived from baseball and football. These sports are conducted, not as many think for the benefit of the few who participate, but for the recreation of the hundreds who every afternoon go out into the fresh air, and yell and laugh and dismiss work from their minds. The intercollegiate contest is merely a necessary incident in the conduct of college sport. It is the entertainment furnished every afternoon for 120 days during the fall and spring months that justifies the existence of athletics in every properly organized college. Many a boy, through his interest in these sports, continues in college and goes on to graduation, who would otherwise, out of very homesickness and restlessness, get into disciplinary trouble, or give up his education and go home. I want the Board to realize the importance of this field which has been neglected, and help to give our boys more opportunities for pleasure.

Within a few years, we should have a splendid gymnasium with swimming pool, bowling alleys, provisions for dancing, roller skating, and every other possible device to attract a boy to play when his work for the day is over. Play should not encroach upon study, nor should study encroach upon play. In the successful and well-rounded college, each must have a legitimate and important—though not equally important—place.

THE DEPARTMENTS.

Academic Department:

This department embraces the subjects of Mathematics, English, History and Physics, which subjects are required of all students in college, regardless of their course. The subject of bookkeeping is taught in the Division of Mathematics.

The work of this department should become more and more important, as the idea gains ground that even in technical education, general culture and literary ability are important if not indispensable assets. Ability to write and speak the Eng-

lish language correctly cannot be discounted in any college course worthy of the name. To this work, more time and importance must be eventually attached.

No changes have taken place in the faculty of the department during the year covered by this report.

The Chemical Department:

The work of the fertilizer analysis performed by this department will be considered later under the head of State Work. The work of instruction has been up to the usual high standard of excellence.

The resignation of Col. M. B. Hardin, who for nearly twenty years has served the college and the people of South Carolina with fidelity and zeal, became effective September 1st, and Dr. R. N. Brackett was made Acting Director. At the close of a successful session he was elected Director. Dr. Brackett has been connected with the department as second in rank ever since its organization in 1891. His long service, his scholarly and technical preparation, his ability and experience as a teacher, and his intimate knowledge of the fertilizer work, and his familiarity with the methods and ideals of his distinguished predecessor give him at the very outset assurance of success.

Prof. D. H. Henry, who for some years past has filled the position of third in rank in the department, was promoted to the position of Associate Professor of Chemistry.

The following changes in the faculty and officers of the department took place:

Mr. G. F. Lipscomb of Alabama was elected Assistant Professor of Chemistry, to succeed Mr. R. A. Hall, resigned.

Dr. D. J. McAdam, Jr., of Pennsylvania was elected Assistant Professor of Chemistry, to succeed Prof. Henry, promoted.

Mr. H. J. Smith of Mississippi was elected Assistant Professor of Chemistry, to succeed Dr. McAdam, resigned September 15th.

Mr. C. W. Rice of South Carolina, a Clemson graduate of the class of 1908, was elected Assistant Chemist in the State Work, to succeed Mr. L. O. Watson, resigned.

Mr. J. E. Toomer of North Carolina was appointed Assistant Chemist to fill the place of Mr. J. H. Mitchell, who was away on a year's leave of absence.

The Engineering Department:

The work of the Engineering Department has been efficient and up-to-date. The department faculty of fifteen members is a splendid body of men devoted to the interests they represent, and efficient in the performance of duty. During the session, Prof. S. B. Earle, Professor of Mechanical Engineering, was made Acting Director to take the place of Former Director W. M. Riggs, who was serving as Acting President, and after March, as President. Prof. Earle filled the position in a very satisfactory manner, and at the close of the session was elected Director.

The following are the only changes in the faculty of this department:

Mr. J. F. Allison of Maryland was elected as Instructor in Forge and Foundry Work, to succeed Mr. Z. R. Lewis, resigned.

Mr. G. H. Folk of South Carolina, a Clemson graduate of the class of 1907, was elected as Instructor in Wood Work, to succeed Mr. J. C. Littlejohn, who for a while assisted in the Electrical and Mechanical Engineering Division, and afterwards accepted the position of Assistant to the President.

To the Engineering Department is entrusted the heat, light and water interests of the college. Prof. Lee, head of the division of Drawing and Designing, is architect for the college, and has supervision of the erection of all important buildings.

Prof. Lee is the author of a bulletin on school buildings, which, through the agency of the State Department of Education, has been made of great service to the people of the State.

The Military Department:

The Military Department under our commandant, Capt. M. B. Stokes, is efficient in producing those results for which the military system exists at Clemson—namely, to require in barracks order and quiet during study hours, to train young men in elementary military duties, and above all, to inculcate qualities of manliness, honor, courage, courtesy and obedience.

Of the total enrollment of 703, 679 performed active military duty. The cadets were organized into two battalions of six companies each. This increase in the number of companies from eight to twelve has been a distinct improvement, particularly in effect on the discipline in barracks.

The encampment of the cadets at the State Fair in Columbia was in every way creditable to the college, and was enjoyed and appreciated by the cadets.

On April 12th, Capt. B. T. Simmons of the General Staff, made an inspection of the corps, and I quote the following complimentary sentences from his report:

"The rifles were in excellent condition." "The clothing was neat and well fitting." "Setting up exercises, manual of arms and company drills in extended order, fair. Battalion and company drills in close and extended order and guard mounting good." "The quarters, mess-hall and store rooms were in good condition." "The office of the Military Instructor is well equipped, and all records are complete and well arranged."

As stated in a previous report, I have long felt that we rely too much upon the Military Department to accomplish everything in the way of discipline—that we have neglected to appeal to the sentiment and reason of our boys, and to enlist their help in our efforts to train them. I have made the experiment of discussing with the student body any matter that needs correction. I have always found an instant and sympathetic response, and full recognition by the students of their responsibility for the tone and standing of the college.

I have organized in each class a committee of five elected by the class, and to be known as Co-operative Student Committees, and through whom the President can work to correct those conditions which the military arm alone cannot reach.

For the current session, the Military Department has been greatly strengthened by the addition of an assistant to the Commandant. The increase in number of dormitory rooms and students made this addition necessary, and the college was fortunate in obtaining Capt. S. L. Duckett, a Citadel graduate, who fills the position in a very acceptable manner.

Mr. J. M. Gasque, Secretary to the Commandant, resigned in April, and was succeeded by Mr. J. H. Hilton.

In closing these comments on the Military Department, I repeat the compliment of Capt. Stokes which I have paid him in every report to you. He is enthusiastic and conscientious, kindly in his attitude towards the cadets, a satisfactory officer, and one with whom it is a pleasure to be associated. I regret that his detail at the college lasts but one year longer.

The Textile Department:

The Textile Department during several years past shows a steady increase in attendance. Twenty-seven students were enrolled during the past session.

In September, Mr. D. E. Earle, Assistant Professor of Carding and Spinning, resigned to accept a position with the Government, and his position was filled by the election of Mr. Fred Taylor of England.

Considerable addition has been made to all the Divisions of the Department by generous donations from the manufacturers of cotton mill machinery. These donations aggregate about \$9,000, and include four looms from the Draper Co., a drawing frame, card, doubler and lap winder from the Saco-Petee Co., a sliver-lapper, ribbon-lapper, and comber from the Whiting Machine Works; a copper dye kettle from the Butterworth Co., and in addition, small miscellaneous attachments. These gifts are not duplications or replacements of present equipment, but represent the most recent improvements in cotton mill machinery. The greatest present need of the department is a slasher, which will probably have to be bought in the near future at a cost of about \$1,000.

The department is getting into splendid shape to do effective work, and I look confidently to see it realize a success which, at first, manufacturing conditions in the South did not warrant. The Director and his two assistants have, at considerable personal sacrifice, assisted with the evening school of the Y. M. C. A., organized in connection with the Monaghan Mills of Greenville.

The Agricultural Department:

The Agricultural Department has continued to receive the special attention of the Board, and liberal appropriations for extending and improving its work. The great need of the department for more class room space has been relieved by the new dairy building and the removal of the Veterinary Division from the Agricultural Hall to the Veterinary Hospital.

Changes in the curricula of the Agricultural Courses have resulted in improvement, and the instructional work has been more satisfactory. The equipping of the department has proceeded along practical and economical lines, and a more harmonious spirit than heretofore has been apparent.

During the year, the Animal Industry interests of the college and Experiment Station were combined, as were also the Entomological interests, Prof. Archibald Smith being placed at the head of the Animal Husbandry combination, and Prof. Conradi at the head of the combined Entomological forces. The wisdom of these combinations has been made manifest in the good work accomplished during the past half session.

Quite a number of changes in the faculty of the department occurred during the session. I believe that in almost every case a strengthening of the teaching force resulted.

Mr. H. C. Thompson of Maryland was elected as Associate Professor of Horticulture, to succeed Prof. Mooring, who was not re-elected at the end of his first year of service.

Prof. J. G. Hall of Missouri was elected Associate Professor of Botany, to succeed Prof. Knight, who likewise was not re-elected.

Mr. A. B. Massey of Virginia was elected Instructor in Bacteriology, to fill a new position created at the July meeting of the Board previous.

Dr. G. C. Crampton of Alabama was elected as Assistant in Entomology, to succeed Mr. W. A. Thomas, transferred to the Experiment Station.

Mr. Archibald Smith of Canada was elected first as an Assistant in Animal Industry in the Extension Division, to succeed Mr. Jackson, resigned, and was afterwards made Associate Professor of Animal Husbandry and Dairying, and put at the head of the combined Animal Industry forces.

For the next session, the Board has added to the faculty of the department the following officers:

An Assistant in Entomology, and an Assistant in Horticulture, whose special work will be along Extension lines; a Second Assistant to the State Veterinarian, and an Assistant in Agronomy and Farm Machinery.

The position left vacant by the resignation of Prof. Nourse of the Animal Husbandry Division has not yet been filled.

Under the guidance of the new Director of the Department, Prof. W. R. Perkins, the department made substantial and satisfactory progress, and it is deeply to be regretted that the announcement of his resignation, to take effect in the near future, has been received. Prof. Perkins leaves to enter the service of one of the large syndicates planting cotton on an

extensive scale in Mississippi, at a salary entirely beyond our reach. This is a species of competition which will, I fear, in the near future, become a serious matter to the agricultural colleges of the country.

At this point I should note also the resignation of Prof. Barrow, who for the past two years has been Superintendent of our Division of Extension Work and Farmers' Institutes. Under his supervision, much good work has been accomplished, and his many friends in the State, as well as at the college, will regret his leaving. Family reasons necessitated Prof. Barrow's making his home in Texas.

The resignation of Prof. Perkins and other officers of the department emphasizes the need of increasing the salaries of our department and division chiefs to a point where we can compete with other colleges and commercial enterprises. The department will never make the progress that we desire, and which the people of the State will demand, until we have a greater fixity of tenure. I have already referred to the opinion of the Legislative Committee on this subject.

While not agreeing entirely with the correctness of their opinion as applied to our faculty, as a whole it certainly does apply with considerable force to the principal teachers and officers in our Agricultural Department.

The Farm:

The conditions upon the farm have been greatly improved during the past year. New fences have been built, new territory brought under cultivation, and a general improvement made in the appearance of the barns and out-buildings. Despite the extremes of the season, a splendid crop of corn was harvested on the two large hundred-acre bottoms.

At the end of the year, Mr. J. P. Lewis, who for many years has been foreman of the farm, resigned that position, and is now in charge of the convicts and work on the roads and campus. Mr. L. B. Brandon, a Clemson graduate of several years back, and a thoroughly practical farmer, has been made foreman of the farm. The improvements begun during the last year of Mr. Lewis' administration will be continued, and extended until the Clemson farm will represent the very best practice and the very best appearance of any farm in South Carolina. Nothing short

of that is the ambition of the Trustees and the college administration.

The Accounting Department:

Under the supervision of Dr. P. H. E. Sloan, Secretary-Treasurer, our financial administration has commanded the respect and confidence of the citizenship of the State. Connected with the college from its beginning, his reputation for honor and honesty has been to the college an asset of incalculable value. In his twenty-two years of service no auditing committee or other supervisory power has found anything to criticise. In April, Mr. W. C. Tucker, who for several years past had been our very efficient bookkeeper, resigned to accept the presidency of the Carolina Audit and System Company. Mr. Tucker has given the college splendid service, and to his originality are due many novel features of our present excellent system of bookkeeping.

Upon Mr. Tucker's retirement, Mr. S. W. Evans, Assistant Bookkeeper, was, upon my recommendation, promoted to the position of Bookkeeper, and Mr. F. L. Carroll took the position of assistant. Our method of bookkeeping provides for keeping an account, not only against each division of the college, but against each separate item of appropriation in the division. This greatly multiplies the work, but puts a careful check upon all expenditures. No monies can be expended except upon a specific item of appropriation made by your Board. I attach to this report the annual financial statement of the Secretary-Treasurer, and also a report of the audit of the books of the Treasurer made by Col. D. H. Wise of Aiken, and Mr. J. B. Haltiwanger of Greenwood.

The Preparatory Class:

The Preparatory Class is open only to those country boys who are unable to get preparation at home for entrance to the Freshman Class. Admission to this class is denied boys who come from towns or from those country communities where reasonable school facilities are available.

The teaching in this class devolves upon a head-master and an assistant, who have no work in the college classes.

On September 1st, Assistant D. T. Kinard resigned, and his place was filled by the election of Mr. B. J. Wells, a school

teacher of long experience and excellent qualifications for the work.

The Library:

We have made a good start toward developing a first-class Library, especially along technological and scientific lines. Already we have 16,488 bound volumes, and over 9,000 pamphlets. The Library force consists of a Librarian and an Assistant, and every effort is made to encourage students to learn to use the Library for technical as well as literary work.

During the past summer the space devoted to the Library has been more than doubled.

Public Utilities:

Under this heading are included the work of construction and repairs, the heat, light and water and sewerage system, the college printery, and campus and roads. These represent as it were the municipal features of the college.

The Construction and Repair Division supervises the erection of buildings, and makes all repairs and additions.

The Heat, Light and Water Division maintains the lighting and power circuits, furnish the necessary steam heat for barracks and the college buildings in which classes are held, pumps and distributes the water supply, amounting to nearly 100,000 gallons daily, and supervises the proper workings of the sewerage system, with its accompanying sanitary installations. Water and light are furnished to the members of the faculty and officers of the college, and charged for on a regular meter system.

The College Printery is well equipped with a linotype, printing press and other equipment. It publishes the college catalogue, the Treasurer's annual reports, the Fertilizer Bulletins, Popular Bulletins, etc.

The work on the campus and roads has really just begun in earnest. In regard to this feature, the Board of Visitors have the following to say in their report:

"We were also pleased to note that the grounds have been improved since our last visit, by the putting down of a number of cement walks over the grounds. We think that the money to do this has been well spent, as we regard the grounds as a very valuable asset to the college. We think further improvements

along this line would be of material benefit to the institution."

Acting upon this suggestion, we have perfected an organization for carrying on this work on a more extensive scale than heretofore. The introduction of the Work-Boy course, thereby furnishing labor for the farm, has freed about fifteen convicts for the work, and a well thought out plan of improvement is under way. Mr. J. P. Lewis, heretofore foreman of the farm, has been put in charge of this work, and in the course of the next few years we hope to make the naturally beautiful campus at Clemson a model for the improvement of public grounds. Hitherto, the work on the campus has been done at odd times when labor and mule power could be spared from the farm, and this accounts in part for the slight progress that has been made.

PART II. CLEMSON'S PUBLIC SERVICE.

General Statement:

The duty of the college is but half performed if its work stops with the education of its students. It has the additional duty of carrying the college to the people. Without study, few realize the magnitude of Clemson's public service, or how large a part of the fertilizer tax is thus consumed. These activities include the following lines:

Agricultural and Textile Scholarships.. . . .	\$16,299.68
Fertilizer Inspection and Analysis.. . . .	30,384.17
Extension Work and Farmers' Institutes.. . . .	11,124.70
Cattle Tick Eradication.. . . .	8,808.41
Veterinary Inspection.. . . .	2,676.64
Branch Experiment Stations.. . . .	5,712.47
Co-operative Experimental Work.. . . .	3,582.95
Entomological and Nursery Inspection.. . . .	1,458.43
State Fair Exhibit.. . . .	731.54
Manufacture of State Flags.. . . .	374.10
Miscellaneous.. . . .	445.00

Total.. . . . \$81,598.09

The Board of Visitors say in their report of May 4, 1911:

"We are pleased to note that the Board has seen fit to adopt several of the recommendations made by us at our last meeting, and that the activities of the college are constantly enlarging by

getting in closer touch with the agricultural life of the State. While the total income of the college, owing to the heavy sales of the fertilizers, has increased considerably over last year, almost the whole of the increase has gone directly back to the farmers in the shape of larger appropriations for public work—that is, work by the college directly affecting the agricultural welfare of the State.”

Agricultural and Textile Scholarships:

The total number of scholarship students was 158, divided as follows:

In the Agricultural Courses.....	131
In the Textile Courses.....	27
	—
Total	158

The law has been construed to prevent scholarship students taking any but the Agricultural and Textile Courses, and this is wise, in view of the fact that no financial stimulus seems necessary to fill the Engineering Department with students of the very strongest type. The uniform scholarship law enacted at the last session of the General Assembly puts into the hands of the faculty the power of making the recommendations as to the award of the scholarships to the State Board of Education. Heretofore, this power resided in the hands of the County Board of Education. Believing that as a pedagogical proposition, the boy who comes from the farm is better qualified to pursue successfully an Agricultural Course, the faculty expect, other things being at all equal, to give the preference to the country boy. To offset in part the advantage which superior school facilities give to the town boy, an examination on practical agricultural affairs will be included along with the other school branches. Also, questions to determine the number of years the applicant has lived on a farm will be included.

As a result of these methods, it was found, when the names of the winners were announced by the State Superintendent of Education, that out of 57 four-year Agricultural scholarships awarded, 42 had gone to boys from rural homes.

The new law is unquestionably a great improvement over the old one. The expenditure on scholarships was \$16,299,68, no

part of which is paid by State appropriations. The entire amount comes out of the current funds of the college.

I believe it is unnecessary, and perhaps would be unwise, to increase at the present time the number of four-year scholarships at Clemson. The college is full—*half* the students are *now* taking the Agricultural courses, and unless the total capacity of the college were increased by additional dormitory capacity, etc., an increase in the number of scholarships, *unless open to all courses*, Engineering as well as Agricultural, would congest the Agricultural Department, making the work less efficient, and tend to reduce the number of students in other departments that are now well equipped and doing good work. If scholarships are added, they should be for one session, rather than for four years, and confined to Agricultural study.

Fertilizer Inspection and Analysis:

For the purpose of inspection, the State is divided into twelve districts, each district presided over by an inspector with instructions to visit frequently railroad stations, cross-roads and other points of distribution. They are instructed to be vigilant to see that all fertilizers are branded as the law requires, and to exercise the greatest care in drawing samples. A Chief Inspector, Mr. W. B. West, supervises the work of the district inspectors. The sale of fertilizers was the largest in the history of the department, the total receipts (representing 1,048,806 tons of fertilizer and cotton seed meal) was approximately \$265,000. In all, 1,157 different brands of fertilizers were sold in the State, 2,087 official samples were collected, and 119 farmers' samples.

The fertilizer samples are analyzed by the Chemical Department. During the year ending July 1st, 1,605 samples were analyzed as compared with 1,188 of the previous year; 205 samples fell below the commercial value as shown by the guarantee; 102 of them being below the 3 per cent. limit prescribed by law. Two hundred and thirty-five (235) of the samples were below the guarantee in one or more constituents, but this deficiency was made up in full by an excess of other valuable ingredients. Of the 1,406 samples of mixed fertilizers, phosphoric acid and cotton seed meal, 1,224 were of the grade claimed for them by their makers, 154 were of higher grade than claimed, and only 28 of a lower grade than claimed. This

is an even better showing than for the year before, and shows that the rigidity of the inspection and analysis is bringing results by giving to our farmers protection in their purchases of fertilizers, and to honest manufacturers an incentive to keep their standards up to a high degree of excellence.

The analytical work of the Chemical Department has been characterized by the usual care and accuracy for which it has become proverbial. Mr. H. M. Stackhouse, the Secretary of the Board of Control, is vigilant and efficient in having sampled all goods offered for sale in the State.

A complete report of the Secretary and of the Chief Chemist is attached to, and made a part of, this report.

The cost of the work of Inspection and Analysis for the year was \$30,384.17.

Work of the Extension Division:

The increase in the work of this division is probably the most notable feature of the year's work.

- Through the weekly press bulletins sent to every newspaper in South Carolina, brief and timely knowledge in simple form has been disseminated. The correspondence courses have met with reasonable success, and have been of special value to the school teachers, anxious to equip themselves to introduce the study of Elementary Agriculture into their schools.

The Live Stock Demonstration Train covered practically the entire State. It travelled 1,000 miles, made 22 stops, and reached approximately 22,000 people. The train was composed of seven cars, carried five lecturers, and nearly \$2,000 worth of live stock, and in addition to that subject, gave instruction in corn judging, soil fertility and domestic science. Two coaches were devoted to the Domestic Science work, conducted by Winthrop College under the immediate supervision of Miss Hyde.

The thanks of the college are due the Southern, the Seaboard Air Line and the Atlantic Coast Line Railroads, who furnished the rolling stock and operated the train over their lines free of cost to the colleges.

Seventy-six Farmers' Institutes were held during the winter and summer months. The attendance at these institutes, holding morning and evening sessions, was approximately 27,000. Ten "movable school" sessions had a total attendance of 2,000, and

nine institutes held in connection with picnics, reached 2,500 more. Fourteen lecturers were used in this work, the other divisions of the Agricultural Department and the Experiment Station contributing liberally of their forces to this work. The Round-up Institute at the college in August held nine sessions, the average daily attendance being about 200. In addition to the regular institute work, our lecturers have assisted at three five-day teachers' institutes, and acted as judges at numerous County Fairs, as well as at the State Fair in Columbia.

Just before his death, Dr. Knapp proposed a co-operative arrangement for carrying on the Boys' Corn Club work. This arrangement has been perfected, and our Mr. C. B. Haddon placed in charge of the work, with his headquarters at the college.

Substantial increases in appropriation have been made to this division for the next session. The force has been added to, and it is the hope of the Trustees to make the benefits of Clemson College reach every farm home in South Carolina.

State Veterinary Inspection and Cattle Tick Eradication:

Dr. M. R. Powers, head of the Veterinary Division of the Agricultural Department, is also State Veterinarian, charged with the enforcement of the State Veterinary and Quarantine Laws. With his assistant, Dr. Feeley, Dr. Powers has done valuable work in controlling contagious outbreaks, as well as in protecting our people in the purchase of live stock.

A recent Act of the General Assembly requires all shipments of cattle coming into South Carolina for work, dairy, feeding or breeding purposes, to be free from disease, and accompanied by a health certificate issued by some authorized State or Federal Veterinarian. It is fortunate that South Carolina, too, has adopted measures for the protection of her live stock, as it will necessarily follow that States without protection will become the dumping ground for diseased live stock that cannot be sold in other States.

The extent of animal importation in the State is shown by the following figures taken from the State Veterinarian's report:

For comparison, the figures for the previous year are given, and serve to emphasize the awakening interest of our people along live stock lines.

	1909-10	1910-11
Horses and mules..	23,990	27,811
Cattle for dairy and breeding purposes, (tested)..	126	119
Cattle for feeding..	2,113	6,786
Hogs for breeding..	249	2,469
Sheep and goats..		94

The report of the State Veterinarian gives full information as to contagious outbreaks reported and investigated. The following items are of general interest:

The test for tuberculosis was applied to 367 dairy cows in the State, and only sixteen of this number were found affected with the disease.

The method of protecting hogs against cholera by the injection of serum, this work being carried on in conjunction with the United States Bureau of Agriculture, is declared by the State Veterinarian as satisfactory. Provision has been made to continue and enlarge this important protective work.

The State Veterinarian answers hundreds of letters, giving advice as to treatment of non-contagious diseases. This correspondence, together with the filling in of health certificates, the recording of quarantined premises, and the correspondence connected with the work of cattle tick eradication, makes the duties of the State Veterinarian heavy and exacting. It gives me pleasure to testify to the admirable manner in which this work is performed.

Cattle Tick Eradication:

Encouraging though slow progress, due to the lack of active co-operation by cattle owners, and inadequate laws, has characterized this important work which is being carried on in conjunction with the United States Bureau of Animal Industry. The work has been in progress since July 1, 1907, and four Counties, Oconee, Pickens, Greenville and Anderson, have been released from federal quarantine. It is expected that by Dec. 1, 1911, Spartanburg, Laurens, Union, Cherokee, Greenwood, and a portion of Abbeville and York Counties, will be added to tick-free territory.

"The release of this territory will place nearly 7,000 square miles of South Carolina above the federal quarantine line, and

open up the best cattle markets in the world to twelve Counties in the State."

\$8,804.41, considerably more than required by law, has been expended by your Board in the full realization that the cattle tick curse stands in the way of substantial growth of an important industry in South Carolina. In this work have been engaged not only a State Veterinarian, Dr. Powers, and his assistant, but four men paid by the federal government, and ten inspectors paid by the college out of its current funds.

State Entomological Work:

The importance of insect control is becoming every year more fully realized. During the past session, Prof. A. F. Conradi, Station Entomologist, was made State Entomologist, and with the assistance of Messrs. W. A. Thomas, W. P. Gee, and J. A. Dew, has carried on in a most efficient manner the work required by law, and in addition, important original investigations.

A full account of the work is given in the report of the State Entomologist, under the following heads:

Inspection and Certification of S. C. Nurseries.

Nursery Quarantine Work.

Boll Weevil Quarantine.

General Insect Control.

The Problem Before Us.

I recommend this interesting report to your consideration. The cost of the above work for the past year was \$1,458.43.

Branch Experiment Stations:

The Coast Station, "Drainland," near Summerville, consisting of about 300 acres, donated by the Southern Railroad, has been an object lesson of what can be accomplished by draining in the coastal region of our State. One hundred acres have been drained and cleared, and last year produced as fine crops as were to be found in South Carolina. The foreman of the Station, Mr. Garrison, under the direction of the Experiment Station experts, has done a splendid piece of work, and there can be no doubt but that the result of our experiments at Drainland will in the near future lead to the drainage of large areas of our coastal plain. Capital will be available for this work, since a practical demonstration is at hand to show the profitable results of such an investment. In this way, our Coast Station

will, through its influence, eventually add millions to the wealth of South Carolina by increasing immensely its productive area.

Having shown that drainage and proper fertilization will result in splendid crops, it is now our purpose, as soon as practicable, to withdraw the convicts from this Station, and without discontinuing our experiments on a few acres, demonstrate that the farm is not only successful but profitable.

Referring to the experiments that are being conducted at the Station, I might say that in addition to ordinary field crop experiments, our Horticulturist and Animal Husbandryman are beginning there a series of important side lines. It is our purpose, in co-operation with the federal government, to devote a tract of land, which is grown up in native pines, to forestry experiments.

I feel that the work at Drainland is one of the very best illustrations of how the college can be made to serve the people of the State.

The plans for the establishment of a similar branch Experiment Station in the Pee Dee Section are now being worked out, and after this station has been completed, it is hoped to establish one in the Sand Hill Section, provided the income of the college permits of so doing. Branch Stations are necessarily expensive adjuncts, because development and experimental work always come high.

Co-operative Experimental Work:

A new line of public service has been inaugurated by the Experiment Station in the Co-operative Experimental Work with farmers. By this means, experiments which are conducted at the parent Experiment Station here are repeated on nearly 150 farms scattered throughout the State. In this way, instead of a single answer every season, the Experiment Station is able to obtain numerous answers to the same question which must be asked of nature. Not only is the work of the Experiment Station forwarded, but the farmer learns by experiments of his own soil what is most needful and suitable.

If in time we come to the desired condition of having an Agricultural advisor in every County, connecting the college to the farmers, this and similar lines of work can be made of untold value to our people.

State Fair Exhibit:

The college made at the State Fair a full exhibit, illustrating both its work of instruction and its public service. But its best exhibit was its corps of cadets, who added no little to the success of the occasion, and who by their excellent conduct and splendid bearing, made many admirers and friends for the college. We regard the exhibit and encampment at the State Fair as a patriotic service which the college should render to aid so deserving an enterprise as the State Fair. While the cost to the college of making the exhibit is considerable, we feel that it was money well spent.

Manufacture of State Flags:

Two years ago, the General Assembly passed a law requiring the various schools and public buildings to float the State Flag, and required the Textile Department of this college to manufacture them. A suitable equipment has been installed to comply with the law, and a suitable design produced which has the approval of the Secretary of the State Historical Commission. The flags are being manufactured and sold at cost.

Mill Village Extension Work:

During the session assistance has been given by the Textile faculty to the Y. M. C. A. Monaghan Mill Night School in Greenville. It may be wise in time to greatly extend this form of extension work, because one-fifth of our white population live in the mill villages, and so far, there has been no extensive organized agency for giving assistance in technical or welfare lines. Here and there a mill corporation has on its own initiative taken steps to help its own operatives, but I believe that the college should in time reach out and give that sort of technical help in properly organized night schools that would be a real benefit, and turn the attention of ambitious mill boys to our Textile Course here.

PART III. THE SOUTH CAROLINA EXPERIMENT STATION.

The report of the college work would be incomplete without reference to the work done by the South Carolina Experiment Station. I do not believe that any department of the college deserves more praise for the progress made last year. Prof.

Harper and his able colleagues have been diligent, and have substantial results to show for their labors. The Experiment Station farm is in splendid condition.

At my request, Prof. Harper has prepared a brief report covering the work of the Experiment Station, and I commend this to you as one of the most interesting features of this report. As illustrative of what has been accomplished, I might mention a few of their results.

It has been found that potash is not needed for the staple crops in the Piedmont Section; that a 2-year rotation, cotton with a winter cover crop, followed by corn with peas, is almost as effective in building up land as a three or four-year rotation; that the best cover crops are rye and vetch; that for the Piedmont Section, the best grass for terrace banks is Texas Blue Grass; that acid phosphate gives better results than floats; that male asparagus plants produce 50 per cent. more marketable shoots than do female plants; that rot in sweet potatoes is due to various bacteria and fungus causes, which by proper care can be prevented; that cotton anthracnose can be eradicated by proper methods of seed selection and treatment, etc., etc.

A list of the experiments now under way is given in Prof. Harper's report, to which I invite your attention.

The Station officers answer thousands of letters from farmers asking for information, and assist the Extension Division in issuing popular bulletins, and aid at Farmers' Institutes.

Important co-operative work is being conducted with the National Department of Agriculture. This work includes the testing of forage crops and leguminous crops in the different sections of the State; a working out of the life history of some of the most injurious cotton and corn insects; developing varieties of cotton which will resist the cotton wilt disease; and in making a plant disease survey of the State.

The cost of the Experiment Station is borne entirely by the federal government, for which reason the expenditures are not included along with those of the other departments of the college. Last year the resources of the Station amounted to \$37,046.07, and the expenditures were \$32,844.50.

PART IV. THE OUTLOOK.

At the time of writing the report, Clemson College has entered upon its nineteenth session, with an enrollment of 827 students, which is 124 more than the enrollment for the preceding session.

If proof were needed of the growth of the college in the estimation of the people, it may be had in the fact that no sooner had the dormitory capacity been increased to accommodate 100 more students, than the additional capacity was immediately met.

This session sees the inauguration of a Work-Boy Course, which, organized primarily to furnish the farm with skilled labor, has the additional merit of giving to mature young men without cost, an opportunity to gain in two years what is equivalent to a one-year course in Agriculture. It was the original intention to take into this course only twenty men, but after receiving 225 inquiries in regard to it, it was decided to increase the number to thirty. The plan is to have the students work one week, and be students the next, and it has been our policy during their week of study to treat them just as every other student is treated, requiring drill and compliance with all military regulations, and the wearing of the uniform. In this way, we have avoided making a caste of these young men, with the consequent failure or difficulty which has attended Work-Boy Courses elsewhere. While the inauguration of the course has taken considerable patience, and the solving of some new problems, I am prepared to say that it is thus far satisfactory. Experience only can determine its eventual success. It is candidly an experiment, from which we hope for good results.

A One-Year Agricultural Course:

Since I realized that there were 225 young men in South Carolina interested in the Work-Boy Course, I have been persuaded that we must depart somewhat from the beaten track of the four-year degree courses if we are to meet a real demand of our people for practical agricultural education—an education that will take a young man who is already a farmer, and make of him a better farmer—an education that, above all, will of very necessity return him to the land, because it will not prepare him for anything else. The Work-Boy Course was sought, not only because it was a self-supporting proposition, but as much because it was a practical one-year course in Agriculture.

It is not the fault of the college that graduates from four-year courses do not return to the farm, *but it is a fact* that as a rule they do not. The college has no power to force them back—it is not in a sense to blame because they do not go back, but instead, and on account of their excellent equipment, go into high salaried government and college positions. Many of them become preachers and teachers of scientific Agriculture, and do more good for the cause than if each operated a farm of his own. But we must provide also for the young man who has not the time or means to take a four-year course, and without doing violence to existing courses or standards, go about to provide for these a practical education in farming that *will* return men to South Carolina farms. In other words, we must teach the simple art of farming. Every year we must dot South Carolina with a brood of young farmers, better equipped than when they come to Clemson College, and who are returning to build up better farms, to be leaders in their several communities, and thus by service to bind the college to the people.

Good farming is based upon a few simple principles. To teach these would be the purpose of the course. To do the work properly, it might be necessary to have special teachers for the purpose—teachers who are good farmers as well as scientists, and who know in just what proportion and to what extent a young farmer has need of the various sciences that underlie successful agriculture.

We should put into such a course, Agriculture, Horticulture, Animal Husbandry, Dairying, Farm Mechanics, Blacksmithing, simple Bookkeeping, Agricultural Arithmetic and Grammar, and then I would add a brief but sufficient course in Parliamentary Practice and Public Speaking, to the end that these young men might have at the outset an advantage that would make them leaders in their community life, and leaders in the political and agricultural organizations of their several Counties.

Financial:

It may be interesting to give a summary of the appropriations which were made at the July Board meeting:

PROSPECTIVE INCOME.

Morrill & Nelson Landscript Funds, (U. S.).....	\$ 30,754.00
Interest on Clemson Bequest.....	3,512.36
Estimated tuition	3,500.00
Estimated interest on deposits.....	2,500.00
Estimated miscellaneous receipts.....	10,733.64
Estimated tag tax (1910-11 figure).....	265,000.00
<hr/>	
Total	\$316,000.00
Balance brought forward, July 1, 1911, over out- standing appropriations	52,597.10
<hr/>	
	\$368,597.10

SUMMARIZED APPROPRIATIONS 1911-1912.

Fur public State work.....	\$ 99,006.00*
For additions to dormitories.....	31,014.50
For dairy building and dairy barn.....	14,903.75
For dwellings and permanent improvements to buildings	11,210.72
Live stock, class room, shop and laboratory equipment	25,361.40
For operating expenses of the college.....	154,914.90
<hr/>	
Total	\$336,501.86

*ANALYSIS OF THE PUBLIC STATE WORK.

Fertilizer inspection and analysis.....	\$40,360.00
Beneficiary scholarships	17,500.00
Extension Work and Farmers' Institutes....	15,500.00
Coast Experiment Station.....	2,700.00
Veterinary Inspection.....	4,756.00
Cattle Tick Eradication.....	9,415.00
Hog Cholera Prevention.....	1,500.00
Entomological and Nursery Inspection....	1,250.00
Co-operative Exp'tal work with farmers....	4,275.00
Textile Extension Work.....	150.00
Miscellaneous	1,600.00
<hr/>	
Total	\$99,006.00

It is worthy of note that when the tag tax was approximately \$227,000 ('09-'10), we expended for Public State Work about \$65,000. With a prospective increase to \$265,000 from this source, the appropriation for the same and added lines of Public Work amount to \$99,000. In other words, with a prospective increase of \$38,000 in the fertilizer tax, we have increased the appropriations for Public Service by \$34,000. This, it seems to me, should be taken as a conclusive evidence of our policy to spend any added income in a service which returns benefits directly to the farmer, in addition to the educational advantages afforded by the college.

Needs of the College:

The 1910 Legislative Committee made the following wise comment:

"Notwithstanding the opinion that Clemson College has more funds than it needs, and that there is a consequent tendency to extravagance, the Committee found that there is need of many additional houses for Professors, and that many of the houses built have been necessarily cheaper than is desirable for permanent service—also a dairy building, library, Y. M. C. A. building, adequate hospital, and better quarters for the unmarried officers and instructors, are actual needs, so that Clemson presents the aspect of being far from a completed institution."

As stated elsewhere in the report, the college property is now valued at approximately one and a quarter million dollars, but it is true that the college has yet important needs that must be met if its plant is to be properly rounded out. One of the greatest needs is an up-to-date gymnasium, in which systematic and scientific training will be given to each and every student. A better hospital is a necessity, because the present structure is too small and unsuitable. The present arrangement of the Library will serve for some years to come, but eventually a separate building of fire-proof construction should be provided. Additional live stock buildings will be necessary to complete the Animal Husbandry division. A splendid start has been made in the new dairy barn and the new dairy building. The rapid growth of the faculty and the lack of any other provision devolves upon the College the necessity of providing residences for its officers. This in itself means an expenditure of from six to eight thousand dollars a year to build even the kind of houses that the Legislative Committee was inclined justly to criticise.

But all of these material needs can be met in the course of the next ten years, even if the income of the college grows no larger than its present figure. If it should increase, it will give us the looked-for opportunity to greatly extend the Public Service of the college, which now uses up nearly \$100,000 from the fertilizer tax. Until the college is serving every need of her people, we will hope to see the tax increase, and the citizenship of the State may rest assured that your Board will return it to them in helpful service. A \$50,000 increase over the present figure would provide for an Agricultural expert in every County, would speedily complete the two branch Experiment Stations that we have planned, would enable us to furnish the rural schools with charts and materials to assist in teaching Elementary Agriculture to the children, would speedily eliminate that menace to the cattle industry, the Texas fever tick, would control or rid the State of hog cholera, and increase our veterinary force to meet the many calls for assistance. These and many other things could and would be done if we only had the money. Even if the tax should not greatly increase, we can at least maintain our present lines of service, and look forward to that time when with our buildings completed, we can project a still larger proportion of our funds into the channels of Public Service.

The college has just reached that point in its development when it can give the largest and best service, and needs most a sympathetic attitude on the part of our people that will enable them to see clearly its aims and justly estimate its accomplishments. In an atmosphere of appreciation and helpfulness, the college hopes to work out a destiny as alluring as was ever presented to an institution consecrated to the agricultural interests of a great State.

Respectfully submitted,

W. M. RIGGS,
President.

P. S.—I present herewith, as required by law, a list of students who pay tuition, those who do not, and those who enjoy scholarships.

I present also a report of the Inspection and Analysis of Fertilizers, the reports of the State Veterinarian, State Entomologist, the Secretary-Treasurer of the college, the South Carolina Experiment Station, and the report of the Board of Auditors, and commend all of these to your careful consideration.

Report on the Fertilizer Inspection.

Clemson College, S. C., Sept. 1, 1911.

Dr. W. M. Riggs, President, Clemson College, S. C.

Dear Sir: I respectfully submit the following report of the work of the Fertilizer Department for the fiscal year ending June 30th, 1911.

The trade and movement of fertilizers the past season was the largest in the history of the department, as will appear by the following statement in comparison with last year, which was larger than any preceding one:

	1909-10	1910-11
Number tons fertilizers (other than meal) sold	834,384	920,442
Number tons cotton seed meal sold.....	140,705	128,364
Number samples collected.....	1,700	2,087
Number samples analyzed.....	1,188	1,605
Number farmers' samples analyzed.....	98	119
Number different brands sold in the State.....	727	1,157

You will observe the total sales in the State as indicated by the sales of tags exceeded those of last year by 73,767 tons, but manufacturers and dealers were not required this year to return unused tags for redemption, but were allowed to keep and use in next season's business. This may in a measure account for the greater apparent sale.

INSPECTION.

For this purpose, fourteen inspectors and a chief inspector were employed, and the State was divided into fourteen divisions—none embracing more than four Counties, others only two or three—regard being had for the railroad facilities for covering any important points for distribution in each. These inspectors were kept constantly on duty canvassing their respective territories, enjoined to be vigilant in seeing that all fertilizers were branded as law requires, and exercising great care to insure accuracy of sampling every brand found on the market, and we think must embrace every different brand sold in the State. One of these inspectors resigned early in the

season to engage in other work, and one other was relieved before its close on account of inefficiency, but new division of territory was made, and theirs covered by other inspectors.

ANALYSIS.

The analyses of the official samples were published in thirty-five weekly bulletins during the months from January to July, and sent out rapidly as made while the fertilizers were being sold. If the goods of any manufacturer were found below guarantee, the agents of his competitors probably saw to it that the fact was not overlooked, thus stimulating greater care in mixing his brands.

One hundred and one (101) of these official samples were found on analysis to be three or more per cent. below guaranteed commercial value, and their manufacturers, except four, have paid the penalties in such cases prescribed, and the same has been deposited with the State Treasurer. Others fell below guarantee in one or more of their constituents, as will be found in the classified and detailed report of the Chief Chemist.

The expense of this department was \$30,384.30, as will appear in itemized statement of the Treasurer, to which I respectfully refer.

Respectfully submitted,

(Signed) H. M. STACKHOUSE,
Secretary.

Report on the Fertilizer Analysis.

Clemson College, S. C., Sept. 1, 1911.

Dr. W. M. Riggs, President, Clemson College, S. C.

Dear Sir: I respectfully submit the following report of the work on commercial fertilizers, waters, etc., done for the Board of Fertilizer Control and for the citizens of the State for the year ending June 30th, 1911. The growth of the work is shown by comparative figures for the preceding year.

	1909-10	1910-11
Official samples of fertilizers.. . . .	1,188	1,614*
Farmers' samples of fertilizers.. . . .	98	119
Waters.. . . .	60	74
Ores and Minerals.. . . .	18	52
Marls.. . . .	1	1
Soils.. . . .	7	11
Rocks, Ores, etc., for State Geologist.. . . .	9	0
Miscellaneous.. . . .	2	9
Totals.. . . .	1,383	1,880

*For good and sufficient reasons, the Secretary of the Board of Fertilizer Control did not publish nine of these analyses.

OFFICIAL SAMPLES OF FERTILIZERS.

Classification.

	1910	1911
Complete fertilizers.. . . .	599	941
Acid phosphates.. . . .	159	187
Acid phosphates with potash.. . . .	74	101
Cotton seed meals.. . . .	133	177
Kainits.. . . .	73	63
Kainits (hardsalts).. . . .	3	2
Nitrate of soda.. . . .	40	50
Muriate of potash.. . . .	26	24
Muriate of potash mixtures.. . . .	4	2
Nitrate of potash.. . . .	1	0
Sulphate of potash.. . . .	4	2
Dried blood.. . . .	15	9

Fish scrap..	24	13
Sulphate of ammonia..	0	1
Tankage..	10	10
Basic slag..	6	6
Miscellaneous..	17	17
	<hr/>	<hr/>
	1,188	1,605

DEFICIENT SAMPLES.

Of the 1,605 samples reported, 205 fell below the commercial value based on the guarantee. They were as follows:

In available phosphoric acid..	28
In available phosphoric acid and potash..	13
In available phosphoric acid and ammonia..	12
In ammonia and potash..	53
In ammonia..	59
In potash..	36
In available phosphoric acid, ammonia and potash....	4

205

The extent to which the 205 samples fell below guaranteed analysis in per cent. was as follows:

	0-0.10	0.10-0.25	0.25-0.50	0.50-1.00	1.00 & over
In available phosphoric acid	7	18	20	7	3
In ammonia..	4	30	39	51	3
In potash..	8	20	33	27	18
	<hr/>	<hr/>	<hr/>	<hr/>	<hr/>
	19	68	92	85	24

Of the 205 samples which fell below the commercial value based on guarantee, 102 fell three per cent. or more below that value. They are as follows:

In available phosphoric acid..	19
In available phosphoric acid and potash..	4
In available phosphoric acid and ammonia..	7
In ammonia and potash..	30
In ammonia..	22
In potash..	16
In available phosphoric acid, ammonia and potash	4

102

In addition to these 205 samples, there were 393 samples below guarantee in one or more constituents, the deficiency being made up, however, by an excess of other ingredients. They were as follows:

In available phosphoric acid..	62
In available phosphoric acid and potash..	13
In available phosphoric acid and ammonia..	3
In ammonia..	107
In ammonia and potash..	26
In potash..	182
In available phosphoric acid, ammonia and potash....	0

393

The extent to which these 393 samples fell below the guaranteed analysis in per cent. was as follows:

	0-0.10	0.10-0.25	0.25-0.50	0.50-1.00	1.00 & over
In available phosphoric acid	14	16	18	22	8
In ammonia..	43	58	32	3	0
In potash..	43	79	58	29	11
	<hr/> 100	<hr/> 153	<hr/> 108	<hr/> 54	<hr/> 19

AVERAGES OF ANALYSES.

	1910. Per Cent.		1911. Per Cent.	
	Found.	Guaranteed.	Found.	Guaranteed.
ACID PHOSPHATES:				
Available phosphoric acid	15.18	14.81	15.39	15.07
Insoluble phosphoric acid	0.59		0.49	
Total phosphoric acid	15.77		15.88	
ACID PHOSPHATES WITH POTASH:				
Available phosphoric acid	10.16	9.58	10.62	9.80
Insoluble phosphoric acid	0.68		0.54	
Total phosphoric acid	10.84		11.16	
Potash soluble in water	8.54	8.38	8.48	8.65
COMPLETE FERTILIZERS:				
Available phosphoric acid	8.89	8.04	9.00	8.19
Insoluble phosphoric acid	1.19		0.91	
Total phosphoric acid	10.08		9.91	
Ammonia	8.31	8.20	8.34	8.18
Potash soluble in water	8.34	8.02	8.33	8.23
COTTON SEED MEALS:				
Available phosphoric acid	2.87	1.50	2.46	1.52
Ammonia	7.20	6.97	7.26	7.02
Potash soluble in water	1.67	1.00	1.59	1.02
KAINITS:				
Potash soluble in water	18.10	12.00	18.00	12.00
MURIATE OF POTASH:				
Potash soluble in water	50.96	48.80	50.18	48.54
SULPHATE OF POTASH:				
Potash soluble in water	49.44	48.00	50.29	48.00
NITRATE OF SODA:				
Ammonia (equivalent)	18.10	18.04	18.46	18.01

The following table shows the yearly averages of fertilizer analyses from the time the Board of Trustees took charge of the fertilizer inspection down to the present time:

YEARLY AVERAGE OF ANALYSES FROM 1891 TO 1911, INCLUSIVE.

Season.	Acid Phosphates.			Acid Phosphates with Potash.			Complete Fertilizers.					Cottonseed Meals.				Kainita.		Muriate of Potash.		Nitrate of Soda.

1903-4	59	14.32	11.12	76	11.12	9.12	2.69	67	2.23	7.92	1.64	11	12.94	1.64	1.64	12.94
1904-5	81	14.81	10.82	82	10.82	9.19	2.90	62	2.41	7.42	1.54	20	12.84	1.54	1.54	12.84
1905-6	87	14.96	10.70	94	10.70	8.34	2.98	71	2.42	7.51	1.67	29	12.83	1.67	1.67	12.83
1906-7	111	14.96	10.76	92	10.76	8.91	3.23	99	2.63	7.32	1.69	80	12.78	1.69	1.69	12.78
1907-8	91	14.71	10.71	64	10.71	9.17	3.01	114	2.87	7.40	1.61	35	12.91	1.61	1.61	12.91
1908-9	108	15.02	10.55	90	10.55	9.26	3.08	115	2.89	7.27	1.71	45	13.03	1.71	1.71	13.03
1909-10	159	15.18	10.16	74	10.16	8.89	3.34	133	2.87	7.20	1.67	63	13.10	1.67	1.67	13.10
1910-11	187	15.39	10.62	101	10.62	9.00	3.38	177	2.46	7.26	1.59	73	13.00	1.59	1.59	13.00

In this table, as in the preceding ones, the ammonia yielded by the nitrogen in fertilizers is given instead of the nitrogen itself, as in the trade goods are still bought and sold on the ammonia basis. The per cent. of nitrogen is readily calculated, as fourteen-seventeenths of the ammonia is practically the weight of the nitrogen it contains.

Grades.

In the following table the number of acid phosphates, acid phosphates with potash, complete fertilizers and cotton seed meals of each grade according to guarantee, is placed side by side with the number found on analysis to belong to that grade, fertilizers having commercial values equal to those of schedule grades being placed in those grades:

	High.		Standard.		Low.	
	Claimed.	Found.	Claimed.	Found.	Claimed.	Found.
Complete fertilizers(941)	608	676	392	253	31	13
Acid phosphates with potash...(101)	66	81	33	13	2	7
Acid phosphates(187)	168	180	24	7	0	0
Cotton seed meals(177)	0	26	166	146	12	11
Total(1,406)	837	967	524	418	45	31

These results are due to the following changes in grade ascertained by analysis:

	Low to High.	Low to Standard.	Standard to High.	High to Standard.	High to Low.	Standard to Low.	No Change.
Complete fertilizers(941)	3	19	70	12	0	5	832
Acid phosphates with potash...(101)	1	0	16	0	1	4	80
Acid phosphates(187)	0	0	17	1	0	0	169
Cotton seed meals(177)	3	3	23	0	0	5	143
Total(1,406)	7	22	125	13	1	14	1,224

This shows that out of 1,406 samples, 1,224 were of the grade claimed for them, 154 were of higher grade, and 28 were of lower grade than that claimed for them.

In order to compare the results of the grades of last season with this, the following summary is given:

	1910.		1911.
Add phosphates	156	grade claimed	169
Acid phosphates	1	above grade claimed	17

Farmers' Samples of Fertilizers:

In addition to the official samples, there have been analyzed this season, 119 samples for individual purchasers, as provided for in Section 1540 of the Fertilizer Law.

Waters:

There have been analyzed this season 74 samples of water from different parts of the State. Of these analyses, 60 were sanitary examinations, the remaining 14 mineral water or complete analyses.

Ores and Minerals:

Of the 52 samples included under this head, 47 were assays of ores for gold and silver; 3 were iron ore analyses, and 2 analyses of manganese ores.

In addition to the above, 10 samples of rocks, mineral, etc., have been received for identification and examined.

Miscellaneous:

Of the 9 samples under this head, 2 were examinations in cases of suspected poisoning of human beings.

Distribution of the Work:

The fertilizers were analyzed by Messrs. B. F. Robertson, C. Van W. Cornell, C. W. Rice, and J. E. Toomer.

The analyses of waters, ores, marls, soils, etc., were made chiefly by Mr. B. Freeman. Dr. D. J. McAdam did a little of this work.

The assays for gold and silver have been made by Messrs. D. H. Henry and B. Freeman.

Mr. G. F. Lipscomb made the examinations in the poisoning cases. Mr. Lipscomb was also engaged throughout the year in examining the fertilizers for the presence of unusual ammoniates, especially leather preparations, and in determining the availability of the nitrogen in all suspected cases. During the season, 972 fertilizer samples were examined, these samples including 941 complete fertilizers and 31 samples of bloods and tankages. The nitrogen availability was determined in 123 samples, which were found to be suspicious in character. None of these were found to fall below the 80 per cent. availability requirement. Nine samples were between 80 and 85 per cent.; 41 between 85 and 90 per cent.; 54 between 90 and 95 per cent.; 19 were 95 per cent. and over. Assuming the methods as adopted and conducted by us to give a fair estimate of the availability of the total nitrogen, these results would seem to justify the conclusion that purchasers are getting a fair return for their money in the ammoniates bought. They would further seem to show that the manufacturers, while using rather large quantities of so-called cheaper ammoniates, are furnishing them in an available condition.

It gives me pleasure to be able to say that all of the assistants have done faithful and efficient work.

Very respectfully,

(Signed) R. N. BRACKETT,
Chief Chemist.

Summarized Report of the State Veterinarian.

Clemson College, S. C., Sept. 1, 1911.

Dr. W. M. Riggs, President, Clemson College, S. C.

Dear Sir: I respectfully submit the following summary of my report as State Veterinarian for the fiscal year ending July 1, 1911.

INVESTIGATION AND CONTROL OF CONTAGIOUS DISEASES.

Glanders:

This disease was reported and investigation made in the following Counties. The following table shows the number of animals examined and tested—also the number of glandered animals destroyed:

REPORT OF INSPECTIONS FOR GLANDERS.

County.	Mallein Tested.				Physical Examination.			
	Horses.		Mules.		Horses.		Mules.	
	Glandered.	Free.	Glandered.	Free.	Glandered.	Free.	Glandered.	Free.
Abbeville								1
Darlington					1		1	
Greenwood				1				
Georgetown						1		
Hampton						1		
Kershaw		2				2	1	
Lee	2	4		9	2	5	8	10
Newberry							1	
Orangeburg			1			2		
Spartanburg						1		
Sumter	2	2		2			1	1
Anderson		1						
Florence								1
Greenville						1		
Pickens								1
Destroyed	4		1		3		7	
Free		9		12		13		14

TUBERCULOSIS.

The following table shows the number of cattle tested and the number found tuberculous during the past year:

Where Tested.	Tuberculous.	Not Tuberculous.	Destroyed.	Quarantined.
Clover		9		
Rock Hill	2	164	2	
Bennettsville		4		
Ninety-Six		19		
Due West		1		
Kanes Neck		1		
Sumter		7		
Rock Hill	6	32	3	3
Yorkville		2		
Ninety-Six	8	61	6	2
Clemson College		71		
Totals	16	361	11	5

RABIES.

Requests for investigation of this disease were received from Pickens and Orangeburg Counties. In both instances the affected animals died before our arrival. The description of symptoms given by the owners caused us to suspect that the animals (cows and hogs) lost in Orangeburg County were affected with rabies, but the horse lost in Pickens County evidently died from indigestion.

TEXAS FEVER.

Reported in Richland, Darlington, Lexington and Saluda Counties. Owners were given all possible assistance and spread of the disease was prevented. This disease is common in this State, but owing largely to our tick eradication work, owners are so well posted as to the cause that investigation is seldom required.

CEREBRO-SPINAL MENINGITIS

Was reported in Oconee, Darlington and Greenwood Counties. Two of these outbreaks were investigated and owners given information as to necessary preventive measures. The other outbreak was reported by a graduate of this institution, who adopted necessary measures to prevent its spread. No further cases developed on any of these premises.

GASTRO-INTESTINAL PARASITISM.

In every section of the State, heavy losses of sheep and young cattle are occasioned by parasites of the stomach and intestines. Letters received from practically every County show that these parasites are a serious menace to our live stock industry. One investigation was made in Orangeburg County, where ten calves had already died, and many others were in a very weak condition. During the fall and winter, hardly a week passes that letters describing symptoms of parasitic infection are not received. Bulletins describing the cause, symptoms, and preventive treatment for this disease have been published by this division and given wide distribution.

HOG CHOLERA.

Owing to the fact that the South Carolina Experiment Station desired to administer the serum treatment for immunization of hogs throughout the State, the Station Veterinarian was temporarily appointed Acting Assistant Veterinarian from September, 1910, to April, 1911, and his expenses were paid by this division. Reported outbreaks of cholera in Spartanburg, Greenwood, York, Lee, Richland, Florence, Orangeburg, Horry and Greenville Counties were referred to him during this period. Infected premises were quarantined and ordered disinfected, and serum was used in some instances. A report of the results obtained from the use of this serum can be obtained from the report of the S. C. Experiment Station.

Prior to, and following the above-mentioned dates, this office investigated reported outbreaks of cholera in Chester, Darlington, Richland, Marlboro, Newberry, Pickens, Hampton, Orangeburg, Barnwell, Lee and Sumter Counties. Unfortunately, we were compelled, (prior to June 20, 1911), to depend upon sanitary measures alone to control these outbreaks, excepting in three herds where a very limited supply of serum (enough for fifteen or twenty hogs) was furnished by the Experiment Station. On the above-mentioned date, a supply of serum was secured, and in future we will attempt to keep a sufficient supply on hand.

Hog cholera serum is now being manufactured by this office, and we hope to keep sufficient serum on hand to assist in controlling all outbreaks of hog cholera in the State.

ERADICATION OF CATTLE TICKS

Tick eradication is being conducted by this office in co-operation with the U. S. Department of Agriculture. Four Counties (Oconee, Pickens, Greenville and Anderson) have been freed from ticks and released from Federal quarantine, and as a result of this work, the release of the following Counties is expected December 1, 1911: Spartanburg, Laurens, Union, Cherokee, Greenwood, that portion of Abbeville County north of the Seaboard Air Line Railway, that portion of Chester County west of the Southern and Northwestern Railway, and that portion of York County north of the Southern Railway. The release of this section will place over 7,000 square miles of South Carolina above the Federal quarantine line, and will open the world's best cattle markets to twelve Counties of this State.

Violations:

Violations of quarantine regulations have been prosecuted in Oconee, Pickens, Greenville, Spartanburg, Cherokee, Greenwood and York Counties. Thirty cases have been prosecuted. Of these we have had twenty-five convictions, two acquittals—two cases are now pending in circuit court, and the defendant in the other case has fled the State.

We regret the necessity for prosecutions, but successful tick eradication is impossible unless the spread of ticks is prevented by strict enforcement of quarantine regulations.

Present Force of Inspectors:

COLLEGE.	U. S. GOVERNMENT.
Dr. M. Ray Powers, State Veterinarian.	Dr. E. M. Nighbert, Inspector in Charge.
Dr. R. O. Feeley, Asst. State Veterinarian.	Dr. A. P. Edgerly, Assistant, Greenwood.
W. G. Reeder, Richburg.	Dr. Jno. Fahey, Assistant, Spartanburg.
W. F. Gaillard, Pickens.	S. H. Williams, Cowpens.
P. Wylie Spencer, Travelers Rest.	S. P. Clark, Inman.
M. M. Hall, Mt. Carmel.	R. L. Brawley, Gaffney.
L. B. Brandon, Abbeville.	H. C. Wilburn, Gaffney.
Chas. Bruce, McCormick.	Guy S. Scott, Rock Hill.
J. B. Smith, Greenwood.	B. O. Pennington, Hickory Grove.
M. P. McCalla, Greenwood.	J. H. Williams, Sharon.
R. R. Tolbert, Chester.	

INSPECTION OF IMPORTED LIVE STOCK.

Thirty-three States now require imported live stock to be inspected by a veterinarian, and to be accompanied by health certificates. Unfortunately, however, no uniform health certificate nor uniform method of authorizing veterinarians to inspect live stock for interstate shipments has been adopted. Consequently, various forms of health certificates are issued, and quite frequently these are issued by men not qualified to make such inspections.

With a view of remedying these conditions, this office submitted to those States east of the Mississippi and south of the Ohio rivers, a plan which will be adopted January, 1912, and these States will then require a uniform health certificate for all live stock entering this area. Such certificates are to be accepted only from veterinarians of the U. S. Department of Agriculture, or those veterinarians unqualifiedly approved by the live stock sanitary officers of the States in which they reside, such authorization to be revoked if inspections are not satisfactorily made. The adoption of this plan will do much to stop the fraudulent practices now in vogue among some shippers and veterinarians.

Several violations of the State law governing importation of live stock have been investigated in various portions of the State, but sufficient evidence to justify prosecution could not be secured in all cases. One case in Hampton County was thrown out on a technicality at the preliminary hearing. Another case in Edgefield County has been sent to the circuit court, while the third case, in Greenville County, has not yet been given a preliminary hearing.

The following animals were brought into South Carolina during the year ending July 1, 1911:

Horses	8,505
Mules	19,306
Cattle for feeding	6,786
Cattle for dairy purposes (tested and found free from tuberculosis)	119
Hogs for breeding	2,469
Sheep and goats	94

**PRESCRIBING FOR ANIMALS AFFECTED WITH NON-CONTAGIOUS
DISEASES.**

Hundreds of letters requesting information concerning non-contagious diseases are received each year. If those making requests of this character can secure the services of qualified veterinarians, they are referred to these practitioners. Letters of this character from communities where there are no veterinarians are given careful attention, and although the symptoms described are usually very indefinite, still it is often possible to help those making these requests, and this work is, therefore, considered one of our most important duties.

Respectfully submitted,

(Signed) M. RAY POWERS,
State Veterinarian.

Report of the State Entomologist.

Clemson College, S. C., Sept. 1, 1911.

Dr. W. M. Riggs, President, Clemson College, S. C.

Dear Sir: I respectfully submit the following report for the fiscal year ending June 30th, 1911:

This season has been interesting and eventful. Phenomena that were expected failed to happen, while those that happened had not been expected at the beginning of the season.

As heretofore, this report is submitted under the following sub-heads:

1. Nursery Inspection.
2. Certification of nurseries outside of South Carolina.
3. Nursery quarantine work.
4. Boll weevil quarantine work.
5. General insect control.
6. The problem before us.

NURSERY INSPECTION.

The nursery inspection work during the past season was carried on with considerable care, and a greater number of details were observed than in previous years. These details were necessary as a preliminary step for recommendations intended to bring our nursery service in this State to a standard equal to that of any State in the Union.

At this writing, not all of the Inspectors' reports have been received, and the following statement on the condition of nurseries in South Carolina at the close of the present season is not quite complete. A supplementary statement can be made in a very short time which will fully represent present conditions.

The Nurseries of South Carolina:

Oakway Nurseries, (W. T. Bearden, Prop.), Westminster, S. C.; Route 2. Inspected October 20, 1911; apples, 4,000; grapes, 100; certificate issued October 20, 1911, No. 6; tags, 100.

Madden Nursery, (D. A. Madden, Prop.), Ware Shoals, S. C.

Inspected October 4th, 1911; apples, 2,000; pears, 75; certificate issued October 14, 1911, No. 5, duplicates 3.

C. A. Moss, Spartanburg, S. C., Greenhouses. Inspected September 30, 1911; carnations, 25,000; roses, 2,000; ferns and cyclameas; certificate issued September 30, 1911, No. 7; tags 300.

C. M. Newman, Charleston, S. C., Greenhouses. Inspected October 27, 1911; grapes, 25; ornamental hedges, mainly armora privet, 3,000; roses 20,000; certificate issued October 27, 1911; No. 14; tags 100.

Greenville Nursery Co., Greenville, S. C. Inspected July 13, 1911; apples, 40,000; peach, 6,000; pear, 2,000; grape, 7,000; cherry, 1,000; ornamental plants, 750; shade trees, 5,500; roses, 1,811; hedges, 5,000; catalpas, 100; certificate issued July 13th; No. 1; tags 100.

Greenville Floral Co., Greenville, S. C., Greenhouse; dealers and growers of ornamental plants and cut flowers. Inspected Sept. 14, 1911; certificate issued Sept. 14, 1911, No. 17; tags 300.

Jude Robinson, Rowesville, S. C. Inspected October 30, 1911; pecan, 25,000; certificate issued October 30, 1911, No. 11; tags 100.

M. C. Dantzler, Orangeburg, S. C. Inspected October 29, 1911; pecan, 12,000; certificate issued October 29, 1911, No. 18; tags 100.

Hall Nursery Co., Iva, S. C. Inspected November 11, 1911; pecan, 10,000; certificate issued November 11, 1911, No. 3; tags 100.

W. D. Woods, Darlington, S. C. Inspected November 8th, 1911; shade trees, estimated, 4,000; certificate issued November 8, 1911, No. 19.

All South Carolina certificates expire June 1 following date of inspection.

Stock handled by the nurseries is recorded as stock grown, and a detailed list of home grown and imported stock is kept on file in this office. It is apparent under the rules and regulations of the State Board, that nurseries handling imported stock must have the stock shipped direct to destination, and a South Carolina certificate is required to remove it from one premises to another within the State.

In order to bring the nursery stock service of our State to a high standard, it will be recommended that after this shipping season, every nursery in this State must provide itself with a

fumigating equipment that is approved by the State Entomologist, and that all stock shipped from said nurseries in the future must be previously fumigated according to prescribed standard regulations. Important revisions of the law will be recommended.

CERTIFICATION OF NURSERIES OUTSIDE OF THE STATE OF SOUTH CAROLINA.

This office rigidly enforced the rules and regulations of the State Board of Entomology requiring the out-of-State nurseries doing business in this State to file with the State Entomologist a copy of their Certificate of Inspection, and a certificate that said nurseries are properly equipped for fumigation. By "properly equipped" is meant that the equipment has been approved by the State Entomologist of the State in which the nursery is located. Before inter-state permits are issued, the nurseries are required to sign a pledge that they will fumigate with the standard formula all nursery stock (except conifers) before the stock leaves the nursery.

The following is a list of the nurseries to whom inter-state permits were issued. The list is not complete at this writing. This list is not entirely satisfactory to the Entomologist, but we have done the best we could under the circumstances, and are prepared to handle it in every detail another season:

J. V. Munson	Denison	Sept. 5, '11 ...	227...	8.....	100...	July 1, 1912	

VIRGINIA.

		Date	Cert.	Inter-S.	Tags		
Name of Nursery.	Location.	Inspected.	No.	Per No.	No. Ordered.	Cert.	Exp.
Virginia Nurseries	Richmond	Aug. 25, '11	306	73	100	Sept. 1,	1912
Old Dominion Nurseries	Richmond	Aug. 25, '11	304	74	100	Sept. 1,	1912

*By special arrangement.

The inspection of large nurseries requires several days—in the above schedule, only the last date is recorded.

Summarizing the foregoing record, we have the following:

State.	Number Nurseries.	Number Ordering Tags.	Number Tags Ordered.	Per Cent. Ordering.
Alabama	5	5	500	100%
Florida	5	5	700	100%
Georgia	8	8	2,200	100%
Illinois	1	1	100	100%
Indiana	2			
Kansas	2	2	300	100%
Maryland	2	2	300	100%
Missouri	2	2	900	100%
New York	16	7	700	44%
New Jersey	3	2	1,100	66%
North Carolina	9	9	2,900	100%
Ohio	4	31	300	75%
Pennsylvania	5	4	400	80%
Tennessee	9	7	1,700	98%
Texas	1	1	100	100%
Virginia	2	2	300	100%

The largest number of nurseries from any given State is New York, with 16 nurseries, nearly twice as many as the total number from any other two States. The number ordering tags is a little less than 44 per cent., with the total number of tags

amounting to 700. With the exception of one Southern State, 100 per cent. of all the nurseries of the Southern States that filed credentials ordered tags, showing an active business among those nurseries, Tennessee being the only exception with 78 per cent., which, however, is counterbalanced by the third largest number of tags going to the seven nurseries on file from that State. Counting Southern Missouri as South, out of the 12,100 interstate tags so far ordered, 9,200 are for Southern grown stock against 2,900 for Northern grown stock, New Jersey alone having ordered 1,100.

Considering the fact that much of the stock from the Northern States consists of bulbs, strawberry and flowering plants, it appears from the above figures that but a small per cent. of our nursery stock is Northern grown stock, and that nurseries and individuals in this State acting as agents, are handling Southern grown stock. We hope to be able to require another year that all stock not grown by the nursery from whom ordered must bear a certificate stating the locality where the stock was grown.

Whenever trees, shrubs, cuttings, vines, bulbs or roots are shipped into this State without having attached to every bundle or package the certificate of the Government Entomologist of the State in which the stock was grown, or if the interstate tag of the South Carolina State Board of Entomology is absent, the shipment is in violation of the State laws, and no person is permitted to deliver or receive same until it has been inspected by the State Entomologist and declared free from injurious insect pests and plant diseases.

This office utilizes every opportunity for familiarizing itself with the various nurseries shipping into this State, and this information is of great value in handling violations.

The following is a current record of violations of interstate shipments. Where stock was released, it was done on satisfactory evidence that it was clean—this evidence was secured by actual inspection or otherwise.

Name and Address.	Consigned To	Nature of Violation.	Disposition.
Groenwegen & Son, Rotterdam, Holland	J. H. Cremer & Son, Spartanburg, S. C.	Strawberry plants	Released
Evergreen Nursery Co., Sturgeon Bay, Wis.	Greenville Nursery Co., Greenville, S. C.	Evergreens	Released
Geo. Wittbold & Co., Chicago, Ill.	F. M. Kirby Co., Greenville, S. C.	Palms and ferns	Released
L. Darrow, New York	Barclay St., E. Bovey, Greenville, S. C.	Lily bulbs	Released
Robt. Buist & Co., Philadelphia, Pa.	Philadel-Mauldin Pharmacy, Greenville, S. C.	Bulbs	Released

T. W. Wood & Sons, Richmond, Va.	Sloan Bros., Greenville, S. C. Bulbs	Released
Franklin Davis Co., Mulliken, Md.	Emil Bovey, Greenville, S. C. 1 box trees.....	Released
Robt. Buist & Co., Philadelphia, Pa.	Mauldin's Pharmacy, Greenville, S. C.	1 box and 1 bale bulbs...Released
Marshall E. Reeves, Gat, N. J.	Greenville Nursery Co., Greenville, S. C.	10 bales moss.....Released

It should be stated that every reasonable consideration was used this season in dealing with violations, owing to the more rigid enforcement of the law. First violations were released upon inspection, if it was considered safe, except cotton seed and seed cotton, which was not allowed to proceed to destination.

THE BOLL WEEVIL QUARANTINE WORK.

The boll weevil act has been more rigidly enforced than heretofore. When the writer took charge on March 8th, it appeared to him that some modifications of the restrictions would be necessary owing to the continually changing conditions in the cotton belt since the law was passed in 1907. The weevil has been spreading continually every season and under favorable conditions, it will require about five years to reach this State. The mills of the State have co-operated in every way possible to have the provisions of the law made effective. In their orders for western lint, they have it provided in their contracts that the material originate outside of weevil-infested territory. The mills of the Carolinas have depended on the lower Mississippi valley for their long staple. These mills equipped themselves at considerable expense with special machinery for handling long staple. The territory from which this supply was obtained is rapidly being covered by the weevil. While South Carolina has greatly improved its fibre, there is not enough grown to supply the mills, making it apparent that if our law would be rigidly enforced, it would severely injure one of the greatest industries of our State. In some cases, no doubt, the principles of self-preservation has compelled mills to evade the quarantine law.

Upon taking charge, the first question to determine was whether the quarantine could be enforced. As a preliminary test, the writer issued the quarantine notice to take effect September 10th. This led to the joint meeting of the South Carolina State Board of Entomology and the representatives

of the Cotton Manufacturers' Association at Greenville, S. C., on September 9th, when revised rules and regulations were adopted. Under these rules and regulations, it is a comparatively easy matter to evade the quarantine regulations if any shippers care to do so. Before making any recommendations, the writer has arranged for a meeting of the cotton belt Entomologists at Atlanta, December 5th and 6th, 1911, for the purpose of discussing plans for uniformity of requirements among the different States affected. The result of the meeting will be appended to this report.

In order to facilitate the work of carrying out the rules and regulations of the Board, this office sent out current quarantine notices, giving the infested and uninfested Counties in order to guide shippers ordering lint from the Southwest. Notices were issued on September 20th, September 30th, and November 6th.

The following is a current record of violations that came to the attention of this office:

Consignor.	Consignee.	Material.	Disposition.	
J. R. Cleveland, Decatur, Miss.	G. W. Hendrix, Waterloo, S. C.	Cotton Seed...	Confiscated	8/20, 1911.
J. R. Cleveland, Decatur, Miss.	J. A. Fairly, St. Matthews, S. C.	Cotton Seed...		
J. R. Cleveland, Decatur, Miss.	W. A. G. Jamison, Liberty, S. C.	Cotton Seed...	Seed planted.	
Greenwood, Miss.	W. S. Gray Cotton Mills, Greenville, S. C.	Baled Cotton	Released	8/12/11.
Memphis, Tenn.	W. S. Gray, Cotton Mills, Greenville, S. C.	Baled Cotton	Released	8/12/11.
Greenville, Miss.	W. S. Gray Cotton Mills, Greenville, S. C.	Baled Cotton	Released	8/12/11.
Falls, Miss.	W. S. Gray Cotton Mills, Greenville, S. C.	Baled Cotton	Released	8/16/11.
New Orleans, La.	Parolet Manufacturing Co., Pacolet, S. C.	Baled Cotton	Released	8/30/11.
Vicksburg, Miss.	C. P. Matthews Co., Spartanburg, S. C.	Baled Cotton		

An additional shipment of cotton seed was confiscated and destroyed at Southern freight depot, Greenville, March 28, 1911. This shipment was from weevil territory in Oklahoma.

When the responsibility of the consignor is known, also the consignee, together with the contract under which the consignment is imported, release may be authorized on acceptable affidavit that the shipment originated outside of boll weevil territory. This precaution is taken because an expense bill may show cotton to have originated in boll-weevil territory when it really has not. This precaution applies only to compressed bales and to no other cotton products.

The following revised Rules and Regulations governing the shipments of cotton and cotton by-products, as well as nursery

stock, were adopted by the Board at their respective meetings on March 12th and September 9th, 1911:

Rules and Regulations of the South Carolina State Board of Entomology for the Government of the Entomologist in Carrying Out the Provisions of "The Act Governing the Sale and Transportation of Nursery Stock." Adopted March 12, 1911:

"In accordance with an Act of the Legislature of South Carolina, approved the 23rd of February, A. D. 1903, we, the State Board of Entomology, appointed according to the provision of said Act, by the Board of Trustees of Clemson College, have adopted the following Rules and Regulations, to govern the inspection, certification, sale, transportation and introduction of trees, plants, shrubs, cuttings, bulbs, buds, vines, or roots which we deem necessary and advisable to prevent the introduction or dissemination of injurious insects and plant diseases in the State:

"Sec. 1. The Entomologist of Clemson College, who shall be known as State Entomologist, shall direct the work required under this Act. He shall inspect before the first day of November of each year, every nursery and every place in the State of S. C., where trees, plants, shrubs, cuttings, buds, vines, bulbs or roots, are sold or offered for sale. Whenever the inspection shows the stock sound and free from injurious insects and diseases, a certificate of inspection is issued. When the premises are found to be infested, the certificate shall be withheld until they are cleaned. Infested orchards shall be treated whenever discovered, the actual cost of treatment of orchards and nurseries, not including Entomologists' traveling expenses, to be borne by the owner of the premises. All certificates are invalid after the first day of June each year, and must be renewed before the first day of November of that year.

"Sec. 2. All nurserymen and dealers in trees, plants, shrubs, cuttings, buds, vines, bulbs, or roots, residing within this State, must not sell or transport, or give away any stock unless the certificate of the South Carolina State Board of Entomology declaring the same to be sound and apparently free from injurious insects and plant diseases, has been issued. Such certificate must be attached to every bundle or package of every consignment.

"Sec. 3. Stock designed for points outside of the State must be accompanied by the South Carolina certificate, as provided in Section 2. It must also be accompanied by an interstate tag issued by the inspection office of the State to which consigned. The tag is procured by sending, or requesting this office to send to the inspection office of the State to which shipment is to be made, a copy of the South Carolina certificate. Tags can be furnished at cost of printing.

"Sec. 4. Stock coming from other States, Countries and Provinces, and consigned to points within this State, must be accompanied by the official certificate or inspection tag issued in the State, Country or Province where shipment originated, also an interstate permit from the South Carolina Board of Entomology. This interstate permit can be issued only after the certificate of inspection of the State or country where shipment originated has been filed with the South Carolina State Board of Entomology, and it is further required that the fumigation certificate of the South Carolina State Board is properly filled out and filed in the office of the Entomologist of the South Carolina State Board.

"Sec. 5. Inspection tags are merely fac-simile copies of original inspection certificates, which are issued by the various inspection offices at cost of printing. All shipments coming from other States, and all those destined for other States, may be held subject to inspection at destination."

Regulations, Revised and Adopted September 9, 1911, Governing the State Entomologist in Carrying Out the Provisions of the Boll-Weevil Act:

Regulation No. 1. None of the articles quarantined against by this Act shall be delivered or received if coming from any boll weevil infected territory whatever.

Regulation No. 2. No transportation company shall deliver in South Carolina any of the articles enumerated in the Act which come from a County in which the boll weevil is known to exist. The non-existence of the boll weevil in any County shall be determined by the latest official report of the boll weevil status issued by the Bureau of Entomology, U. S. Department of Agriculture.

Regulation No. 3. The local agents of the transportation companies in this State shall notify at once the State Entomologist

at Clemson College of the arrival of articles in violation of Regulation No. 2, and shall hold the same for his inspection. Upon receipt of such notice, the Entomologist shall proceed at once to investigate the shipment. If he finds upon investigation that such shipment is in violation of Regulation No. 2, he shall order the railroad in writing, and the consignor or consignee by wire, to remove said shipment from the State at once.

Regulation No. 4. The local agents of the transportation companies in this State shall notify the State Entomologist at Clemson College of any shipments packed in any of the articles specified in the Act, and hold the same for his inspection. If those shipments are in violation of Regulation No. 2, the supplies shall be unpacked in the presence of the Entomologist, and the material used in packing shall be destroyed by him.

Regulation No. 5. Any communication concerning this matter shall be addressed to the State Board of Entomology of South Carolina, care of the State Entomologist, Clemson College, S. C.

INSECT CONTROL.

In the general insect control work of this office the panorama of the season opened with the green bug or Southern grain louse. This notorious grain pest openly threatened us with an invasion, but occurring late in the season, together with the large number of parasites present, we had every reason to depend on warm weather to break it up. The weather deserted us, and the oat crop of the central part of the State was severely injured.

The green bug invasion was immediately followed by severe sporadic outbreaks of the cow pea curculio, *Chalcodermus aeneus* on cotton. This was followed by outbreaks of cut worms. The next performance consisted of a general battle between the cotton leaf louse and the common lady bug, *Hippodamia convergens*. Warm showers formed a favorable ally of the lady bug and caused this insect to come out victorious. This battle was observed by most farmers of the State and it was one of the most inspiring performances of the season.

While the heavy correspondence was being carried on, this office was observing the approach of the cotton caterpillar from the Southwest. It was not expected to reach us before the middle of October, after which little injury would be done. This pest

entered the State in early October, and closed the season with one of the most interesting and best advertised performances of the year.

The status of all the outbreaks is carefully observed by this office, and suggestions will be issued from time to time as the situation changes, in order to avoid, as far as possible, losses from the same source next season.

A large amount of data is on file regarding other insect outbreaks, and these records will be reported in bulletins the coming season.

THE PROBLEM BEFORE US.

In previous years it was totally impossible for this office to keep in touch with insect phenomena throughout the State. With the increased facilities, however, this part of the work will be handled efficiently next season.

There is at present no fumigation requirement for our nurseries in South Carolina. Those who are not properly equipped and who are doing an active business, are willing to meet such requirements, so as to enable them to ship to other States. It will, therefore, be recommended at the next meeting of the Board of Entomology that the Rules and Regulations shall include the following statement :

"All nurseries in South Carolina shall provide themselves with a fumigating equipment approved by the State Entomologist. All nursery stock (except conifers) shall be properly fumigated with Hydrocyanic acid gas, using the standard formula. After June 1st, 1911, no certificates shall be issued to any nursery in South Carolina, unless such nurseries are properly equipped for fumigating and the owner or manager of the nursery pledges himself to fumigate all stock in accordance with the directions of the State Entomologist.

"A bulletin fully describing fumigating houses and boxes, together with standard formulas and directions for fumigation, is now in preparation and will be issued soon. Further minor recommendations will be submitted to you previous to Jan. 1, 1912."

Our boll weevil quarantine work is in a very unsettled condition, however, and recommendations for legislation will be submitted in a short time. While it appears that boll weevils could

easily be carried in interstate shipments of compressed cotton, yet the fact is that dissemination by this method has never been proven. As soon as the present plans are matured, the writer will attempt a recommendation for the disposition of this problem, and which is intended to secure the closest co-operation between the cotton manufacturers, planters, transportation companies, and the quarantine service, and yet will provide a very reasonable safeguard against accidental or artificial introduction.

There was appropriated for this work during the past fiscal year for operating expenses, \$500.00. This was used as follows:

Entomological Inspection..	\$250.00
Orchard Inspection and Assistance..	200.00
Supplies..	50.00
	————— \$500.00

Respectfully submitted,

(Signed) A. F. CONRADI,
State Entomologist.

Summarized Report of the South Carolina Experiment Station.

Clemson College, S. C., Sept. 1, 1911.

Dr. W. M. Riggs, President, Clemson College, S. C.

Dear Sir: I have the honor of submitting herewith a brief report of the work of the South Carolina Experiment Station for the fiscal year ending June 30, 1911. A full and detailed report will appear as a separate publication.

Most of the experiments now under way are continuations of those planned a few years ago.

The Station officers continue to have thousands of letters from farmers of the State, asking detailed advice on nearly every subject connected with agriculture. This giving to the farmers at first hand the results of experiments conducted at our Station and elsewhere is one of the important features of our experimental work. That the information we give in these letters is appreciated, is attested by hundreds of letters received from farmers recognizing their importance.

During the year nearly every member, of the Station staff, has given assistance to the Superintendent of the Extension Division in making addresses at various agricultural meetings held in different parts of the State.

The Station made an exhibit at the State Fair which was viewed by thousands of people who took great interest in the exhibit, which was of educational value.

The Station continues to co-operate with the Department of Agriculture in a number of experiments, such as the testing of forage plants and leguminous crops in different sections of the State, and in working out the life history of some of the most injurious cotton and corn insects; in making a plant disease survey of the State; in developing immune varieties of cotton to resist the cotton wilt disease.

The mailing list of the Station is constantly growing. We have now about 18,000 names of farmers on our mailing list who receive all of the publications issued by the Station.

Some of the most important problems now being investigated are as follows:

Experiments to determine the fertilizer requirements of upland soils of South Carolina for the various staple crops when grown in a number of different rotations. We have accumulated valuable data, covering a period of about six years. We have found that potash, except in small quantities, is not needed for the staple crops in the Piedmont Section. Corn requires more potash than does cotton. In our rotation experiments, we have found that a two-year rotation—that is, cotton with a winter cover crop, followed by corn with peas—is as effective in building up the soil as a three or four-year rotation.

We have continued our experiments in developing new types of cotton. This breeding work has been along two lines.

- (1) To develop a high yielding, big boll variety,
- (2) To develop a long staple, high yielding variety.

Our long staple variety, that we have developed at this college, outyields all of the other long staple varieties grown in the State. It will now be our object to establish this variety and get as much of the seed grown as possible to be distributed to the farmers. To make comparisons, we have about fifty of the standard varieties of cotton under test. Our breeding work also includes selection for increasing yield, length and quality of fiber, and the size of the boll and general vigor of the plant. We have a number of varieties of cotton growing in practically every County of the State, and we find that the different types of soil require different varieties of cotton, as some varieties of cotton are better adapted to one type of soil than to others.

We have continued our breeding work with corn and have been successful in increasing the uniformity of the ear and increasing the yield of grain. We have developed a splendid variety for ensilage. We have three other varieties that give splendid yields, and will be in position to distribute several hundred bushels of corn throughout the State next spring.

Our experiments with fertilizers containing various sources of ammonia are being continued. A report on these will be made next spring.

During the past year we have accumulated data that showed that oats and wheat should be well fertilized in the fall, and should receive no other fertilizer in the spring, except a top dressing of nitrate of soda. Where we applied the same amount of fertilizer in the spring as in the fall, we got only half the

increase from check as we did from plots receiving full application of fertilizer in the fall.

We have completed five years' tests with various cover crops, and find that vetch and rye are the best. Vetch and rye should be turned under early in the spring when the ground is in good condition for plowing.

In our experiments to determine the best grass to be used in holding terraced banks, we find that the Texas blue grass is the best grass for this purpose on terraces with northern exposure, and Bermuda the best when the exposure is southern.

We have just completed a four-years' test of acid phosphate in comparison with floats, and these tests show that acid phosphate gives far better results than floats.

For four years the Station has conducted experiments to determine the effect of pollen from barren stalks on the yield of corn. While we do not find that the corn decreases in yield from year to year, we do find that the pollen from the barren stalks affects the position of the ear on the stalk.

The Station is conducting elaborate experiments with grape culture, especially with the *Rotundifolia* type. These experiments cover methods of pruning, training the vines, and breeding new varieties, also the testing of about 125 varieties of bunch grapes.

The experiments with asparagus have been most interesting. The male plants of asparagus produce 50 per cent. more stalks than do the female plants. The male plants also appear to be more resistant to rust.

The new variety of okra developed by Prof. Newman has been scattered broadcast throughout the State, and it is considered the best variety ever planted.

The Station continues work in trying to devise means of combatting pear blight. No definite remedy has been discovered, but the work thus far is promising.

The horticultural experiments cover a broad field, as experiments with apples, peaches and with a great variety of vegetables.

The work along the line of plant diseases has been of a high order. Prof. Barre has continued his anthracnose investigations, and he has found that this dreaded disease can be easily eradicated in one season by a careful method of selection. Prof. Barre has devoted most of the year to the investigation of this

disease, and in devising methods of keeping sweet potatoes. He finds that the rot of sweet potatoes is due largely to various bacteria and fungus diseases that with little care can be avoided.

The Station work along entomological lines has been confined largely to the cotton and corn root louse and corn wire-worm. These insects cause considerable damage in the State. Prof. Conradi has an assistant in Marion County devoting all of his time to the study of the life history and methods of control of these insects. During the year, Prof. Conradi has conducted experiments in Colleton County, in working out the life history of the cotton wire-worm, and he has run experiments in rotation, using repellents and cultural methods. There have been a number of miscellaneous insect outbreaks throughout the State, such as red spider and pine bark beetle, and these insects are receiving the attention of the Entomologist. He has co-operated with a great number of farmers in spraying their orchards, groves and shade trees, and a great deal of useful information has been given out by this method. His experiments in the State have saved thousands of dollars to the fruit growers during the last year.

The Chemist of the Station has obtained valuable data with the different forms of nitrogenous manures. He is also getting along splendidly with his work in determining the cause of cotton seed meal poisoning. The Chemical Division has about completed the work that the Station has been prosecuting with the sweet potato. A full report of the sweet potato investigations will be issued soon as a bulletin. Prof. Keitt's investigation of the phosphoric acid content of soil has been the most complete work on this subject that has been done in the South. Prof. Keitt has made a great number of miscellaneous analyses of soils, etc., during the past year.

The Animal Husbandry Division of the Station has continued its study of the physiological effect of feeding large amounts of cotton seed to dairy cattle. These experiments show conclusively that when dairy cattle are fed from 6 to 8 lbs. daily of cotton seed meal, through long periods, that udder trouble and other physiological disturbances take place which are more or less injurious to the cow. The Station has built up a splendid herd of Berkshire hogs and we now have a first class Jersey herd—although small.

The following are some of the most important projects under the Adams Act being prosecuted by the Station:

Investigation of the parasites of the intestinal tracts of ruminants.

Experiments to determine the relation of temperature to insect activity.

The cause and dissemination of contagious abortion in cattle.

Physiological and pathological effects of feeding large amounts of cotton seed meal to cows.

Experiments to determine the cause of cotton seed meal poisoning in hogs.

A study to determine the relation that exists between soil types and the length of the fiber of cotton.

Experiments to determine the effect of foreign pollen on the productiveness of the varieties of *Rotundifolia* grapes.

A study of the life history of the fungus which causes anthracnose in cotton.

Experiments to determine the relation that exists between the moisture evaporated by plants and the amount of nitrates in the soil.

Experiments to determine the various factors affecting the composition of cotton seed with special reference to the content, and the location of the form of phosphoric acid in the seed on upland varieties of cotton.

Experiments to determine the influence of environment on heredity.

Experiments to determine the influence of excessively rich carbohydrate ration on the fecundity of sows.

Experiments to determine the cause of the shedding of cotton.

Experiments to determine the cause of the partial insolubility in water of potash salts when mixed with basic slag.

The work of the Coast Station near Summerville during the past year has progressed most satisfactorily. We have completed the drainage of more than 100 acres and during the past year we had growing on this formerly wet, swampy land, magnificent crops. The yield of cotton was more than one bale per acre; the oat yield, more than fifty bushels; and the corn yield averaged fifty bushels. The drainage system is working perfectly, and the health of the employees has been good. Large yields of hay and forage crops have been obtained. We are now

conducting experiments with various grasses, forage crops, fruits, vegetables, and a great number of fertilizer tests.

The Station officers are conducting several hundred experiments with farmers in the State in determining the fertilizer requirements of cotton on different types of soil, fertilizer experiments with corn, tobacco, oats, rotation experiments and variety tests of cotton, corn, sorghum, clover, cow-peas, wheat, sweet potatoes, millet, Irish potatoes, Kaffir corn, and various grasses.

Very truly yours,

(Signed) J. N. HARPER,

Director.

AUDITOR'S REPORT.

Clemson College, S. C., November 24th, 1911.

Hon Alan Johnstone et al., Board Trustees the Clemson Agricultural College of South Carolina.

Gentlemen: As directed by the Chairman of your Finance Committee, Hon. R. W. Simpson, I have, with the assistance of Mr. J. B. Haltiwanger, made a thorough examination and audit of the books and accounts of the Treasurer's office of the Clemson Agricultural College for the year commencing July 1st, 1910, and ending June 30th, 1911, and beg respectfully to submit in detail a report of our conclusion.

It is essential in order to make a perfect audit of the books and accounts of the Treasurer's office that we divide the accounts into six classes, to wit:

Schedule 1. Clemson Agricultural College account.

Schedule 2. Cadet Fund account.

Schedule 3. Experimental Station account.

Schedule 4. Cadet Deposit account.

Schedule 5. Reinvestment Fund account.

Schedule 6. Petty Ledger account.

The transactions of the office naturally resolve themselves according to the foregoing schedules.

We have brought forward, and charged to the Treasurer, all cash balances on hand June 30th, 1910. We have checked and readed each and every receipt, the compilation of which establishes the liability of the Treasurer. We have checked and readed each and every voucher, the sum total of which constitute the credits to which he is entitled. We have checked the debits and credits to the books, readed the books and find them correct, and brought forward all balances as exhibited in Schedule 6—which shows in detail the cash on hand and in bank, and file herewith copies of the bank certificates of deposit. We have verified the bank certificates of deposit as to cash on hand June 30th, 1911, with the ledger balances and find them correct. We have examined the Annual Report of the College for the year ending June 30th, 1911, and find it in substance correct. The system of bookkeeping lately installed is, in our

opinion, perfect and affords every safeguard necessary, both for the protection of the institution and the Treasurer. The voluminous amount of office work required to keep up with the detail transactions of the institution makes the duties of the Book-keeper very arduous. His knowledge of the standing and perfect accuracy of each and every account is a clear manifestation of his worthiness; he evidently keeps in close touch with his work.

We beg to extend to the officers of the institution our sincere thanks and appreciation for courtesies extended to us and especially to your worthy Treasurer, Dr. Sloan, and Mr. Evans, who rendered us every assistance possible.

Respectfully submitted,

(Signed) D. H. WISE.

(Signed) J. B. HALTIWANGER.

BANK STATEMENTS.

Pendleton, S. C., Nov. 15th, 1911.

Dr. P. H. E. Sloan, Sect'y and Treas., Clemson Agricultural College, Clemson College, S. C.

Dear Sir: At the close of business June 30th, 1911, there was \$6,144.11 to the credit of the college account, \$1,927.52 to credit Re-investment fund and \$5,644.99 to credit S. C. Experiment Station.

Yours truly,

(Signed) B. H. SADLER, Cashier.

Bank of Pendleton.

Newberry, S. C., Nov. 17, 1911.

Dr. P. H. E. Sloan, Secretary and Treas., Clemson College, S. C.

Dear Doctor: Replying to your letter of 14th inst. in which you ask us to let you know the amount to the credit of the Clemson Agricultural College in this bank at close of business June 30, 1911, beg leave to state that the amount was \$16,000.

Hoping that this will answer your purpose, I beg to remain,

Yours very truly,

(Signed) B. C. MATTHEWS, President.

The National Bank of Newberry.

Pickens, S. C., Nov. 15, 1911.

This is to certify that at the close of business June 30, 1911, there was in Pickens Bank to the credit Clemson Agricultural College the sum of sixteen thousand dollars.

Very respectfully,

Pickens Bank,

By I. M. MAULDIN, Cashier.

Pickens Bank.

Sumter, S. C., Nov. 16th, 1911.

This certifies that at close of business June 30th, 1911, there was to the credit of Clemson Agricultural College on our books sixteen thousand dollars.

The Bank of Sumter,

(Signed) BARTON WALSH, Cashier.

The Bank of Sumter.

Anderson, S. C., Nov. 16, 1911.

Mr. P. H. E. Sloan, Secretary and Treas., Clemson College, S. C.

Dear Sir: Replying to your letter of inquiry of Nov. 14th, beg to say that your credit balance with this bank at the close of business June 30th, 1911, was sixteen thousand dollars (\$16,000.00).

Yours truly,

(Signed) B. F. MAULDIN, President.

The Bank of Anderson.

Anderson, S. C.

In account with Clemson College: June 30, balance \$16,000.00.

(Signed) B. M. CATHCART, Bookkeeper.

Farmers & Merchants' Bank.

CLEMSON AGRICULTURAL COLLEGE.

Statement of the Receipts and Disbursements for the year ending June 30th, 1911.

FIFTEENTH ANNUAL REPORT

OF THE

BOARD OF TRUSTEES

OF THE

**Colored Normal, Industrial,
Agricultural and Mechanical College**

OF SOUTH CAROLINA

1911

REPORT.

To the Honorable J. E. Swearingen, State Superintendent of Education of South Carolina:

We, the Board of Trustees of the Colored Normal, Industrial, Mechanical and Agricultural College of South Carolina, hereby submit through you to the honorable, the members of the General Assembly of South Carolina, the annual report of the above named State College for consideration.

Appended hereto respectfully find report of the retiring President of the institution and of his successor, to the Trustees, embodying statement as to attendance (classified severally), industrial units pursued by the students, health, general regulations, work done in the various departments, needs of the school and financial statement of receipts and expenditures. An itemized statement as to expenditures will be found on file with State Superintendent of Education and the members of the General Assembly are earnestly urged to examine the same painstakingly.

In the general report you will note that with an attendance last session of 584 that 592 industrial units were taken, each and every student being required to take one or more. We propose to lay stress on the industries and yearly to better equip them and secure better results.

Several industrial departments have been added for this session and competent instructors secured. The farm is being developed and good results are realized.

The girls' dormitory consisting of a front of 125 by 45 feet and two wings 170 by 45 feet, two stories—all of brick—is nearing completion, and will be finished with State appropriation in hand and will be completely furnished out of balance of insurance indemnity from destruction of former dormitory, left over after completion of brick dining hall, which was constructed out of said indemnity fund.

The girls' dormitory is now only partially heated by stoves in the hallways—it being impossible as well as dangerous to use stoves in the individual rooms. The girl students are therefore not properly cared for when the weather is cold, and their health and general wellbeing very much endangered under present con-

ditions. The boys' dormitory is now steam heated, and while their plant is somewhat in need of repairs, still they are much better cared for in this respect than the girl students. The Trustees earnestly recommend that a sufficient appropriation be made by the General Assembly to remedy this deficiency. The following is a careful estimate as to the probable cost of this work:

Cost of installing heating plant, Bradham Hall (new dormitory for girls).....	\$8,000.00
Repairs heating plant, Morrill Hall (boys' dormitory) ..	1,000.00
The needs of the institution for the year, aside from receipts from the Morrill fund and Land Script for salaries and running expenses of the college, are as follows:	
Maintenance and repairs.....	\$ 5,000.00
Insurance lapsing	1,000.00
For salaries not allowed under Morrill Act.....	3,000.00
<hr/>	
Total absolute needs, for running College.....	\$ 9,000.00
Steam heating as per above estimate.....	9,000.00
<hr/>	

\$18,000.00

Should the General Assembly visit the South Carolina Military Academy at the next session, the Board of Trustees earnestly request that route be made by Orangeburg and that your honorable bodies visit this institution on the way to Charleston. An hour or two, we believe, could be well spent in visiting this State institution, inspecting the plant, the work being done and seeing what the State has spent its money for, at this negro college.

Respectfully submitted,

WILLIAM R. LOWMAN,
Secretary Board of Trustees.

J. W. FLOYD,
Chairman Executive Committee.
A. L. DUKES,

Member Local Board.

Having not been able to visit the institution this year I am not in position to sign the foregoing report as to conditions. I do not approve of the amounts asked for therein.

COLE. L. BLEASE,
Governor.

President's Report.

Orangeburg, S. C., June 30, 1911.

To the Honorable Board of Trustees of the Colored Normal, Industrial, Agricultural and Mechanical College of South Carolina.

Gentlemen: I most respectfully submit this, the fifteenth annual report of the college, showing (1) the number of students by classes for the school year ending May 3, 1911; (2) the condition of the college, and the work that has been done; (3) the receipts of funds from all sources, specific disbursements made, and all other information pertaining to the management of the college.

Total.. . . .	\$3,161.65

TRANSITIONAL YEAR.

This year has been one of transition in administration. And naturally during the latter part it has been one of waiting rather

than one of aggression. The new administration, taking office July 1st, has met with a spirit of co-operation along all lines connected with the college.

In order to arouse interest in the work, we have traveled nearly 4,000 miles through the State during the months of July, August and September. During these trips we have addressed numerous large meetings in every part of South Carolina. In attendance upon these gatherings were members of the Alumni Association and former students of the college who since have given proof of their loyalty to the school by working in their various communities to secure students, and to impress upon the people the value of the educational policies which, particularly, characterize this college. Resulting from these activities, there has been a greater demand for our catalog, and we have sent out 1,400 of them to applicants alone. From the number of applications already received, we may expect an enrollment this year that will tax our capacity.

ATTENDANCE.

The total attendance, without duplications, for the past year, is 592, a slight loss of 10 from the year previous. A detailed statement appears in the Registrar's report above.

GRADUATION.

The graduating class at our last commencement contained only one member. This was due to the advanced standard of our curriculum, requiring one year more work in all departments of the college.

BUILDINGS ERECTED.

Since the establishment of the college there have been erected the following named buildings: Morrill Hall, Bradham Hall, Floyd Dining Hall and Kitchen, Industrial Hall, Laundry, Boiler House, Steam and Electric plant, Dairy, Barns (2), Store House for farm implements, President's house, Teachers' houses (6), and a model School Building. Bradham Hall and Floyd Dining Hall and Kitchen are new brick structures erected in place of the frame buildings destroyed by fire November 24th, 1909. The south wing of Bradham Hall contains the administra-

tion offices, and when completed, will furnish additional rooms for 100 girls.

SANITARY CONDITION.

It is a matter of gratification that the improvement of the general sanitary condition of the institution has resulted in marked improvement in the general health of the students. Toilets have been provided out of the \$3,500.00 appropriated therefor by the State, also a system of baths. The college has an adequate pure water supply, and an adequate sewerage disposal system, both connected with the city of Orangeburg. Great credit is due Dr. Lin C. Shecut for the fidelity, thoroughness and efficiency he has shown in the administration of this important part of the college welfare.

HEATING FACILITIES.

At present the boys' building is heated by a steam plant located in the basement. The only provision for heat in the girls' building are a few stoves placed in the hallways which are a menace to the safety of the building and a constant danger to the many occupants therein. It is proposed to erect a heating plant for this building, thereby protecting the student body from fire casualties.

LIGHTING.

Our buildings and grounds are lighted by a complete electric system, dynamic and storage. This electric plant is used also for instruction in the courses of electrical engineering.

DEPARTMENTS.

The heads of the various departments and instructors number 30. Instruction is given under four heads: normal, industrial, agricultural and mechanical. The following named industries are taught: Agriculture, dairying and cheese-making, domestic economy, sewing, nurse training, woodworking by hand and machinery, ironworking by hand and machinery, masonry, plastering, tinning, plumbing, tailoring, harness-making, shoe-making, painting, wheelwrighting, electrical engineering, architectural and mechanical drawing. From time to time as the resources of the college will permit, other practical industries will be added.

In line with this expansion, college extension work in agriculture will also be provided. By this means an increasingly large number of people from the various portions of the State will be reached. More definite work will be done in dairy husbandry, instruction in home economics, and in agronomy subjects. Co-operation with communities, and all workers in this field will be sought for their enthusiasm, energy and distinctive success.

CONDITION OF PHYSICAL PROPERTY.

Much has yet to be accomplished in the direction and better care of the physical property of the institution. The value of this property totals a quarter of a million dollars, and the maintenance of the various buildings and other effects is most important. It would be a matter of economy to paint the entire plant.

MAINTENANCE.

Since the establishment of the college in 1896, it has been the policy of the State to appropriate a stated sum of \$5,000.00 annually for maintenance, insurance, repairs and care of the college buildings. Within the fifteen years of its existence, the plant has expanded from a value of about \$50,000.00 to a quarter of a million dollars. With this growth has been added increased facilities and demands. The repair of the buildings, the heating and electric plants, the water supply, fuel, sewerage system, stock and fencing require an expenditure annually proportionately to their development. What was sufficient to maintain these properties fifteen years ago will not do so today. The cost of material, fuel and everything else needed in the equipment and maintenance of the college has been raised. In order, therefore, to meet these larger conditions, we would ask that the annual appropriation for these purposes be increased.

Needed for maintenance, insurance, repairs, salaries and care of college buildings.	\$9,000.00
Needed for installing heating plant in Bradham Hall. . .	8,000.00
Needed for overhauling heating plant in Morrill Hall. .	1,000.00

REPORT

OF

J. FRASER LYON

ATTORNEY-GENERAL

TO THE

General Assembly of South Carolina

FOR THE

FISCAL YEAR, 1911.

REPORT.

Office of Attorney-General,
Columbia, S. C., January 1, 1912.

To the Honorable the General Assembly of the State of South Carolina:

In obedience to law, I herewith respectfully submit my fifth annual report for the year ending December 31st, 1911.

Hon. M. P. DuBruhl was reappointed Assistant Attorney-General and during the past year has discharged his duties acceptably and with ability. The services of Miss Owings, who has continued in the office as official stenographer, have been acceptable and efficient.

I desire to again call to the attention of your honorable body the difficulties attending the collection of some of the corporation license tax each year, and in this connection will repeat what was said in my report made January 1st, 1910.

A number of small corporations each year fail to pay the annual license tax. It is oftentimes difficult to get a response from such corporations upon demand being made for payment of this tax. Amounts due are usually so small and the assets of the corporation so small, that it would be an expense to the State to enter into litigation to recover the same, even in cases where the result of the action would be in favor of the State. I would also direct your attention to the very large penalty provided in the Act for the non-payment of the tax. A more reasonable rate of penalties should be provided, and the same should attach irrespective of the action of any officer or board. In the event the tax is not paid when due, 100 per cent. should be added thereto; if still remaining unpaid after 30 days, then an additional 50 per cent. should be added. It is not intended to indicate that the above penalties are exactly as they should be, but the suggestion is made to give an idea as to what should be done along this line.

I would, therefore, recommend that the corporation license tax Act be amended so as to embody the above ideas. I recommend that upon the failure of any corporation liable to the license tax to pay the same, the Comptroller-General be authorized to issue an execution directed to the sheriff of the county in which the

defaulting corporation has its office or place of business, directing that the sheriff proceed to levy upon the property of the corporation and collect the tax.

I would further recommend that the Act be further amended so as to provide that in the event the corporation shall have discontinued business, or has not property sufficient to pay the taxes in question, that the individual stockholders be made liable therefor.

I have heretofore called attention to the desirability of making a change in the manner of doing the work of the Engrossing Department. I again recommend that a resolution be adopted authorizing this office to employ a sufficient number of stenographers and typewriters to engross the bills and perform the other duties of the department. I think the work can be done in this way more efficiently and satisfactorily than it is done under the present system, and while the expense may be greater for each individual clerk, I think the total expense of the department will be much less than it is now, as the work will be done by a much smaller number of clerks. The resolution should state, or at least suggest the compensation to be paid these clerks.

1. This report contains a statement of cases pending and disposed of in the various courts, State and Federal, showing the status of same respectively.

2. Some of the opinions given by the Attorney-General's office during the year.

3. A financial statement showing the disposition of appropriations made for this office.

4. Reports of the Circuit Solicitors.

5. Criminal statistics for the year.

Respectfully submitted,

J. FRASER LYON,
Attorney-General.

Cases in the United States Circuit Court.

Carolina Glass Co. vs. W. J. Murray, John McSween, Avery Patton, J. S. Brice, and A. N. Wood.

This is an action commenced by the Carolina Glass Company in the Circuit Court of the United States to recover from the defendants herein as individuals the sum of \$19,084.38, as the State Dispensary Commission. On the 23rd day of February, 1910, an Act of the Legislature was approved whereby in Section 6 thereof it was provided that any and all cases where the State Dispensary Commission has heretofore found any amount due the State by any person, firm, or corporation on account of dealings with the State Dispensary, the several County Dispensaries heretofore existing shall, upon demand, pay to the State Dispensary Commission a sufficient amount, or so much thereof as may be on hand, to cover the amount so found to be due the State.

Acting officially and as the State Dispensary Commission, the above named defendants under the provisions of the section above quoted took over from the various county dispensaries the sum of \$19,084.38; that upon the removal of the above named defendants from office by the Governor, they turned over to their successors all money so taken from the several county dispensaries; that this action is now brought against them for the purpose of recovering against them as individuals the amount so taken under the provisions of said Act and turned over to their successors in office. This being a general statement of the facts of the case, I have deemed it necessary to undertake the defense of the case, as it is, in my opinion, a suit against the State, and at the suggestion of the defendants I have employed associate counsel.

Cases in the Supreme Court.

The State vs. John O. Edwards.

This action was brought against John O. Edwards as County Treasurer of Berkeley and the sureties on his official bond. Judgment was rendered in favor of the State, as heretofore reported, for the sum of \$5,596.23. An appeal was taken to the Supreme Court. The case was argued during the present year. The decree has been filed affirming the judgment of the Circuit Court, and the amount of the judgment has been paid.

Equitable Home Company vs. F. H. McMaster, as Insurance Commissioner.

This company is chartered under the laws of this State, with its place of business at Aiken. It applied to the Insurance Commissioner for license to do business during the year beginning April 1, 1910. The license was refused upon the ground, among others, that the contracts which this company proposes to sell is not fair and equitable, and is on the part of the petitioner impossible to perform. The petitioner brought the above case in the Original Jurisdiction of the Supreme Court to enjoin Insurance Commissioner from instituting criminal proceedings against any of the officers or agents of the company for violation of the laws of the State and to enjoin him from in any way interfering with the said company in carrying on the business which it proposes to do. A reference to take testimony has been ordered by the Supreme Court and the case is now pending and will probably be heard during the present term of the court. The reference has been held and the case will be disposed of at the present term of court.

The State, ex rel. J. Fraser Lyon, Attorney-General, Petitioner, vs. The City Council of Augusta.

This proceeding was brought to abate and remove so much of the dam across the Savannah River as is within the territorial limits of South Carolina as a public nuisance. The case was set for hearing on December 19th, 1910, but by consent was continued

until February 6th, 1911. It resulted in a consent decree directing the City Council of Augusta to place in the said dam a proper fishway, which should be built according to plans and specifications furnished by the Bureau of Fisheries of the United States government, and when completed, approved by the said bureau. It has been reported to this office that the said dam was completed as required by the order of the court, and a report has been received from the Bureau of Fisheries of the United States stating that the work had been examined by an engineer from that office and that it was approved. The decree above mentioned was made in accordance with an Act passed by the Legislature at its session in 1911.

The State vs. John W. Pendarvis.

The defendant in this case was tried by the Court of General Sessions at upon an indictment for murder and was found guilty of manslaughter. An appeal was taken to the Supreme Court and was heard at the spring term. An opinion has been filed reversing the judgment of the Circuit Court and ordering a new trial.

The State vs. Jasper Ryalls et al.

The defendants were convicted in the magistrate's court for violating a labor contract. An appeal was taken to the Circuit Court of General Sessions, which affirmed the judgment rendered by the magistrate. An appeal was then taken to the Supreme Court and has been dismissed for want of prosecution.

The State vs. Sam Hyde.

The defendant was tried and convicted upon an indictment for murder at the fall term of the Court of General Sessions at Anderson. An appeal was taken to the Supreme Court and the case was heard at the November Term, 1911. The opinion has not yet been filed.

The State, ex rel. J. Fraser Lyon, Attorney-General, vs. P. A. Brady and others, as Columbia Racing Association, W. M. Annbroster and others, and South Carolina Agricultural Society.

This is a petition in the Original Jurisdiction of the Supreme Court for an injunction to abate a gaming house or place said to

be maintained at the race track on the State Fair Grounds as a public nuisance. The case has been set for hearing on January 4th, 1912.

Carolina Glass Co. vs. James Stackhouse and others, as State Dispensary Commission.

This was a proceeding for mandamus to compel the Dispensary Commission to refund to the petitioner certain moneys which had been received by the Commission from county dispensaries, such money being the amount due by the county dispensaries to the petitioner. The proceeding was commenced without notice at the time being given to the Attorney-General, either by the petitioner or the respondents above named. Upon information that the proper officer had not been notified of the proceeding, the Court passed an order in which it was allowed that the Attorney-General might, if he should see proper to make a return to the rule on behalf of the State. Thereupon the Attorney-General made a return, which is filed in the Court, and upon this return being made the proceeding was abandoned by the petitioner.

The B. F. Johnson Publishing Co. vs. Cole L. Blease, as Governor, and others, as the State Board of Education.

This was an application made in the Court of Common Pleas for Richland County for a writ of mandamus to compel the State Board of Education to execute certain contracts which the petitioner alleged they had entered into with it to furnish certain readers for the common schools and to enjoin the said board from allowing the use of readers which the board had contracted with The D. C. Heath Company to furnish. Upon a hearing of the case, an order was made by his Honor, Judge John S. Wilson, refusing the mandamus and dismissing the petition. An appeal was taken to the Supreme Court, and is now pending.

The State vs. Eugene Hogan.

The defendant failed to appear for trial and judgment was given upon the bond. An appeal was taken to the Supreme Court, and upon the hearing of the case, the appeal was dismissed.

CASES IN THE CIRCUIT COURT.

The State vs. John Black and others, Chester County.

This case was tried at Chester, and resulted in an acquittal of Jodie M. Rawlinson and H. Lee Solomon and a conviction of John Black, as heretofore reported. An appeal was taken to the Supreme Court. Pending this appeal the defendant, John Black, has been pardoned by the Governor and no further proceeding has been had in the case.

The State vs. H. H. Evans.

This was an indictment against H. H. Evans, a former director of the State Dispensary, charging him with accepting rebates for his own use and not for the benefit of the State. The case was pending in the Circuit Court for Newberry County, and at the July term, 1911, a *nolle prosequi* was entered by order of the Court.

The Bank of Camden vs. D. M. McCaskill, County Treasurer.

This was an action commenced in the Court of Common Pleas for Kershaw County to recover the sum of \$704.70 taxes which the plaintiff claimed had been unlawfully assessed and collected on the shares of stock in the hands of the stockholders in said bank for the year 1909. In the year 1909 the president and cashier of said bank made a return to the county auditor giving the names of the stockholders, the number of shares held by each and the value of shares for the purpose of taxation, as required by law. The total value of the shares as taxed by the board of assessors was \$145,000. The bank claimed the right to deduct from the value of these shares \$18,000 of non-taxable school bonds and \$40,000 of cotton mill stock which were held by the bank. This claim was disallowed and the taxable value of the shares was fixed by the county board of equalization at sixty per cent. of the total value above stated. The real estate owned by the bank was assessed at \$10,000 and this amount was deducted from the taxable value of the shares. The bank paid the taxes under protest and brought suit to recover for the amount stated above, which was the difference between the amount of taxes paid and what the taxes would have been if the deductions claimed had been allowed. The cause was heard by consent before his Honor Judge Robert

Aldrich in Columbia in June, 1911, and a decree was rendered disallowing the deductions claimed by the bank and dismissing the complaint, the judge holding that the taxes assessed upon the value of the shares in the hands of the shareholders was a tax against the individual shareholders upon their individual property and not a tax upon the bank; that no tax is levied under the laws of this State against any property owned by a bank except real estate; that none of its bonds or other securities are returned for taxation or taxed; that the non-taxable securities held by the bank had not been taxed.

Central National Bank vs. C. M. Earle, County Treasurer.

This action was brought in the Court of Common Pleas by the Central National Bank of Spartanburg to recover the sum of \$570 taxes which the plaintiff paid for the year 1909, and which it claimed had been unlawfully collected. The plaintiff bank is the owner of \$30,000 worth of non-taxable school district bonds and claimed the right to take these bonds from the value of the shares of stock in the hands of shareholders in ascertaining the taxable value of said shares. The deduction was disallowed by the county board of assessors. The plaintiff then paid the taxes assessed against the shareholders under protest and brought this action to recover the same above mentioned which was the difference between taxes paid and what the taxes would have been if the deduction had been allowed. The cause was heard before his Honor Judge John S. Wilson at Spartanburg, and a decree has been filed dismissing the complaint upon the same grounds set forth in the case of the Bank of Camden vs. D. M. McCaskill, County Treasurer.

The State, ex rel. W. B. Taylor and Guy B. Taylor, Relators, vs. Cole L. Blease, J. E. Swearingen and others, as the State Board of Education.

This was a proceeding in the Court of Common Pleas for Richland County against the above named defendants for mandamus to compel the State Board of Education to appoint Guy B. Taylor to a scholarship at Clemson College. Guy B. Taylor and Jefferson Sharp were applicants from Lexington County for said scholarship. The faculty of Clemson College reported that Guy B. Taylor made the highest mark on competitive examination and Jeffer-

son G. Sharp the next highest. The Board of Education awarded the scholarship to Jefferson G. Sharp for the reason that Guy B. Taylor had attended Clemson College the year preceding as a student in the preparatory class. Upon the hearing his Honor, Judge John S. Wilson, held that the law had been properly construed by the State Board of Education, and made an order dismissing the petition for mandamus. An appeal was taken to the Supreme Court and is now pending.

The State vs. James F. Detyens.

This was an action brought by the State in the Court of Common Pleas for Georgetown County against James F. Detyens, as county treasurer, and the sureties on his official bond, to recover the sum of \$9,647.25, which the said Detyens had failed to turn over to his successor in office. The defendants in their answer admitted the allegations of the complaint except as subsequently denied and explained in the answer and then set up as a defense that the sureties were not liable for the amount received for the sale of fish stamps because the said stamps were never receipted for by the defendant, James F. Detyens, as county treasurer, so as to render his official bond liable therefor, and that they were not liable for the amount of commutation road tax charged against said treasurer, because the same had been collected after the expiration of the time fixed by law for the payment of the same. The State demurred to the answer on the ground that it failed to state facts constituting a defense; that it appeared upon the face of the answer that the sums of money for which the sureties denied liability were received by the county treasurer, and that there was no allegation in the answer that he had turned the same over to his successors in office. The cause was heard before his Honor Judge Ernest Gary upon this demurrer, and a decree was rendered by him sustaining the demurrer and dismissing the complaint. The defendant appealed to the Supreme Court and the case is now pending.

Vinie Jackson, Plaintiff, vs. James D. McDowell and the State of South Carolina.

This is an action brought by the plaintiff in the Court of Common Pleas for York County for the partition of certain real estate and making the State of South Carolina a defendant, as

having some possible interest in the land. An answer has been filed by the Attorney-General on behalf of the State in which it is alleged that he has no knowledge sufficient to form a belief as to any of the allegations alleged in the complaint, and further that this is a suit against the State within the meaning of the Eleventh Amendment of the Constitution of the United States. No further proceedings have yet been had in the case.

*Atkins, Cotton Mills and others vs. G. McD. Hampton, Acting
Commissioner; B. L. Caughman and John G. Richards, Constitu-
ents of the Railroad Commission of South Carolina.*

This was an action brought to restrain the defendants from interfering with the suspension of a certain order of the Railroad Commission dated 29th December, 1910, known as No. 99, and which referred to the litigation on the cotton piece goods rate from the mills of South Carolina to Charleston. It was begun by the service of a summons and complaint with rule to show cause, restraining order, etc., granted by Judge Ernest Gary on April 3rd, 1911. Before said date, an agreement was reached between the railroads and the plaintiff, and upon this fact being communicated to the Attorney-General, as counsel for the defendants named, a continuance was agreed upon and the case was settled by an agreement with the railroads and the mills. In compliance with this agreement, on the 7th day of June, 1911, the Hon. Robert Aldrich, presiding at the term of Court then being held in Richland County, passed an order of discontinuance and later the Railroad Commission discontinued the petition of the railroads for a rehearing.

The State vs. J. B. Wylie, J. B. Towill, L. W. Boykin, W. O. Tatum and others.

The above defendants are charged with conspiracy, bribery and accepting rebates for their own use in their dealings with the late State Dispensary. It is not deemed necessary to set forth fully the charges against each of them.

The case against J. B. Towill, L. W. Boykin and W. O. Tatum, charged with conspiracy to defraud the State, known as the label case, was tried at the September term of the Court for Richland County. The jury failed to agree upon a verdict and a mistrial was ordered. The case is still pending.

OPINIONS.

The Governor: His powers, etc.

March 1, 1911.

Hon. C. L. Blease, Columbia, S. C.

Dear Sir: Your communication to the Attorney-General enclosing a letter of Hon. T. G. Croft and asking that he advise you as to the questions of law suggested by the letter has been received. The two questions of law suggested are:

First. Can the Governor order an election for an intendant and other officers for the town of Montmorenci?

Second. Has the charter of the town been forfeited by the fact that it has not been used and there has been no town government for several years?

Section 1941, Code of Laws, Volume I, provides: "Whenever it shall happen that a sufficient number of the Board of Intendant and Wardens to constitute a quorum shall be prevented from discharging their duties and functions by reason of death, resignation or other disability, the Governor of the State is authorized and directed to order an election for Intendant and Wardens of said town, and to appoint all officers necessary for the holding and declaring of said election, who shall proceed to discharge their respective duties in the same manner and with the same effect as though they had been appointed by the municipal authorities provided for in this Article."

As to the second question. The charter is not forfeited by the failure to elect an intendant and wardens and exercise the powers granted by the charter for several years as stated in Mr. Croft's letter. Municipal corporations can only be dissolved by the Legislature or pursuant to some general enactment on the subject. The only statute on this subject is the act of the General Assembly, approved March 1st, 1909. This act provides that whenever it shall appear that a town of less than 1,000 inhabitants has decreased in population since its incorporation to less than 100 inhabitants, the charter of such town shall thereby become forfeited, and also that whenever a majority of the qualified voters of any town of less than 300 inhabitants shall file with the intendant and wardens a petition asking for an election on the question of surrendering their charter, an

election shall be ordered to determine that question, and if two-thirds of those voting shall vote in favor of surrendering such charter the intendant and wardens shall certify the result to the Secretary of State, who shall immediately thereupon cancel the charter.

Mr. Croft's letter does not state the size of the town of Montmorenci, nor does he state whether or not the inhabitants have decreased to less than 100. Assuming that the town belongs to the class of less than 1,000 inhabitants and that they still have more than 100 inhabitants, I am of the opinion that you can order the election for an intendant and wardens. The statute does not provide for the election of a clerk and treasurer, as asked for in Mr. Croft's letter, and unless an election of these officers is provided in the charter, I do not think they can be chosen at the election which you are asked to order.

Yours very truly,

M. P. DeBRUHL,
Assistant Attorney-General.

March 23, 1911.

Gov. C. L. Blease, Columbia, S. C.

Dear Sir: Replying to your letter of the 14th inst., I will say:

M. A. Goodman was indicted by the grand jury of Richland County. Upon his giving me certain evidence showing the guilt of former dispensary officials, and furnishing me information as to how other evidence of similar nature could be obtained, nol. pros. was, or will be in due time, entered upon indictments against him.

J. T. Earley and J. B. Wylie testified as witnesses for the State in several cases. Their testimony has largely appeared in public prints. On account of this I shall nol. pros. indictments against them, and have agreed to institute no further proceedings against them in behalf of the State.

Henry Samuels testified before the Dispensary Commission and in the criminal court as a State's witness. I have, therefore, agreed to discontinue prosecution against him.

I. W. Bernheim and others were indicted in Chester, and it was agreed that he as a witness should give bond in the sum of \$5,000, or deposit in lieu thereof \$5,000 in cash, and if he shall not duly appear the cash to be forfeited, otherwise to be turned over to the State Dispensary Commission. \$5,000 has

been deposited with the clerk of court at Chester. I. W. Bernheim and B. Bernheim paid the State Dispensary Commission at one time \$30,000 and at another \$34,700 for avercharges on liquors sold the dispensary. Taking into consideration all the circumstances, I have agreed to nol. pros. as to I. W. Bernheim.

Upon indictments against D. Weiskopf nol. pros. will be entered upon his testifying the truth as a witness in behalf of the State with reference to the sale of large quantities of labels sold by Nivison-Weiskopf Company to the State Dispensary.

J. S. Farnum was indicted, tried, and acquitted. Thereafter he plead guilty and was fined \$5,000. Upon other indictments against him, nol. pros. was, or will be entered.

C. W. Dudley, in addition to giving evidence to the State Dispensary Commission, testified in Chester in the case against John Black and others as a State's witness, and I have agreed not to prosecute him.

B. M. Wilson has furnished information concerning certain transactions between the Richland Distillery Company and the former State Dispensary and has agreed to testify in regard thereto, and I have agreed that I will not prosecute him for, or on account of his connection with the transactions about which he testifies.

G. H. Charles gave information generally as to dispensary transactions, testified before the grand jury in the case against H. H. Evans, and was employed as a detective. On account of the above, it was not my purpose to prosecute him, even though it should have been determined that an action would probably lie against him. I am informed that Mr. Charles has recently died.

W. D. Roy testified as a witness for the State in the case against John Black et al., and before the grand jury, besides giving assistance in working up the cases. It is my purpose not to prosecute him.

I cannot recall any one else who has agreed to turn State's evidence, or whom I have agreed not to prosecute, but if I find that any name has been in any manner overlooked, I will advise you upon the ascertainment thereof. I cannot say definitely, but am of the impression that among those whom I have agreed not to prosecute the following were suggested by Mr. Felder as persons who would give evidence for the State in such actions as might be instituted: W. D. Roy, B. M. Wilson, D. Weiskopf,

J. T. Earley, C. W. Dudley, and M. A. Goodman. I am unable to make the definite statement that Mr. Felder suggested that the persons above should not be prosecuted, for the reason that I, as Attorney-General, have exercised this power upon my own responsibility, and in accordance with my own judgment.

Referring to that part of your letter which asks what civil actions were settled or compromised and the terms thereof, will say: That the civil actions instituted were in charge of Messrs. Anderson, Felder, Rountree & Wilson, Mr. W. F. Stevenson, and Mr. B. L. Abney, Messrs. Abney and Stevenson having active charge and management thereof. Mr. Stevenson has furnished me the following list of civil actions which have been compromised. These actions were compromised for the payment of money, the amount of which is stated opposite the names of the defendants given below:

Gallagher & Burton.. . . .	\$11,395.94
Lannahan & Sons.. . . .	14,083.46
Grabfelder & Co..	15,297.17
Roskam-Gerstley Co..	3,066.37
Freidman-Keiler Co..	1,585.00
Meyer, Pitts & Co..	3,437.50
Jack Cranston Co..	802.21
American Bonding Co..	500.00

In several of the above cases the defendants had presented claims against the State, which were disallowed. Such amounts are in addition to the amount of moneys to which reference is above made.

The act of 1910 authorized the Dispensary Commission to make settlement of such claims.

Answering your inquiry as to that part of the contract entered into between the State Dispensary Commission and Anderson, Felder, Rountree & Wilson, wherein it is provided that Anderson, Felder, Rountree & Wilson are clothed with full power, subject alone to the approval of the Attorney-General of the State, to offer any of the parties involved immunity from prosecution, will say: The power to offer immunity was given this firm, but the power to grant immunity—that is to refuse to prosecute, or in case of indictment, to nol. pros.—was left, as the law provides, in the discretion of the Attorney-General. In view of this power of the Attorney-

General, this provision was inserted in the contract. Whether any person should not be indicted, or if indicted, should have nol. pros. entered on the indictment against him remains, so far as the contract is concerned, just as the law provides. The policy of the State to allow immunity under the circumstances may be fairly inferred from the act of 1906 providing for the investigation of the dispensary, wherein it is provided that no testimony given by witnesses before the committee shall be used against them in a criminal prosecution. This provision of law was perpetuated and became a part of the law under which the State Dispensary Commission was created. Acts of 1907, page 835. So it must follow, independently of the law giving such power to the Attorney-General, that such of those whose names are mentioned above, who testified before the investigating committee, or the State Dispensary Commission, practically have immunity under this act. But aside from the manifest policy of the Legislature, as contained in the above mentioned act, the Attorney-General has discretion as to when, how, and against whom to proceed in criminal cases. He has the power to enter a nolle prosequi by virtue of his office independently of the court. Ency. of Law 23, page 275 and 276. *State vs. Howard*, 15 Rich. Law, 274; *State vs. M'Kee*, 1 Bailey, 651. The rule is laid down in the M'Kee case that the prosecuting officer may enter a nolle prosequi at any stage of the proceedings, until the jury are charged; but he cannot do so afterwards, not at least in case of an indictment for a capital offense, and if he is permitted to do so, its effect is the acquittal of the prisoner. The above rule is also recognized in Archbold's Criminal Practice, Volume I, page 317. In Bishop on Criminal Procedure, 2 Edition, Volume I, section 1020, it is said: "If the prosecutor in the English practice wishes to make use of one of the defendants as a witness, the court will permit a verdict of acquittal to be taken at once in his case, and thus he will be rendered competent. In our own States the ready method in such circumstances would ordinarily be for the prosecuting officer to enter a nol. pros. as to the defendant whose testimony he wished to use." The following rule is laid down by Bishop, Volume I, section 1076: "In the United States, where prosecutions are instituted and carried on by a public prosecutor, who acts directly for the government and protects its interests, there is an evident propriety in considering it to be within the exclusive

discretion of this officer to determine whether or not an accomplice shall be permitted to become State's evidence, as it is sometimes expressed with us: and whether, if he does, he is afterwards entitled to be no further prosecuted, by reason of what is thus done. It is not easy to say what, in fact, is the practice on this point in all the States, but it is believed that, in most of them the prosecuting officer acts in such cases upon his own discretion, which is little, if at all, controlled by the courts." That such discretion is reposed in the prosecuting officer independently of the court in this State is shown in the *M'Kee* case and others hereinafter referred to. In the case of *Rogers vs. Hill*, 22 R. I., page 498, it is said: "The practice of entering a nolle prosequi to informations is very ancient, but to indictments, it began in the latter end of the reign of Charles II." It is further said in this case that "there are three periods of a prosecution in which a nolle prosequi may be entered; before a jury is empanelled, while the case is before the jury, and after verdict. In the first it is perfectly clear that a nol. pros. may be entered at the pleasure of the prosecuting officer, such is the constant practice. It may be that the indictment is defective, and he may wish to procure another; he may discover that the evidence will turn out differently from what he expected, and he may wish to vary the charge to make it conform to the proof, or he may have good reason for not wishing to prosecute at all. There may be innumerable causes for discontinuing the prosecution, all of which he may judge upon his official responsibility. In many cases the discontinuance may operate to the prejudice of the defendant, but never to the injury of his legal rights. It is not to be presumed that this officer will violate his duty, or act oppressively." And it is further said in the case that he exercises that power wholly upon his official responsibility without the advice or permission of the court.

In the case of the *State vs. Thomas*, 75 S. C., 479, 480, the rule in the *M'Kee* case as to the power to enter a nolle prosequi is reaffirmed.

In the case of the *State vs. Cardoza*, 11 S. C., 197, it appears that Richard H. Gleaves, Samuel J. Lee, Josephus Woodruff, A. O. Jones, and Francis L. Cardoza were indicted for conspiracy. The Attorney-General, Hon. James Connor, called this case for trial and entered a nolle prosequi as to the defendants

Samuel J. Lee, Josephus Woodruff, and A. O. Jones; Richard H. Gleaves not having been arrested, the trial proceeded against Francis Cardoza alone. See page 201. It appears from the case as recorded that Gleaves, Woodruff, and Jones were used as State's witnesses. It will also be noted with interest that three of my most distinguished predecessors in office, Hon. LeRoy F. Youmans, Hon. James Connor, and Hon. O. R. Miles, appeared as attorneys for the State.

The following quotation from "A Voice from South Carolina," Leland, throws an interesting light upon the practice of the prosecuting attorney in this State granting immunity. It is in reference to prosecutions for frauds committed during the reconstruction:

"More than thirty 'True Bills' have been found by Grand Juries of Richland County—not very much varied in their character—and covering a long list of names. Sometimes five or six names would be embraced under the same indictment, and sometimes the same name would be found several times repeated. For instance, the name of Cardoza will be found on *nine* separate indictments.

"With this explanation, only the following names can now be found on the docket: H. H. Kimpton, D. H. Chamberlain, R. K. Scott, F. J. Moses, N. G. Parker, F. L. Cardoza, Robert Smalls, J. L. Neagle, F. S. Jacobs, (Solomon's Bank,) B. F. Whittemore, Solomon L. Hoge, Y. J. P. Owens, Thos. C. Dunn, R. H. Gleaves, Samuel J. Lee, Josephus Woodruff, A. O. Jones, and L. Cass Carpenter.

"Of these, Parker, L. Cass Carpenter, Cardoza and Smalls have been tried and convicted on one indictment each; so far, the other criminals have not been very accessible.

"Immunity has been granted to very many—mostly members of the Legislature—as in the seventy-five examined in Patterson's case.

"In other cases, as Woodruff's, Jones', Nash's, and some others, promises of restitution were exacted and complied with, and thus the State was relieved of a large amount of indebtedness by the surrender of papers. How much, if any, money was refunded, has never come to light." On page 228 of this book it is stated that "N. G. Parker was tried and convicted in the summer of 1875 under an indictment of larceny and breach of trust with fraudulent intent. Escaped from jail; was recap-

tured. and finally pardoned for that offense on the promise to tell all he knew.

I have quoted at length from the above authorities, in order that it may appear that it has always been the law and the practice in this State for the prosecuting officer to determine who should and who should not be prosecuted, and whom he should allow to become State's evidence.

Yours very truly,

J. FRASER LYON,
Attorney-General.

March 17, 1911.

Gov. C. L. Blease, Columbia, S. C.

Dear Sir: In response to your request for an opinion as to whether you have authority to appoint a board of registration for Aiken County will say: Section 176, Code of Laws, 1902, Volume I, provides, between the first day of January and the 15th day of March, 1898, and between said dates in every second year thereafter, the Governor shall appoint, by and with the advice and consent of the Senate, if in session, and if not in session, subject to its approval at its next session, subject to removal by the Governor for incapacity, misconduct, or neglect of duty, three competent and discreet persons in each County, who shall be citizens and qualified electors thereof and who shall be known as the County Board of Registration of _____ County, whose duty it shall be to register and to conduct the registration of the electors who shall apply for registration in such County as herein required. Their office shall be at the county seat, and they shall keep a record of all their official acts and proceedings. Their term of office shall be for two years from the date of their appointment, and they shall continue in office until their successors shall have been appointed and shall qualify: Provided, that in case of a vacancy for any cause in the office of the Board of Registration, the Governor shall fill such vacancy by and with the consent of the Senate, as aforesaid.

In view of the above statutory provision, if it be a fact that supervisors of registration were appointed in 1910 subsequent to the adjournment of the General Assembly, and if the appointment of such persons was not approved by the Senate at the session of 1911, then, in my opinion, the right of such appointees

to hold office terminated with the adjournment of the Senate, and under the provisions of the Act above referred to, you have authority to make appointments subject to the approval of the Senate at its next session.

It is said in *Louisiana vs. Rareshide*, 32 La. Ann., 637 (1937), that, "where the appointment is subject to the action of the Senate, if the vacancy is accidental and occurs previous to, or during the recess of the Senate, and the concurrence of that body has not been had, the appointment is temporary and contingent upon confirmation. In the event it has not been confirmed either because the name was not sent in, or was rejected, the appointment becomes inoperative from the moment of adjournment or from the moment of its rejection, as the case may be." This rule in substance is supported by 29 Cyc., 1372, and cases cited and 23 Encyclopedia of Law, 346.

Yours very truly,

J. FRASER LYON,
Attorney-General.

June 6, 1911.

Gov. Cole L. Blease, Columbia, S. C.

Dear Sir: In reply to your request for an opinion on the petition of certain citizens of Eutawville that you order an election for a town council of the said town, I beg to say that I have examined the petition carefully and do not think that this matter comes within the power conferred upon you to order such elections. It seems from the petition and papers filed, that an election has been held, and the questions raised by the petitioners relate entirely to the validity of such election. Section 1941, Code of Laws, Volume I, confers upon you the power to order an election for intendant or warden of a town whenever it shall appear that a sufficient number of the board of intendants and wardens constituting a quorum shall be prevented from discharging their duties by reason of death, resignation or other disability. These conditions do not exist in Eutawville so far as appears from the petition presented. The questions involved are questions which, I think, must be settled by a decision of the court.

I return herewith the papers.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

June 7, 1911.

Gov. Cole L. Blease, Columbia, S. C.

Dear Sir: In reply to your verbal request for an opinion as to whether, under the law, you should order an election to determine the matter of annexing a portion of Williamsburg to Florence County, I beg to say I have examined the report of the commissioners made to you on April 10th, 1911, and find that they have reported that all the requirements of the law have been complied with, with the exception of one matter, which they do not mention.

Section 580, Volume I, Code of Laws, requires that the petition for incorporating a portion of one County within the limits of another County shall be signed by one-third of the qualified electors residing in the area sought to be cut off, and further provides that after the petition is filed the same proceedings shall be had as in the formation of new Counties. The report does not show, as I think it should do, whether the petition was signed by the required number of qualified electors. However, in this particular the report may be amended.

Both the constitution and the statute provide that whenever the conditions prescribed for the establishment of a new County have been complied with, the Governor shall order an election upon the question. I think this provision is mandatory and applies to changing County lines as well as to the formation of new Counties.

I return the papers herewith.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

June 24, 1911.

Gov. Cole L. Blease, Columbia, S. C.

Dear Sir: Your letter of June 23rd, asking whether or not you have power to appoint a person to act as probate judge for Marlboro County in the matter of approving the last will and testament of H. H. Calhoun in solemn form has been received. Section 43 of Civil Code (which is the Act of 1870) provides that when any judge of probate is disqualified on account of interest in an estate, the probate judge of the adjoining County shall have jurisdiction, and upon application shall attend at some time not conflicting with his duties in his own

County and hear and determine such matters. Section 6, article 5 of the constitution of 1895, prescribing the manner of appointing a special judge in the Supreme Court where one of the justices is disqualified, directs that the same course shall be pursued in regard to circuit courts and inferior courts. In the case "In Re Estate of Mears," 75 S. C., 482, the probate judge of Hampton County called upon the probate judge of Beaufort County to hold the probate court in Hampton and admit to probate a will of which the probate judge was executor. Judge Aldrich held in the circuit court for Hampton County that the probate judge of Beaufort County had no jurisdiction in the matter above referred to. Thereafter application was made to the Governor to appoint a probate judge for the performance of this duty, and the probate judge of Barnwell County was appointed and commissioned by the Governor "for the trial and determination of all matters that may come up pertaining to the said will of the said W. H. Mears in any way or manner." The probate judge so commissioned attended in Hampton County and issued letters testamentary to the executors named in the will. An appeal was taken, first to the circuit court and then to the Supreme Court. Without specifically deciding the right of the Governor to make the appointment, the Supreme Court affirmed the action of the probate court.

I think you have the right to make the appointment asked for, but suggest that you appoint the probate judge, either from Darlington, as asked for, or some other adjoining County.

I return herewith the papers.

Yours very truly,

M. P. DeBRUHL,
Assistant Attorney-General.

Aug. 11, 1911.

Gov. Cole L. Blease, Columbia, S. C.

CLAIM OF SHERIFF M. M. BUFORD FOR SERVICES IN RE REQUISITION
FOR T. B. FELDER.

Dear Sir: Section 6, Criminal Code of Laws, 1902, provides, among other things, that in cases of requisition for delivery of fugitives from justice, the agents appointed by the Governor to bring such fugitives into this State shall receive in compensation for their services the sum of \$3 per day for the time actually employed, and shall be reimbursed their expenses

actually and necessarily incurred in the performance of their duties, and that upon presentation to the Governor of the accounts of such agents itemized and verified, the Governor, if he approve the same as correct, shall endorse his approval thereon, and upon presentation to the Comptroller-General he shall draw his warrant for the amount thereof out of the regular contingent fund of the Governor. Reference being had to said section, its provisions will more fully appear. Nowhere in this section is the compensation of the agent appointed by the Governor made contingent upon his success in securing the return of the party for whom requisition is made.

It is, therefore, my opinion that if Sheriff Buford was appointed by you as agent for the State, and that he was actually employed for the days set forth in his account, and actually incurred the expenses set forth therein, that he is entitled to be paid the amount of his claim out of your contingent fund as Governor.

Enclosed find returned herewith Sheriff Buford's itemized, verified statement.

Yours very truly,
J. FRASER LYON,
Attorney-General.

Officers and offices.

Jan. 21, 1911.

Edgar Madden, Esq., 203 Broadway, New York, N. Y.

Dear Sir: Your letter of the 13th inst., addressed to Hon. Cole L. Blease, Governor of South Carolina, has been referred to me by the Governor to answer.

I beg to advise you that no executive officer of South Carolina has authority to bind the State in any manner whatsoever to the payment of any bonds heretofore issued in the name of the State. The payment of all debts and the disposition of all claims for payment of money made against the State are matters resting solely in the authority and discretion of the General Assembly. If you have any claim against the State which you think valid, you should present it to the General Assembly to be disposed of in accordance with the authority and discretion of that body.

Yours very truly,
J. FRASER LYON,
Attorney-General.

Feb. 21, 1911.

Mr. T. J. Betenbaugh, Union, S. C.

Dear Sir: The Attorney-General has handed me your letter of the 20th and requested me to write you.

The term of office of the present auditor of your County begins on the date of his appointment to that office and not on the date of his commission. This question was settled by the Supreme Court in the case of Verner vs. Seibels, South Carolina Reports, Volume 60. Mr. Browning, representative from your County, came to this office and had a full consultation with the Attorney-General on this question. I do not know the date of the appointment of the present auditor, but he is entitled to hold office for the full term, beginning with that date.

Yours very truly,

M. P. DeBRUHL,
Assistant Attorney-General.

Feb. 27, 1911.

Mr. J. C. Bethea, Clerk of Court, Dillon, S. C.

Dear Sir: Your letter of the 25th inst., is at hand. It is my opinion that the Legislature has authority at will to increase or diminish your salary as clerk of court at any time. Article 5, section 2 of the Constitution creates the office of clerk of court, but nothing is said as to compensation. No restriction being placed upon the Legislature in this respect, that body has authority to dispose of this matter as it may deem proper. I judge from your letter that you have an idea because the Attorney-General's compensation can neither be increased nor diminished during his term of office that it follows that the clerk of court's may not be increased or diminished during his term of office. If you will refer to article 4, section 24 of the Constitution, you will find that it is specifically provided that the compensation of the Attorney-General, together with other officers therein named, shall be neither increased nor diminished during the period for which they shall have been elected. This provision does not apply to clerks of court.

Yours very truly,

J. FRASER LYON,
Attorney-General.

March 4, 1911.

Dr. Joseph Hicks, Magistrate, Calhoun Falls, S. C.

Dear Sir: Your letter asking what course you should take if a person applies to you as magistrate for an arrest warrant for violation of a labor contract, whether you should refuse the warrant or act as heretofore, has been received. I suppose the doubt in your mind as to your duty in this matter has arisen from the recent decision of the United States Supreme Court in the case of Bailey vs. the State of Alabama. In that case the Supreme Court of the United States decided that the statute of Alabama, in so far as it makes the refusal to perform the labor called for by the contract prima facie evidence of an intent to defraud, is in violation of the 13th Amendment of the United States. The court also decided that such a statutory provision offends against the acts of Congress forbidding peonage.

This provision in the statute of Alabama is in substance the same as the provision in the statute of this State.

I think you can issue the warrant in such a case, and try the case, but before any conviction can be had it will be necessary to prove the fraudulent and malicious intent, either by direct or circumstantial evidence, just as any material fact in any case must be proved. You cannot consider the mere act of violating the contracts prima facie evidence of the fraudulent and malicious intent—this must be proved. This seems to me to be the meaning of the decision in the Alabama case.

The acts of Congress against peonage make any person who assists in any way in placing a person in a condition of involuntary servitude, either by assisting or causing, or otherwise, liable to criminal prosecution in the courts of the United States.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

March 4, 1911.

County Commissioners.

Mr. Charlton DuRant, Manning, S. C.

Dear Sir: The Attorney-General has requested me to reply to your letter of March 2nd in regard to the employment of certain detectives to aid in the enforcement of prohibition in your County who were paid by the County Board of Commissioners.

I do not know of any law which allows the County Commissioners to employ detectives for this purpose, or to authorize their employment by any one else. Section 38 of the Act of the Legislature, approved February 16th, 1907, known as the dispensary law, makes it the duty of the sheriffs and their deputies, magistrates, constables, rural police, city and town officials to enforce the provisions of that Act and provides that if those officers fail to enforce the law, the Governor shall enforce the same, and is authorized to appoint such constables and detectives as may be necessary. The same section provides that the salaries and expenses of such officers in those Counties which have no dispensaries shall be paid out of ordinary County funds.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

May 25, 1911.

General W. W. Moore, Columbia, S. C.

Dear Sir: In reply to your verbal request for an opinion from this office as to whether a captain of a company in the National Guard can also hold a position on the Governor's staff I beg to say:

1. I do not think this matter comes within the provisions of section 2, article 2 of the Constitution of this State.

2. Section 6 of the Military Code provides that the staff of the Governor shall consist of the Adjutant-General, with rank of brigadier-general, one adjutant-general with rank of colonel, a quartermaster-general, a judge advocate-general, a commissary-general, a surgeon-general, a chief of ordnance, each of whom shall have the rank of colonel; three aides-de-camp with rank of colonel and as many additional aides-de-camp with rank of lieutenant-colonel as the Governor shall consider necessary. The section provides also that the three aides-de-camp with the rank of colonel shall be selected from commissioned officers of the National Guard, while the aides-de-camp with the rank of lieutenant-colonel may be appointed without restriction as to the source of selection. Under the provisions of this section I see no reason why a captain in the National Guard may not be a member of the Governor's staff, unless the duties of the two positions are so incompatible that they cannot be performed

by the same person. The statute does not prescribe the duties of the Governor's staff, and, therefore, we must assume that each officer of the staff has those duties to perform, which, under the rules governing the United States army, belong to the position which he holds. If, when the militia is in active service, the duties of aides-de-camp on the Governor's staff would be such as to prevent a captain holding this position from performing his duties as captain, I do not think he could hold both positions.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Oct. 10, 1911.

Judge Robert MacFarlan, Darlington, S. C.

Dear Sir: Your letter of the 7th inst. is at hand. I am not familiar with any statute which forbids a probate judge acting as agent for a surety company going security for guardians and administrators in his court, nevertheless, it would very likely oftentimes happen that a probate judge acting as such agent might find himself disqualified from rendering a decree because of the fact that he is the agent for the surety which may be held liable as the result of an accounting made up in the probate court. I also think that this disqualification would likewise arise in case the probate judge shares in the premiums paid upon the bond; in other words, he would not be a disinterested judge in case of a conflict between the ward on the one hand and the guardian and his surety on the other.

As to the last question I will say that I am not familiar with a practice in any of the probate courts in this State whereby one person is appointed guardian of two or more children in one appointment with one bond. I think the statute contemplates that the estate of each minor shall be regarded and treated as a separate and distinct estate, having no connection with any other whatsoever, and the fact that one person happens to be made guardian for several children, even though such children be brothers and sisters, can in no wise change the fact that the estates of the different children are separate and distinct. This being the case, it is my view that the probate judge should require a separate bond for the estate of each ward and that he should issue separate letters of guardianship for each ward.

This being my idea, I do not think the question of constructive costs can arise.

Yours very truly,
J. FRASER LYON,
Attorney-General.

Oct. 27, 1911.

Hon. A. F. Lever, Lexington, S. C.

Dear Sir: Your letter to the Attorney-General asking whether an intendant of a town can at the same time be a trustee of a public school has been received. Both of these positions are offices under the law of this State, and cannot, therefore, under the provisions of the constitution, be held by one person at the same time.

Yours very truly,
M. P. DEBRUHL,
Assistant Attorney-General.

Nov. 3, 1911.

W. A. Mason, Treasurer, Hampton, S. C.

Dear Sir: Your letter of the 2nd inst. is at hand. Referring to your duties under Act 246 relative to issuing and selling bonds for building school houses, I will say that it is my opinion that the board of trustees should deliver to you the proceeds of the sale of bonds in question and that you should pay out the same on their order countersigned by the Superintendent of Education.

Yours very truly,
J. FRASER LYON,
Attorney-General.

Superintendent of Education and Schools.

Feb. 11, 1911.

Mr. W. C. Rogers, County Supt. of Education, Marion, S. C.

Dear Sir: In your letter you state that the trustees of school district No. 37 in Marion County employed a young lady to teach for five months; that she taught two months and when she came back to her work, after Christmas, the patrons of the school, without assigning any reason, refused to send their children to school to her; that the teacher employed holds herself

in position to teach the school whenever any children attend, and that the board of trustees recognize their contract with her and issue her pay warrants in accordance with law for her services and in accordance with the terms of her engagement they made with her to teach the school. In view of these facts, you ask if you should, as County Superintendent of Education, approve the warrants drawn by the trustees for her salary. It is my opinion that the teacher in question is entitled to her salary, and when warrants properly signed by the trustees are presented to you, that you should approve the same, in order that the teacher in question may draw her salary, to which she is clearly entitled under the statements in your letter.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Nov. 28, 1911.

Hon. J. E. Swearingen, State Superintendent of Education,
Columbia, S. C.

Dear Sir: Your letter to the Attorney-General asking if the Colleton County Board of Education has the power under section 5, article 11 of the Constitution and section 1205, Code of Laws, volume 1, to alter the lines of the Walterboro special school district, which was created by an Act of the General Assembly, has been turned over to me for reply. I have examined the law on the subject, and am of the opinion that the County Board of Education has the power under the statute to so alter school district lines as to add more territory to the said special school district as originally created, and that such action will not be a violation of the section of the Constitution above mentioned.

Yours very truly,

M. P. DeBRUHL,
Assistant Attorney-General.

Bank Examiner and Banking.

Feb. 22, 1911.

Mr. B. J. Rhame, State Bank Examiner, Spartanburg, S. C.

Dear Sir: It is my opinion that a banking corporation itself cannot be a subscriber to its own stock. See Cook on Corporations, 5 Edition, Volume I, section 64.

Whenever a bank officer renders a false report to your office under oath, and such oath is required by law, it is my opinion that he is guilty of perjury and may be prosecuted under the provisions of section 256 of the Criminal Code, which is as follows: "Whoever shall willfully and knowingly swear falsely in taking any oath required by law and administered by any person directed or permitted by law to administer such oath shall be deemed guilty of perjury, and on conviction incur the pains and penalties of that offense."

Yours very truly,

J. FRASER LYON,
Attorney-General.

Columbia, S. C., Sept. 16, 1911.

Mr. B. J. Rhame, State Bank Examiner, Spartanburg, S. C.

Dear Sir: Your letter to the Attorney-General in regard to the report which banks are required to make has been received. The law requires a bank to make a full report of all its property and liabilities and further requires that this report shall be in such form as you shall direct. I think you have authority to compel the bank to report all its undivided profits whether they are kept on the individual ledger or on the proper book for this purpose. If the bank refuses to do this, it is liable to the penalty prescribed by the statutes. I would suggest that in making your report to the State Treasurer that you name the banks which keep their accounts of undivided profits in the manner spoken of in your letter.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Columbia, S. C., Sept. 16, 1911.

Mr. B. J. Rhame, State Bank Examiner, Spartanburg, S. C.

Dear Sir: Your letter to the Attorney-General in regard to certain notes transferred by the Bank of Ninety-Six to the Norwood National Bank of Greenville has been received and turned over to me for reply. It appears to me from the letters enclosed with your letter that the Norwood National Bank took these notes on the strength of the guarantee given by the Bank of Ninety-Six. If the Norwood National Bank had taken these notes simply on endorsement without recourse, there would

have been no liability on the part of the Bank of Ninety-Six, but I am of the opinion that the separate guarantee by the Bank of Ninety-Six to see that these notes are paid at maturity, creates at least a contingent liability against this bank.

Yours very truly,

M. P. DeBRUHL,
Assistant Attorney-General.

Railroad Commissioners.

April 22, 1911.

Mr. T. B. Lumpkin, Secretary Railroad Commission, Columbia, S. C.

Dear Sir: Replying to your letter of the 19th inst., in reference to requiring the Seaboard Air Line Railway to stop its train No. 84 at Kollock, S. C., beg to advise that I have not read all of the correspondence you sent me in reference to this matter. I understand that train No. 84 is an interstate passenger train, and the question upon which you desire an opinion is whether the Railroad Commission of this State has authority to require this train to stop at Kollock.

In the case of Atlantic Coast Line Railroad Co. vs. Wharton, 207 U. S., 329, the court said: "When, therefore, an order made under State authority to stop an interstate train is assailed because of its repugnancy to the interstate commerce clause, the question whether such order is void as a direct regulation of such commerce may be tested by considering the nature of the order, the character of the interstate commerce train to which it applies, and its necessary and direct effect upon the operation of such train. But the effect of the order as a direct regulation of interstate commerce may also be tested by considering the adequacy of the local facilities existing at the station or stations at which the interstate commerce train has been commanded to stop. True, inherently considered, whether there be adequate local facilities is not a Federal question, but in so far as the existence of such adequate local facilities is involved in the determination of the Federal question of whether the order concerning an interstate train does or does not directly regulate interstate commerce, that question for such purpose is open and may be considered by us. 203 U. S. supra."

"Without stopping to consider whether, in view of the character of the trains to which the order before us related, it would

not result that the order complained of was a direct regulation of interstate commerce, and testing the subject by the local facilities at the station at which the trains were ordered to stop, we think the railroad company in this case has furnished such reasonable accommodations to the people at Latta as it can be fairly and properly called upon to give, and the order to stop these trains is, therefore, not a valid one."

"The term 'adequate or reasonable facilities' is not in its nature capable of exact definition. It is a relative expression, and has to be considered as calling for such facilities as might be fairly demanded, regard being had, among other things, to the size of the place, the extent of the demand for transportation, the cost of furnishing the additional accommodations asked for, and to all other facts which would have a bearing upon the question of convenience and cost."

The above rule as laid down by the Supreme Court of the United States should be followed by you in determining whether or not you should require train No. 84 to stop at Kollock.

Yours very truly,

J. FRASER LYON,
Attorney-General.

April 27, 1911.

Mr. T. B. Lumpkin, Secretary, Railroad Commission, Columbia, S. C.

Dear Sir: Your letter of the 26th inst., is at hand. It is unnecessary for me to examine the files in the matter of stopping train No. 84, Seaboard Air Line, at Kollock, S. C. The question you propound is solely a proposition of law and the case which I cited you lays down the rule by which you may proceed. You conclude your letter by asking whether or not the Commission would be justified in issuing an order requiring the S. A. L. Railway to stop its train No. 84, an interstate train, at Kollock, if, in the judgment of the Commission, the facts justify the same. In answer thereto, I will state, in accordance with the opinion of the Supreme Court of the United States, which I have already sent you, that if the facts justify it, the Commission has the power to pass an order requiring train No. 84 to stop at Kollock. Of course if such order should be passed,

it should not be done capriciously or arbitrarily, but should be based upon the actual necessities of the situation.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Board of Medical Examiners.

Jan. 31, 1911.

Dr. A. Earle Boozer, Columbia, S. C.

Dear Sir: Your letter in regard to the registration of trained nurses and enclosing a letter from Miss Davis, superintendent, has been received.

Section 2 of the Act to provide for the examination and registration of trained nurses, approved February 23rd, 1910, makes graduation from a training school connected with a general hospital where at least two years' continuous residence training with a systematic course is given necessary to registration. Section 3 does not in any way change the requirements of section 2, except as to those nurses who had graduated prior to January 1st, 1911. I do not think those persons mentioned in the letter referred to above, who have not graduated, are entitled to registration as trained nurses. The Act does not provide that nurses who have attended a training school two years shall be entitled to register, but prescribes that they shall be graduates of a training school where at least a two years' course is required. If parties attend a school requiring a three years' course, they must complete the course before they have the right to register.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

July 29, 1911.

Dr. A. Earle Boozer, Secretary, Columbia, S. C.

Dear Sir: Replying to your letter of the 21st inst., as well as confirming the opinion given you upon the matters we discussed personally, I beg to advise that it is my opinion: That graduates of a training school, which issues its diplomas to those who have not completed a two years' course at the time the diploma is issued, are not entitled to the benefits of the Act of 1910 governing the registration of nurses.

If a two years' continuous residence training course is prescribed by the training school and two years have elapsed from the date of entrance to the date of graduation and a diploma has been issued, the party is entitled to the benefit of the Act, other requirements being complied with, notwithstanding a part of the time prescribed may have been lost through sickness or other unavoidable causes.

If a course of more than two years is prescribed by the training school the courses so prescribed must be continued and the applicant for registration must have graduated before the benefits of the Act may be had.

If a person who has not attained the required age desires registration as a nurse such person may be examined at the last examination held before the required age is attained, such person being nearer 21 than 20 years of age, provided registration be not granted until the full age is attained.

Yours very truly,

J. FRASER LYON,
Attorney-General.

State Board of Health: Powers, etc.

July 22, 1911.

Dr. Robert Wilson, Chairman Executive Committee, State Board of Health, Columbia, S. C.

Dear Sir: Replying to the request of your committee for an opinion as to whether you have power to require the Board of Directors of the penitentiary to abolish the hosiery mill, located within the prison walls, because your committee has reached the conclusion that the convicts employed therein could be employed in a manner which would be more conducive to health, will advise:

It is my opinion that your Board does not possess the power to regulate or interfere with the employment of convicts in the penitentiary, and that you have not authority to compel the destruction or alteration of the buildings within the prison walls. Section 1085, Code 1902, provides that your Board shall be the sole advisor of the State in all questions involving the protection of the public health within its limits, and section 1088 imposes upon you the duty to make inspections annually, or oftener if necessary, of the sanitary condition of all institu-

tions, provided as State charities or supported at the public expense, but nowhere does the statute give you authority to compel the Board of Directors or superintendent of the State penitentiary to change the employment of convicts or to alter or destroy the buildings within the prison walls.

Section 662, Criminal Code, 1902, provides for a board of directors of the penitentiary, and among other powers and duties this board is given general supervision of the penitentiary, its inmates, property, etc., and are to make such general regulations for the government and discipline of the prison or modify such regulations as may have been made by the superintendent, and to inquire and examine into the sentence under which the convicts in the prison are confined, and also into conditions, physical or otherwise, of the convicts so undergoing such sentences. In section 666, Criminal Code, it is provided that it shall be the duty of the superintendent of the penitentiary to make and establish all such regulations for the due management of the concerns of the penitentiary, and for the government and security of the prisoners therein as may be necessary and proper, subject to revision by the directors. To make all necessary repairs of the prison and superintend the construction of the work, to take the charge and custody of the buildings, furnishings, tools, implements, stock, provisions and every species of property pertaining to the prison belonging to the State, and to appoint a physician for the prison. By reference to sections 662 and 666, Criminal Code, the powers and duties of the board of directors and superintendent of the penitentiary will more fully appear. It appears from the statutes, to which reference is made, that your board is required solely to inspect and advise and that the directors and superintendent of the penitentiary are required to consider and in the exercise of their judgment adopt such recommendation of the board of health as to them may seem proper.

It is my opinion that the concurrent resolution (Acts 1911, p. 445), requiring your board to make investigation of the sanitary condition of the penitentiary and authorizing you to take such steps as may be deemed necessary to prevent the spread of tuberculosis among the convicts, does not have the effect of diminishing the powers and duties of the superintendent and board of directors of the penitentiary. Even if this resolution, in direct terms, undertook to give you power to take upon your-

self some or all of the duties and responsibilities imposed upon the directors and superintendent of the penitentiary, the effect in law would not be so, for the reason that a concurrent resolution, passed without the constitutional formalities required in the case of an Act, will not, in case of conflict, override or nullify a statute duly and formally enacted. In the case of *State vs. Farnum*, 73 S. C., 171, it is said that "It is very true that neither reports nor resolutions have the power of an Act, their whole office and legal effect is as a formula for acts, or directory to the officers or agents of the State." So in this case the concurrent resolution, while of sufficient authority to require your board to make the inspection and investigation therein required, and the penitentiary authorities to submit thereto, it cannot have the effect of giving your board the right to prescribe the manner or nature of employment of the convicts, or to devolve upon you any of the duties imposed by statute upon the board of directors or superintendent of the penitentiary.

I think the above opinion covers the matters discussed at the meeting of your committee on the 19th. If not I will be pleased to advise you upon any matter which may have been overlooked.

Yours very truly,

J. FRASER LYON,
Attorney-General.

State Treasurer.

June 9, 1911.

Hon. R. H. Jennings, State Treasurer, Columbia, S. C.

Dear Sir: Responding to your letter of the 8th inst., beg to advise that it is my opinion that you should not countersign checks for the disposition of funds arising from the assets of the former State Dispensary or from the debts due said dispensary without a certificate, provided for in section 12 of an Act of 1908, page 1293. The State Dispensary Commission should, in my opinion, follow the provisions of the above mentioned Act, and if they certify to any of the facts stated in this section which allows you to countersign a check, you should thereupon countersign the same.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Public Roads: Commutation Tax, etc.

Columbia, S. C., Sept. 16, 1911.

Mr. R. M. Daley, Scotia, S. C.

Dear Sir: Your letter to the Attorney-General in regard to the law regulating the working of roads and payment of commutation tax in your County has been received. The Act of 1911 provides for the collection of a tax for the working of roads for the year 1912 and the years following. I think those who have failed to pay their tax, or to work the roads for the year 1911 are liable to prosecution under the law as it stood prior to the Act of the last Legislature. The Act of 1911, so far as it relates to the collection of road tax, does not become effective until time for collecting taxes this fall, and the tax to be collected under it is for the year 1912.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Nov. 9, 1911.

Mr. W. S. B. Tate, St. Paul, S. C.

Dear Sir: Yours of the 8th inst. is at hand. It is my opinion that persons liable to road duty must perform the service or pay the tax in the County of their residence. If they have paid the tax in some other County it will not relieve them from paying it in the County required by law. When the tax has been paid in the County where the taxpayer resides, he cannot be compelled to pay it in some other County.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Nov. 13, 1911.

Mr. M. F. Mosley, Bethune, S. C.

Dear Sir: The Act of 1911 providing for commutation road tax in Kershaw County requires that all able-bodied male persons between the age of 21 and 55 shall be liable to road duty, but in lieu thereof may pay a tax of \$2. It is my opinion that the Legislature has authority to extend the age limit for performance of this duty at will, and the fact that you have been exempt for three years heretofore could not affect the authority of the Legislature, in now requiring the tax of you. Of course

these are all matters to be disposed of by your legislative delegation.

Yours very truly,
J. FRASER LYON,
Attorney-General.

Taxation.

June 10, 1911.

Hon. A. W. Jones, Comptroller-General, Columbia, S. C.

Dear Sir: In reply to your request for an opinion as to whether the property mentioned in a decree of the Court of Common Pleas, in the case of Lowman vs. Lowman et al., is exempt from taxation, I beg to say that I do not think this property is exempt from taxation at the present time. If, in the future, such use is made of the property as will entitle it or any part of it to exemption from taxation, the owners can then make claim for such exemption as the law may allow.

Yours very truly,
M. P. DEBRUHL,
Assistant Attorney-General.

June 14, 1911.

Mr. Legare Walker, Summerville, S. C.

Dear Sir: Your letter to the Attorney-General of May 18th, enclosing a letter in regard to the State's lien for tax, has been handed to me for reply. The question in controversy was settled by the Act of the Legislature approved February 18th, 1911, Acts of 1911, page 229. By this Act all taxes heretofore or hereafter levied or becoming due under the laws of this State are conclusively presumed to be paid after ten years from the last date said taxes could have been paid without penalty.

Yours very truly,
M. P. DEBRUHL,
Assistant Attorney-General.

June 30, 1911.

Hon. A. W. Jones, Comptroller-General, Columbia, S. C.

Dear Sir: Your letter enclosing a letter from Mr. T. L. Hilton, County Treasurer of Lancaster, in regard to the taxes due by the Haile Gold Mining Company, has been received. I note that Mr. Hilton says the order of the court directs that the

receiver pay out of the proceeds of the property all taxes for the years 1910 and 1911. I do not think Mr. Hilton can accept the taxes for 1911 and give a receipt as treasurer for the same at this time. He may accept these taxes as a deposit to be applied when the taxes are due and payable and give a receipt to that effect. I do not suppose the receiver will object to paying the money in this way.

I return herewith the letter of Mr. Hilton.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Nov. 9, 1911.

Hon. A. W. Jones, Comptroller-General, Columbia, S. C.

Dear Sir: Replying to the inquiry of Auditor Wise transmitted through your office as to whether the auditor is authorized to apportion taxes after the same goes into execution, or has the Comptroller-General the right to adjudicate this matter, I would say, that it is my opinion that section 399 of the Code provides for an apportionment of taxes on lands transferred after return, but before time of payment of taxes. Section 407 provides that a mortgagee may pay a tax and include the same in the mortgage debt at any time before the sale of the property for delinquent taxes, but taxes upon all the property of the mortgagor, with any costs, penalties, or assessments which have accrued thereon, must be paid. There is no provision for apportionment of taxes between the mortgagor and mortgagee. The two sections above referred to will be more fully understood by reference thereto.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Fertilizer Tax: Interstate Shipments, etc.

July 8, 1911.

Mr. H. M. Stackhouse, Clemson College, S. C.

Dear Sir: On June 20th I received from Mr. Bethea a letter enclosing copies of correspondence between you and Mr. J. W. Perrin, general freight agent of the Atlantic Coast Line Railroad, and asking that an opinion be given you on the question discussed in that correspondence. Your letter would have been

answered sooner, but I was simply overrun with work, and Mr. Lyon was absent. I see from your letter to Mr. Perrin that your board has ruled that it is "a violation of the law for fertilizer to be shipped in bulk, except to fertilizer factories on conditions shippers notify office of secretary of fertilizer board of the amount and date of shipment and also show in the bill of lading that goods are consigned to fertilizer factories for manufacturing purposes." The question upon which the opinion is asked is whether this ruling can be applied to interstate shipments. After looking into the authorities, as far as I have had time to do, I am inclined to think that this regulation is a reasonable one and that it may be enforced as to both interstate and intrastate shipments. I note that you say in your letter to Mr. Perrin that the board of fertilizer control will meet on the 12th of June, and that his inquiry will be submitted for their consideration and that you will notify him of their decision. The inquiry sent to this office did not come until sometime after the date when your board was to meet. I do not know what action they took, or whether the matter was acted upon or not. I notice that you say to Mr. Perrin that his inquiry of May 20th, which I take to be the letter of which a copy was furnished this office, had been referred to the Attorney-General for an opinion and that no answer had been received from him at the date of your letter, which was June 8th. No such request for an opinion has been received at this office until the correspondence referred to was sent here by Mr. Bethea.

Yours very truly,

M. P. DeBRUHL,
Assistant Attorney-General.

Marriage Licenses.

May 8, 1911.

Mr. W. Albert Parrott, Clerk of Court, Darlington, S. C.

Dear Sir: Your letter of May 4th asking what would be a sufficient record of a marriage license has been received. I understand the Act to require that the license, together with the certificate of the minister or officer performing the ceremony, must be recorded in full. A mere indexing after the manner stated in your letter will not be a record within the meaning of the

statute. I would have replied to your letter sooner, but had to look up the Act. The printed Acts have not yet come out.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

May 10, 1911.

Mr. W. Albert Parrott, Clerk of Court, Darlington, S. C.

Dear Sir: Your letter of May 9th enclosing form of marriage license, etc., has been received. You have, I believe, a copy of the Act. By reference to the second section of the Act you will see that the officer is directed to issue the license upon the payment of a fee of \$1 and a statement under oath that the parties are legally capacitated to contract marriage, etc. The Act does not say who shall sign this statement under oath. The statement must be signed by the persons who know the facts. If one of the parties knows all the facts of his or her own knowledge this would probably be sufficient, or if the facts are sworn to by the parents, I think that would be sufficient. My opinion is that the Legislature simply intended to provide against the officer being deceived as to the capacity of the parties to contract marriage and to furnish him the means of knowing that the parties were of lawful age, as prescribed in the Act, and not otherwise prevented from making a lawful marriage.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

July 12, 1911.

S. H. Rodgers, Esq., Clerk of Court, Beaufort, S. C.

Dear Sir: Your letter of the 10th inst., asking if the affidavit required before issuing a license to marry may be taken before a notary public and then be sent to the clerk of court and the license issued upon such affidavit, is at hand.

In response will say that it is my opinion that the statement under oath or affirmation, required in section 2 of the Act, may be made by any person having knowledge of the facts, before a notary, and that such statement, under oath or affirmation, is sufficient to authorize the clerk of court or probate judge, as the case may be, to issue the marriage license. It is not necessary, under the terms of this Act, that either of the contracting parties

appear before the officer who issues the license, but the license may be issued upon presentation of the statement under oath or affirmation as above indicated.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Columbia, S. C., Sept. 18, 1911.

Mr. J. J. Burnett, Probate Judge, Spartanburg, S. C.

Dear Sir: Your letter to the Attorney-General asking for an opinion under the Act providing for a marriage license has been received. The Act provides, as you state, that no license shall be issued where the woman is under the age of fourteen years or the man is under the age of eighteen years, and then provides further that when either party to the proposed marriage is under eighteen years of age, and resides with the father or mother, etc., no license shall be issued until the consent of such guardian is obtained. I think this should be construed that no license shall be issued in any case where the woman is under fourteen years old, or where she is under eighteen unless consented to by her parents or guardian; that no license shall be issued where the man is under eighteen, except upon the consent of the parents or guardian.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Columbia, S. C., Sept. 21, 1911.

Judge Milton McLaurin, Bennettsville, S. C.

Dear Judge: Your letter of the 20th inst. is at hand. The father of the girl contemplating marriage having, as you state, made an affidavit that she is only 16 years old, and having objected to the marriage, I think it proper for you, notwithstanding the fact that the girl has sworn she is 23 years old, to refuse to issue the license. If the girl is really 23 years old, she should be able to establish it in some proper proceeding instituted for that purpose. I advise that under the circum-

stances you adhere to the decision which you have already reached.

I am pleased to serve you whenever I can.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Town Councils: Powers, etc.

April 15, 1911.

Dr. E. C. Addison, Fairfax, S. C.

Dear Sir: Your letter of the 12th inst. is at hand. In my opinion it is within the power of the town council to pass ordinances providing for the prevention of obstructions of the streets and highways of the municipality, and also to regulate or prevent the erection of scales or other such things in the public streets. I think it would also be competent to pass ordinances regulating the posting of signs, etc.

Yours very truly,

J. FRASER LYON,
Attorney-General.

June 27, 1911.

Mr. George E. DuBose, Bishopville, S. C.

Dear Sir: Your letter of the 26th inst. has been received. The mayor of your town has not the authority to require a person giving bond for appearance either before the council to answer charges against him, or on appeal to the circuit court, to put up money in lieu of other security. The law provides that any person who is required to give a bond for his reappearance at court may deposit the amount of the bond in money, if he so desires, but as I understand the matter, this is a privilege granted to the prisoner and does not give the court the right to require that he shall deposit cash in lieu of other securities.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Columbia, S. C., Sept. 21, 1911.

Mr. Walter S. Utsey, St. George, S. C.

Dear Sir: Your letter in regard to the Act entitled "An Act to Regulate the Buying and Selling of Cotton in Bales and

Cotton Seed" has been received. The provision that no license tax shall be collected by any city or town from any person or persons engaged in buying or selling cotton in bales or cotton seed includes corporations and partnerships as well as individuals.

Yours very truly,
M. P. DeBRUHL,
Assistant Attorney-General.

Alcoholic Liquors: Licenses.

May 8, 1911.

Mr. E. R. Burroughs, 1006 Mich. Ave., Chicago, Ill.

Dear Sir: Your letter to the Attorney-General asking that he advise you if you can sell by personal solicitation directly to the consumer in this State, without paying a license, has been received. You do not state what you wish to sell. If you are traveling for an established mercantile house and selling ordinary merchandise by sample, no license is required in this State. If you are delivering the goods you sell at the time of sale, you will be subject to such license as the various towns and cities may enforce. It is unlawful for any person to sell alcoholic liquors in this State. Soliciting orders for the sale of such liquors is prohibited by statute under a penalty of \$1,000, or imprisonment for six months, or both.

Yours very truly,
M. P. DeBRUHL,
Assistant Attorney-General.

June 27, 1911.

Mr. O. L. Winstead, Winston-Salem, N. C.

Dear Sir: Your letter of June 25th to the Governor has been referred to this office for reply. Any person in this State can send an order to a liquor dealer outside of the State for liquor to be shipped to the person making the order for personal use. No person can solicit orders for liquor in this State, or take such orders in person and receive the money for the goods, either before or after the goods have been shipped. No license can be granted to any person or firm to send an agent into this State

for the purpose of selling alcoholic liquors or soliciting orders for such liquors.

Yours very truly,
M. P. DeBRUHL,
Assistant Attorney-General.

July 12, 1911.

Mr. L. I. Brown, 315 Endel St., Greenville, S. C.

Dear Sir: Your letter of the 5th inst. is at hand. I quote you the language of the case of the State vs. Green, filed in the office of the Clerk of Supreme Court, July, 1911: "The court also erred in charging that it was unlawful for one to have liquor in his possession in a prohibition County, no matter what quantity or for what purpose. State vs. Rookard, 87 S. C., 442."

It is, therefore, my opinion that one is allowed to have liquor in his possession for his own personal use, and if he is not using it for some unlawful purpose he is committing no offense under the laws of this State.

Yours very truly,
J. FRASER LYON,
Attorney-General.

Oct 2, 1911.

Mr. B. F. Loadholt, Fairfax, S. C.

Dear Sir: Your letter of the 30th ult. is at hand. It is my opinion that a person residing in this State may have liquors shipped to him from another State for his own personal use, and that it may not be lawfully interfered with by the officers of this State. I do not think a town council had authority to pass an ordinance preventing a resident of this State from so doing. I do not think it unlawful for a person to give another a drink, if such is purely gratuitous. I do not think it unlawful for a person to give another an intoxicating drink for the purpose of inducing trade, the performance of labor, or for any other valuable consideration. While the above is my opinion, I have no authority to enforce that opinion upon any officer of the State who desires to act contrary thereto. I simply state to you my opinion in the matter.

Yours very truly,
J. FRASER LYON,
Attorney-General.

Oct. 13, 1911.

Mr. M. M. Mann, St. Matthews, S. C.

Dear Sir: Your letter of the 12th inst. is at hand. It is my opinion that the Act of 1911 exempting persons engaged in the business of buying or selling cotton in bales or cotton seed in any such city or town exempts all persons whomsoever engaged in such business whether they patrol the different sections of the town, or whether they have a place of business in town, whether they buy seed for speculation, or otherwise. I do not think the Act bears any other construction.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Game Laws.

July 7, 1911.

Hon. W. C. Irby, Laurens, S. C.

Dear Sir: Your letter to the Attorney-General asking for an opinion in regard to the catching of fish, as provided for in the Act approved February 18th, 1911, was received after the date on which you stated you desired to have the opinion. Section 2 of the Act referred to provides that no person shall catch fish in the waters of this State with any appliances of any kind except hook and line with ordinary bait, or by spoons or artificial fly or phantom minnow, or by artificial bait, between the first day of April and the first day of November of each year. I think this Act prohibits the catching of fish by any appliance except those specially allowed. There is nothing in the Act of 1911, or the Act of 1910, which it amends, to indicate that the Act was intended merely as a local Act to certain Counties. I do not think the Act can be construed as preventing any person from catching fish with his hands, unless he uses some forbidden appliance to enable him to catch them in this manner. Section 7 of the Act of 1910 provides that any migratory fish, except game fish, may be caught at any time and in any manner not prohibited by this Act. Section 1 of the Act names the fish which are to be known as game fish.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

South Carolina Industrial School.

June 9, 1911.

Messrs. McFarlan & Thornwell, Darlington, S. C.

Gentlemen: The Attorney-General has requested me to reply to your letter of June 8th in regard to charges made by the trustees of the Industrial School against your County for support of a boy committed by the probate judge of Florence County. The statute provides that for the maintenance of this school there shall be paid to the board of trustees by each County from which boys may be sent thereto such a sum per capita as shall be found by the trustees to be necessary for the maintenance of the school. We agree with you that the boy in question having been sent to the institution from Florence County, that County, and not Darlington, is liable for such charges as may be legally made for his support.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Bonds of Public Officers.

March 4, 1911.

Mr. John W. Linley, Anderson, S. C.

Dear Sir: Your letter in regard to the bond of Mr. W. P. Nicholson, probate judge, was received this morning. Mr. Nicholson is now holding over under his former appointment and has been since the date when the term expired in December last. The fact that it is over 30 days from his appointment before his new bond is filed and his commission issued will not affect his right to hold office. The law provides that an officer shall qualify and get his bond and commission within 30 days from the time of his appointment, and if he does not do so, a vacancy may be declared and the Governor may fill the place. I do not suppose there is any danger, however, of this being done. The best way out of the difficulty is for Mr. Nicholson to make his new bond at once, and forward here for approval. This office could not consent to a power of attorney being dated back to cover the time when no such power existed.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Constitution: Drainage, etc.

July 26, 1911.

Hon. Geo. F. Von Kolnitz, Attorney at Law, Charleston, S. C.

Dear Sir: Your letter of the 19th urging various objections to the Drainage Act is at hand, and has had my careful consideration.

In order that you may be advised of my opinion without undue repetition the constitutional points suggested by you will be grouped under three heads. I take the view that these objections are susceptible of such grouping, when the points involved are considered in the light of the authorities which I quote.

The objections are that the Act is unconstitutional: 1. In that the assessments to be made upon the lands benefited are taxed, and the manner and mode prescribed for levying the same violate article 1, section 6; article 3, section 29; article 8, section 3, and article 11, section 13, of the Constitution of South Carolina.

2. That the statute denies persons, held for the payment of assessments, due process of law and the equal protection of the law.

3. The drainage districts are quasi municipal corporations, and as such are prohibited from levying taxes and issuing bonds under the provisions of article 8, section 3, and article 10, section 6, of the Constitution of this State.

The other objections which you wish to urge, as I gather from your letter, are that the Act is fatally defective in that it is not provided what the summons, provided for in section 2, shall contain, how it shall be served and how the costs of the proceedings shall be paid.

It is my opinion that the provisions of the constitution restricting the Legislature as to levying and assessing taxes has no application to levying assessments against land-owners receiving benefits from a drainage system inaugurated under the Act of 1911. Article 1 of amendments to the constitution of this State provides for condemnation of swamp and low-lands for drainage and for the equitable assessment of all lands so drained for the purpose of paying the expenses of such condemnation and drainage. By providing for an equitable assessment the constitution has put it in the power of the Legislature, if it did not theretofore possess such power, to impose the burden of the enterprise upon those affected, in proportion to the

benefits received. This the Act has undertaken to do. If there is any conflict between article 1 of the amendments and the other provisions of the Constitution, which have been cited, and which relate to taxation, and I think there is none, the amendment will prevail, having been adopted at a later date.

The contention that the Act denies persons, involuntarily held for the payment of assessments, due process of law, and the equal protection of the law, cannot, in my opinion, be sustained. The Act applies alike to all persons within the drainage district, and it is provided that all who oppose the enterprise shall have the right to a hearing of their contentions, and the right of appeal to the circuit court in the event of an adverse decision. Act 1911, sections 2 and 8. The fact that the County Auditor has no part in fixing the assessment cannot affect the matter, for the reason that the constitution does not restrict the Legislature in this respect, but leaves it free to provide such procedure as may be just and proper. On this point it is said, in *Cooley on Taxation*, page 71, that "the Fourteenth Amendment is not violated by the State law providing for the drainage and for the assessment of the costs thereof upon all lot owners of any tract of low or marsh land on proceedings instituted by five or more owners of lots within the tract, and not objected to by owners of the greater part of the tract, all being given an opportunity for a hearing."

"As the statute is applicable to all lands of the same kind, and as no person can be assessed under it for the expense of drainage without notice and opportunity to be heard, the plaintiffs in error have neither been denied the equal protection of the laws, nor been deprived of their property without due process of law, within the meaning of the Fourteenth Amendment of the Constitution of the United States. *Barbier vs. Connolly*, 113 U. S., 27, 31 (Bk. 28, L. ed. 923, 924); *Walker vs. Sauvinet*, 92 U. S., 90 (Bk. 23 L. ed., 678); *Davidson vs. New Orleans*, 96 U. S., 97 (Bk. 24, L. ed., 616); *Hagar vs. Reclamation District*, 111 U. S., 701 (Bk. 28, L. ed., 596)." *Wurts vs. Hoagland*, 29 Law. Ed., page 232.

The contention that the Act contravenes article 8, section 3, and article 10, section 6 of the Constitution of South Carolina, is not, in my opinion, well founded. I am unable to perceive how any part of either of these provisions apply to or affect the matters referred to in the drainage Act, but if such should

be the case article 1 of Amendments of the Constitution gives the specific right to provide for drainage and to pay the costs thereof by an equitable assessment of the party benefited, and, as has been hereinabove suggested, this amendment controls as to the matters therein contained.

It is also urged that the Act is fatally defective in that it is not provided what the summons shall contain, how it shall be served and how the costs shall be paid. Section 2 of the Act provides that the clerk of court shall issue a summons to be served on all the land-owners who have not joined in the petition, and whose lands are included in the proposed drainage district, and that the law and rules of the Civil Code shall be applicable to this Act as far as may be practical. Under this provision at least twenty days should elapse from the service of the summons to the return day, and the summons should advise the party defendant at reasonable length the nature and purpose of the proceeding, describing the area to be drained and especially the purpose of levying an assessment against his lands, and to issue bonds to raise money to defray the expense of draining the proposed district. The summons may be served in the manner prescribed in the Code of Civil Procedure for the service of summons in civil actions. In section 16 it is provided, "If, however, the clerk finds that the cost of construction, together with the damages assessed, is greater than the resulting benefit that will accrue to the lands affected, the clerk shall dismiss the proceedings at the cost of the petitioners, and the sureties upon the bond so filed by them shall be liable for such costs. The clerk of court may from time to time collect from the petitioners such amounts as may be necessary to pay costs accruing other than the costs of the engineer and his assistants, such amounts to be repaid from the special tax hereby authorized." It is urged that the failure of the Act to make provision for the bond referred to in this section leaves no provision for the payment of costs. The contrary appears to be the case from the above quotation. The petitioners are liable, and may be compelled, to pay the same. The bond would be only additional security.

In view of the above I advise that the clerk of court issue the summons provided in section 2 of the Act, and that it be made out along the lines suggested in this opinion.

Yours very truly,

J. FRASER LYON,
Attorney-General.

Catawba Indians.

June 7, 1911.

Hon. W. H. Stewart, Rock Hill, S. C.

Dear Sir: Your letter of the 3rd inst., asking me for the return of papers relating to the Catawba Indians which you left with me some time ago has been received. I gave them to Mr. J. S. Brice of your city yesterday, who kindly consented to take them to you.

I am still of the opinion that it will be best for the State to divide the lands on which the Catawbas now reside, and such additional land as may be necessary among them, and after making such provision as may be necessary to start them off on their own responsibility to allow them to work out their own destiny and cease giving them a pension every year.

Yours very truly,

M. P. DEBRUHL,
Assistant Attorney-General.

Miscellaneous.

May 9, 1911.

Mr. R. W. Clark, Bozeman, Mont.

Dear Sir: Your letter to the Attorney-General asking if he can refer you to any cases where an Act of the Legislature had become law where the Governor had refused to sign the Act after adjournment of the Legislature and had then afterwards recalled it from the Secretary of State and approved it, has been received. Our Constitution requires that when an Act of the Legislature is sent to the Governor while the Legislature is in session, it shall be approved by him or returned to the Legislature without approval within three days from the time he receives it. If the Legislature has adjourned before the expiration of the three days, he must either approve it, or must return it to the Legislature at its next session without his approval within two days from the time the Legislature meets. He may approve it at any time during the year when the Legislature is not in session, and upon such approval it becomes law. There are no decisions of our Supreme Court passing on this question during the present year. The Governor publicly announced that he declined to approve an Act and afterwards changed his

mind and approved it. There is no reason why this Act should not become law.

Yours very truly,

M. P. DeBRUHL,
Assistant Attorney-General.

Oct. 2, 1911.

Mr. H. McRae, Dillon, S. C.

Dear Sir: Your letter of the 22nd ult. is at hand, and would have been answered sooner but for the fact that I have been busy in court for some days past. Whether a person may be convicted who has given a check for labor which has already been performed, or goods received previous to giving check and the check has been turned down, depends upon the facts and circumstances of the case. I would say that if the creditor contemplated a suit to collect the money and desisted from bringing the suit, or taking advantage of any remedy he might have for collecting the debt by reason of the check being given for payment of such labor or goods, that such act renders one liable to prosecution, provided, of course, the check is not made good within the time prescribed by statute.

Yours very truly,

J. FRASER LYON,
Attorney-General.

EIGHTH ANNUAL REPORT

OF THE

**Commissioner of Agriculture,
Commerce and Industries**

OF THE

State of South Carolina

1911

LETTER OF TRANSMITTAL

To His Excellency, the Hon. Coleman L. Blease, Governor of South Carolina.

Sir: In accordance with the provisions of Section 5 of "An Act to establish a Department of Agriculture, Commerce and Immigration, and to provide for the appointment and compensation of a Commissioner," approved the 22d day of February, A. D. 1904, and an Act approved the 4th day of March, A. D. 1909, amendatory thereto, I have the honor herewith to hand you my eighth annual report, covering the work of the Department under this Act, exclusive of the work of the Labor Division, for which a separate report is required by law and has been filed, for the year 1911, for transmission to the General Assembly, in accordance with the provisions of the section of the Act aforesaid.

Respectfully,

E. J. WATSON,
Commissioner.

ANNUAL REPORT.

GENERAL.

South Carolina, as this report is presented, has reached the highest point yet attained in her history in agricultural and industrial development. This point has been reached in so short a space of time as to seem almost incredible. This Department was created by the General Assembly less than eight years ago, at a time when agriculture was languishing, when the farm lands were being turned over to the tender mercies of ignorant negro tenants and the movement from farms to centers of population was in full sway, when farm life had ceased to be attractive, and when the annual agricultural production was only \$51,324,000.

The great change during the period that has just elapsed is best represented by the annual agricultural production in chief crops only, of 1909—\$100,010,000, and of 1910—\$140,009,000, this last figure representing an increase in the decade of 173 per cent. The 1909-10 census gave the grand total value of all agricultural products, omitting, however, the State's trucking industry, worth annually about six million dollars, and all live stock as \$144,397,319, a still more astounding increase. The comparative figures of the United States Bureau of Statistics, issued in May, 1911, for the years 1909 and 1910, for all the States, covering cotton, corn, wheat, oats, barley, rye, buckwheat, flax seed, rice, potatoes (not sweet), hay and tobacco, revealed, in some measure, the glory and premiership that the Palmetto State has won in National competition. Already this little triangular wedge of 30,000 square miles on the Atlantic coast had taken second place in textile manufacturing in the Nation, and now, always a leader, she forges ahead in a more important and fundamental branch of industry and takes the lead of all the States in the Union, with the exception of Wyoming and Nevada, which respectively rank forty-third and forty-fourth in volume of production, and are new States in agriculture, and, therefore, are not worthy of consideration, in the percentage of increase in agricultural production between 1909 and 1910. She further takes rank of second among all the older producing States in the Union in the percentage of increase in agricultural products in the decade between 1900 and 1910. She

still further, in volume of production, outranks every Southern State, except Texas and Georgia, and in value per square mile of territory she outranks both of those States, her value being \$4,518.00 against \$1,369.00 for Texas and \$3,373.00 for Georgia. Among all of the ranking States of the Union, South Carolina's value per square mile is next only to Illinois, with \$5,122.00, and Indiana with \$4,736.00. The little Palmetto State easily outranks Iowa, Ohio, Pennsylvania, and all the other large producing States in this regard. None of the other Southern States, except Georgia, come up to the \$3,000.00 mark, and the value in one, at least, is as low as \$257.00.

Looking at the matter in dollars and cents, South Carolina's increase of 28.4 per cent. in value of farm products in the year 1910 represents, in round numbers, \$31,000,000. Georgia's total increase, notwithstanding her almost double territory, was \$34,015,000 for the year. Going back a decade, South Carolina's increase in value of agricultural products of 173 per cent. means, in cold cash, an increase over 1900, when the value was \$51,324,000, of \$88,685,000, and an increase over 1906 of \$63,288,000. It should be borne in mind, too, that up to about 1906 no real material advance had been made during the decade, and, as indicated by the figures for the year 1910, the real advance has been made in the past few years. It should be borne in mind, too, that this great increase of \$31,000,000, in one year, has not been due to the high price of cotton, for in 1909 the average price per pound paid for cotton in South Carolina was 14.4, while in 1910 it was 14.6 cents.

The fact that a little State like South Carolina can jump from the rank of 21 in production among the States of the Union in one year's time to the rank of 13, and be one of only three Southern States standing in the list between 1 and 13, and those other two Southern States having an area of 265,896 and 56,265 square miles, respectively, against her 30,989 square miles, shows that effective work has been done somewhere, and yet the real agricultural development of the matchless resources of this State has but just begun.

It is a particularly striking fact that the Middle Western States, which have heretofore been the leading agricultural States in the Union, showed marked decreases in volume of production during the year 1910, while every Southern State, except Kentucky and Louisiana, show marked increases. Illi-

nois shows a decrease of 13.9 per cent.; Ohio, 8 per cent.; Indiana, 10.5 per cent.; Kansas, 17.2 per cent.; Nebraska, 19.7 per cent., bringing that State down from ninth in rank to twelfth; Michigan, 2.9 per cent.; Wisconsin, 9.8 per cent.; South Dakota, 15.2 per cent.; North Dakota, 58.6 per cent., and so on.

It is worthy of consideration, too, to note that the South Atlantic States show an increase of 17.1 per cent., the North Atlantic States an increase of 17.8 per cent., and the South Central States an increase of 8.2 per cent, while the North Central States, east of the Mississippi, show a decrease of 10 per cent., and the North Central States, west of the Mississippi, a decrease of 15.8 per cent., while the far Western States lag behind with a decrease of 6.4 per cent., leaving a net decrease for the year for the whole United States of 2.3 per cent. But for the wonderful advance in the South Atlantic States, with South Carolina, as is shown by the figures, leading, the net decrease in agricultural production of the country would perhaps have been a serious matter during the year 1911.

The Federal census also revealed wonderful progress in South Carolina. It showed that there were in 1910, 176,180 farms in the State, an increase of 13 per cent., that the value of farm lands and buildings had increased 162 per cent., that the value of farm implements and machinery had increased 112 per cent., that the value of farm lands alone had increased 169 per cent., that the value of lands and buildings, per acre, had increased 172 per cent., that the value per acre of farm lands alone had increased 179 per cent., and that the expenditures for farm labor had increased 76 per cent. It showed also that during the decade the State added 20,825 farms; that 64,227 persons owned their farms, 4,810 more owners than in 1900, and that only 14,987 farms in the State had mortgages upon them.

This marvelous progress in agriculture in our State has been brought about by the vigorous prosecution of an intelligent programme of progress, in which all agencies, making for the restoration of the foundation industry, have worked incessantly and in a spirit of fullest co-operation, harmony and unity of purpose for the common end. When I refer to agencies, I mean such agencies as the State's Agricultural College, the United States Farm Demonstration work, the State Experiment Station, the representatives of various bureaus of the Department of Agriculture in Washington, particularly the

Bureau of Plant Industry, the State Farmers' Union, the Rural School Improvement Association, the Rural School work, and both the daily and weekly press of the State. Incident to the systematic and continuous work of these agencies has been the tremendous influence of such events as the introduction of the Williamson corn method and such accomplishments with corn records as those of Mr. Tindal and of Jerry Moore. The State Department of Agriculture has done its best to convert all these agencies into one smooth-working machine and to keep the interest of the people aroused, ever pointing them to the gateway to get there. That all of this combination of working agencies, never stopping to waste time in bickerings and petty jealousies, has brought results measuring in the millions of dollars is best evidenced by the fact that the real progress did not begin further back than five or six years ago, and that when it was undertaken, but few of the agencies mentioned had raised their banners in the cause. Today throughout the length and breadth of the State a degree of interest in agricultural development is aroused that bodes for far greater development on agricultural lines in South Carolina during the current year than we have ever known before, and promises to have a marked influence upon like development throughout the South Atlantic States.

We now find the richest asset of any commonwealth or country—the indifferent farmer—thoroughly aroused at last to a full sense of his own potentiality, crying for more information, for a greater application of science for humanity's sake, and with his coat off, working to better the conditions of life in the rural districts of South Carolina, where 85.2 per cent. of our total population resides. And yet the surface has merely been scratched. We have so far simply tickled the face of our rare opportunities, and begun to realize the vast extent and variety of our material resources. Surely agriculture, the basic industry of all prosperity, has been rehabilitated.

When this Department was established there was not in existence a single sheet of South Carolina statistical literature. The people themselves knew nothing of their own condition. Today there is no more alert, knowledge-seeking agricultural population in all America.

CONSTRUCTIVE POLICY PURSUED.

The head of this Department was called to the service of the State from private life, without seeking the position. The first announcement made was that the work was to be launched and prosecuted upon a business basis, pure and simple, and that the constructive character of the work was such that it would be the aim and purpose to ever and always keep the Department clear of political entanglements. This policy has been adhered to from the first to last, rigidly. In succeeding State political campaigns issues were made and fought over repeatedly, in the General Assembly itself—based upon phases of the development work undertaken. No man from this Department has been permitted to raise his voice during any such contest. Trying have been some of the experiences, but the constructive policy has never been abandoned for a moment. The Department has, on the contrary, always endeavored to harmonize any differences and jealousies developing among the different agencies seeking the same end, and to keep all pulling together for a common purpose, and by reason of maintaining harmony and co-operation, all these forces have been enabled to bring the maximum of effort to bear on the successive steps of the development campaign. The result has been results, and results alone count. Efforts that end in failures, however admirable the efforts, never produce wealth and prosperity.

In presenting this report, it is but proper that due acknowledgment be made to the admirable spirit of co-operation that has been maintained by all these agencies, and has led to the present day conditions. This Department feels that its mission has been a genuine constructive one; that its non-political policy has been the correct one, and believes that the people of the State have experienced material benefits that have convinced them of its soundness and effectiveness.

SEEKING A SELF-SUSTAINING BASIS.

With departments of sister States, operating upon incomes running up to almost a quarter of a million dollars annually, it has been the policy of this Department to seek more far-reaching results at the minimum of cost, and as quickly as possible to put the Department upon a self-sustaining basis.

In direct appropriations, the largest amount charged to the Department was that of 1911, \$21,520, and \$18,000 of that was

not Departmental, being separate appropriations in support of the United States Farm Demonstration Work, and for corn-breeding work and exposition. From the Commercial Feed Stuffs Act sufficient revenue has been derived to establish and equip first-class permanent laboratories, pay all laboratory and inspection operating expenses and leave on deposit in the treasury at the end of the year 1911, a balance of \$5,489.92. The actual cost to the State, therefore, for the maintenance of the Department proper, not considering the permanent investments, has really been only \$2,530. The laboratory equipment alone is worth over \$3,000, and it is the property of the State. But these figures are more fully set forth in the body of this report. With the present surplus undistributed, this Department should and most probably will be not only self-sustaining this year, but a source of surplus revenue to the State as well.

It is to be doubted, indeed, if there is a Department, showing anything like the scope of work done, annually increasing and broadening, to be found in any of the States, operated upon so modest an expenditure. The policy of conservative business management, it is hoped, has been worth the painstaking efforts made for its successful execution.

All of the Department's work has been necessarily creative in character. There was no beaten path to follow. New and trying conditions have had to be met and faced and the organization shaped upon original lines. The object has been to concentrate effort upon one necessary step at a time until success was assured, and then proceed to the next logical step with the same degree of concentration. And so the few years have glided by, each bringing its results and its severe and oftentimes bitter and disheartening experiences and trials.

The Commissioner feels it due to you and the public to make clear the aims that have been sought and the policies pursued, as his term of intensely active service is approaching its close, for, under many trying conditions, he has ever remained silent and gone unflinching forward on the predetermined course of conservatism, patriotism and constructiveness.

CAMPAIGN FOR "SOMETHING TO EAT."

The past year, with the corn-growing campaign in full swing, bringing dollars and cents of its own resistless momentum, there has been supreme concentration upon the effort to induce the

people to raise something to eat at home, and cease the enormous expenditures made in other States for food for man and beast.

DRIVING OUT ROTTEN FEED STUFF.

Allied to this, and for the greater reason that human life was involved, the most effective enforcement of law, perhaps, ever attempted by any State, has been to drive out of South Carolina shipments of rotten corn, and more particularly corn meal. The State was indeed a dumping ground for dangerous material of this kind when the campaign was begun. Today the shippers dare only to send stuff they know to be pure.

THE FAR-RURAL DISTRICTS.

The effort has been made, too, to give the farmer the information he is now crying for continually, at first hand, and a campaign designed to penetrate the far-rural districts was conceived and put into execution with noteworthy success and far-reaching results.

Drainage reclamation, good roads and, indeed, all lines of possible development, looking to the fullest rehabilitation of the agricultural industry, have been pushed eagerly, earnestly and untiringly, and thousands of letters giving specific information upon agricultural problems within the State, and in regard to our resources to people outside the State, have been carefully prepared and promptly furnished.

NATIONAL CORN EXPOSITION.

Early in the year 1911, the opportunity developed for a combined effort to bring to the South and to the Capital City of our State the next annual National Corn Exposition, which is, perhaps, the greatest annual agricultural event held in this country. It had never left the Corn Belt States. Bearing the invitation of the General Assembly, and of all proper officials of State and City, a strong South Carolina delegation, carrying Jerry Moore, went on to Columbus, Ohio, where the 1911 show was being held, and pushed the matter. The result is that the next Exposition is to be held in Columbia, S. C., January 27-February 9, 1913, and already the National Secretary is at work in offices in Columbia. A large steel structure is being erected for the Exposition. This Exposition will, beyond question, prove

one of the greatest and most far-reaching advertisements South Carolina ever secured, and should bring handsome returns.

NATIONAL DRAINAGE CONGRESS.

In like manner, by vigorous effort, the third annual meeting of the important National Drainage Congress has been secured for this State, the meeting being held in the City of Charleston during the Corn Exposition. It will bring distinguished and substantial men from 39 States on a visit to South Carolina. This is the culmination of work to this end begun by this Department three years ago, with a view to the stimulation of drainage reclamation of our valuable coastal low lands, and in the first week of the year 1912, it has resulted in the formation of a State Drainage Association and the launching of a number of drainage district projects under the new State Drainage Act.

EDUCATIONAL CAMPAIGN.

During this year the most vigorous educational campaign ever prosecuted in the State was executed, and not one-half the calls could be met, though the Clemson Extension Work and Winthrop College, with the co-operation of the railway companies, had their exhibits on agriculture, live stock and domestic science tour the State on a specially arranged train. This Department inaugurated and pushed its motor car far-rural campaign, in which, during the first week, the head of the United States Farm Demonstration Work, Mr. Bradford Knapp, and other experts participated. The head of this Department has been on campaigns in all parts of the State throughout the year, addressing farmers' gatherings, schools and colleges, county fairs and gatherings of all kinds, such as the Rural Life Conference at Winthrop, the Farmers' Rally at Clemson, and the State Good Roads Convention. At the height of the season sometimes as many as 18 to 20 points would be covered in a week.

STEADYING THE COTTON MARKET.

The situation resulting from the abnormally large crop of cotton, threatening from the first millions of dollars of loss to South Carolina farmers, by reason of the fall in price below the cost of production, has commanded the attention of the Department, and required much earnest and painstaking labor.

The department heads of each of the Cotton Belt States early conferred among themselves and then with the President of the National Farmers' Union, resulting in the calling of a conference at Montgomery, where the acuteness of the situation became so apparent that the Southern Cotton Congress was formed and your Commissioner was called to its presidency. From that time on, the fight for better prices, or at least, for maintaining the price around 9 cents, was waged with untiring zeal, even into township divisions. The holding movement was first resorted to for its market-steadying effect. Then one move after another had to be resorted to until the date of December 1 came, this being a crucial date in circles wherein cotton market manipulations are conducted. It was then that the opportunity came, through an offer of fifty millions of dollars, made by Eastern capitalists, whose names were widely known, by the mere announcement of that offer to the world, to steady the market through the crucial period and prevent the almost certain break in price. It was almost a foregone conclusion that the plan offered would not be accepted, and the Governor's committeemen and those from the Congress did not recommend acceptance. While the discussion was at fever heat, the real danger of a further serious break in prices passed and the "Rock Hill" plan for securing pledges of reduction of acreage was launched to further steady the market until the real truth as to the actual size of the crop could be made known. Just this has happened, and as this is written, prices have risen gradually and with every indication of continued stability. Each move made has served its purpose in the face of a 15,000,000 bale crop, and while the loss to South Carolina farmers alone, due to the conditions which seemed uncontrollable, has been, perhaps, some twenty millions of dollars, the steps taken and the fight made, has undoubtedly saved a vast sum that would almost certainly have been lost otherwise. The educational value of the experience to the farmer cannot be calculated. Doctrine that he has listened to from every stump for the past six years has been brought home with shoe-pinching impressiveness.

BETTER VARIETIES OF COTTON.

During this year exceptionally good results, following the effort in a modest way to bring about the production of varieties of cottons of the proper staple for consumption in local

textile plants, in the manufacture of fine goods. All this cotton has heretofore been brought from the Mississippi Valley States. Selected seed was distributed and careful instructions given, and those who grew the cotton sold direct to the mills at an acreage price of about 171-2 cents per pound. Due caution against the danger of over-production the coming year has been given all growers. The chief object of this undertaking is to apply the principle of raising home supplies, for the mills are rapidly turning over to the class of goods for the manufacture of which the staples of the Columbia, Keenan, Hartsville and Webber varieties are particularly adapted. These varieties have proven as prolific as the export short staple varieties, have developed splendid drought resistant qualities and preserve absolute uniformity of staple. Work done along this line looks rather to the future than to the immediate present.

Some work has been done looking to the introduction of mule raising in the State, and no opportunity has been neglected to push the campaign for "more and better live stock." This work is daily becoming more active.

Important matters affecting the development of the commerce of the State, as will be found from the body of this report, have been given much attention.

THE STATE EXHIBIT.

The State exhibit property has been rehabilitated after considerable effort, due to the haphazard manner in which it had been scattered, and acting under the provisions of the Act of 1911, the Commissioner of Agriculture, accepting the offer for installation and care in one of the new main buildings at the State University, where the material is installed and open to daily inspection, and where it is so arranged that it can be moved quickly and safely to any exposition, in whole or in part, and be as speedily set up.

BELATED REPORTS.

The difficulty of securing the manufacturing statistics of the plants in the State in time for presentation promptly to the General Assembly, due to the late date in the year permitted by the law for the filing of schedules, is great, and this defect in the Factory Inspection Act should be remedied.

Several new labor laws have recently become of force, but

they can be made effective only through provision for means of enforcement, as provided for in each.

AGRICULTURAL EDUCATION.

The demand for secondary agricultural education in the State continues to grow with the renewal of interest in all matters pertaining to agriculture, and I would again most respectfully call attention to the report on this subject made to the General Assembly by the special commission appointed for the purpose.

During the past year the United States census has issued preliminary summaries of the 1909-10 census of population, agriculture and live stock in South Carolina, and I have deemed it of value to incorporate, for the public information, digests of these summaries, as it will possibly be a year or more before the regular census publications will have been issued.

This Department has endeavored to render to all branches and bureaus of the United States Department of Agriculture, as it has always done, the fullest measure of co-operation, and this year several new lines of work have been undertaken upon this basis. The representatives and agents of the Federal Government assigned to this State have rendered invaluable service to the Department.

DEATH OF DR. KNAPP.

Early in the year South Carolina lost one of her truest and best friends, when death claimed the distinguished Dr. S. A. Knapp, the head of the United States Farm Demonstration Work, by whom that work was introduced in this State at an opportune moment, and with such immediate and far-reaching results.

PUBLIC HIGHWAY CONSTRUCTION.

The present system of public highway construction and maintenance in the State is crude and results in a heavy annual waste of money, time and energy, with but little permanent results. In this regard, our sister States are rapidly outstripping South Carolina. There is now a fully developed interest in the subject, and I would respectfully commend it to the most careful attention of yourself and the General Assembly. A suggestion

looking to some improvement at a minimum of cost is contained in my formal recommendations herein.

During the year the attempt has been made, under the general provision of the law giving the Commissioner authority to call upon other officials for statistical information, to gather accurate statistics in regard to the public highway situation in the State. This information, collated from the actual reports this year and from estimates based on 1909 returns, shows a total public highway mileage of 47,885. Of this 4,527 3-4 miles have been treated in one way or another with sand-clay, but the greater portion of these roads could scarcely be called sand-clay roads. There are 111 miles of macadam road in the State, 427 miles that have been treated with gravel and 62 with shell.

SIGN-POSTING.

During the year the Goodrich Tire Company has made an offer, which has been accepted, to mark all of the interstate and intercity main highways in the State with pressed steel sign-posts, giving exact mileage. This sign-posting is to be done without cost to the State, this Department undertaking to furnish all of the necessary data and distances for the proper marking of the highways.

THE YEAR 1911 IN AGRICULTURE.

The year 1911 has been better in general agriculture, upon diversified lines, than its predecessor. The corn crop of the State showing an increase, notwithstanding the bad corn year, of \$3,750,000, and the oat crop approximately a half million dollars. The tobacco crop, according to final Federal Government figures, though far smaller than that of the preceding year, showed about \$33,000 increase in value. The rice crop fell off badly. The real loss in agriculture was due to the abnormal crop of cotton, resulting in consequent low prices, which has netted to the farmers of this State a loss of about \$17,100,000; this as compared to the money received from the crop and seed of the preceding year. In the year 1910 the total value of the cotton crop and seed was \$98,630,000, the largest amount received in the agricultural history of the State. The destruction of the rice crop by the storms caused a loss of nearly \$200,000, as compared to the crop of the preceding year.

Upon the same basis as the Federal Government's valuation of agricultural products of \$140,009,000, for the year 1910, the total value of the agricultural products for the year 1911 was \$127,222,743, thus making a net decrease for the year 1911, as compared to the year 1910, of \$12,787,000.

NEW CONSTRUCTIVE LAWS.

This Department, since its organization, has been directly instrumental, through its recommendations and activities, in making permanent upon the statute books of the State a number of the most important constructive laws now in force. Among these may be mentioned the Drainage Act, Commercial Feed Stuffs Act, the Seed Inspection Act, the Act relating to the State exhibit property, the new Child Labor Act, the Factory Inspection Act, the Act relating to hours of labor of female employees in mercantile establishments, the Act relating to provision for seats for women employees, the marriage license law, and the law requiring the reporting of sales of leaf tobacco. In each instance these measures were recommended from this Department and all possible assistance was rendered to the legislative committees in the matter of their proper construction.

Complete detailed statements of all receipts and expenditures of this Department are appended to this report for each of the appropriations, with the expenditure of which the Department has been directly or even in part charged.

NEED FOR QUARTERS.

The need for some permanent quarters for the Department is more acute than ever, owing to the added branches of work. At present the offices are located in a dry-goods warehouse on an alley between Main and Assembly Streets, back of the Palmetto National Bank, where the exposure to fire loss of valuable State records is great. These records are now more extensive than in the past and the danger to them from two removals each year is serious. Again all work at the end of the year is of necessity suspended for several days during the removal from the Capitol to temporary quarters. The laboratories are located on the second floor of the former State Dispensary building, State property, which the Department leases from the lessee of the property.

OFFICE FORCE.

The office, laboratory and feed inspection forces of the Department remain practically the same. The positions of the statistical clerk and of the two factory inspectors became vacant at the close of the last session, when no provision was made for salary. I at once called for the resignations of the incumbents, and upon receiving them, notified the Chief Executive of the State and made no appointments to fill the vacancies.

FINANCIAL.

During the year this Department was charged with the expenditure of \$500 in prizes for farmers. This sum was expended entirely, being paid out to winners in the State Corn Contest.

The appropriation of \$3,000 for the corn breeding work and Exposition was also exhausted, being paid out by warrants drawn by the Commissioner of Agriculture, by direction of the Commission provided for in the Act, upon accounts approved and certified to the Commissioner by the Chairman of the Commission, A. D. Hudson. The greater portion of the appropriation was expended for prizes in corn work. None of this money was expended until the Commission had certified to the Comptroller-General that the contingent amount required to be raised had been subscribed.

The appropriation of \$10,000 in aid of the United States Farm Demonstration Work in the State was expended in payment of salaries chiefly. All appointments under this work, with the consent of the Commissioner, and necessarily, were made by the Federal officials in charge. The sum of \$1,000 was held back to the end of the year for the purpose of meeting any emergencies, but most of this was expended in payment of accounts made by the officials of the Demonstration Work. A balance of \$200.01 remained at the end of the year and was covered into the State treasury.

The appropriation for the general expenses of the Department was entirely exhausted, except for a few cents.

Itemized statements of the expenditure of all these appropriations are appended at the end of this report.

The following is a condensed statement of the receipts of this Department from sources other than direct appropriations, and

the expenditures made during the year, itemized statements of the expenditures being likewise appended:

Income from tax on commercial feed stuffs:

Balance on deposit with State Treasurer January	
1, 1911	\$ 4,727.88
Amount collected for twelve months ending December	
31, 1911	18,150.80
	\$22,878.68
Total expenditures	17,388.71

Balance on deposit with State Treasurer January 1, 1912.....	\$ 5,489.92
--	-------------

Income from fees from inspection of seeds:

Balance on deposit with State Treasurer January 1, 1911	\$3.50
Amount collected for twelve months ending December 31, 1911.. . . .	1.75
	\$5.25
Expenditures	None

Balance on deposit with State Treasurer January 1, 1912 \$5.25

Financially this Department is now practically self-sustaining. There was appropriated by the Legislature at its 1911 session, \$21,520, charged to this Department. Of this amount only \$8,020 was appropriated for the direct use of the Department—\$4,020 for salaries and \$4,000 for expenses. Of the balance of \$13,500, \$10,000 was for farm demonstration work, expended in a manner elsewhere indicated; \$3,000 was expended by the Corn Breeders' Association, and South Atlantic Corn Exposition, and \$500 was for prizes for farmers in the State Corn Contest.

There has been collected since May 1, 1910, when the Commercial Feed Stuffs Act went into effect, \$33,028.08 from the sale of inspection tax stamps, and penalties imposed. This

fund has been expended in the enforcement of the law and in the establishment of a permanent State Feed Stuffs Laboratory, which has cost for equipment about \$3,000. This expenditure does not mean an expense to the State, but means that the \$3,000 is invested in permanent fixtures, and that the State now possesses one of the most modern and completely equipped laboratories in the South. The Department has, also, partly from this fund and partly from the general expense appropriation, purchased a motor car at a cost of \$1,350. This was done after consultation with the Governor and after complete and full notice to the public of the objects and purposes for which the car would be used. This car has been steadily used in the prosecution of agricultural work, and in the inspection of stocks of small stores in the far-rural districts of the State, which could be reached in no other way. The car is now, perhaps, in better condition and of more value than when it was purchased.

Of the fund of \$33,020.08 derived from the tax on feed stuffs, there is a balance on deposit with the State Treasurer on January 1, 1912, of \$5,489.92. Considering the permanent investments that are the property of the State, at their present value, the actual balance at this time would be \$9,839.92, or \$1,839.92 more than was appropriated for the contingent expense of this Department for both the years of 1910 and 1911.

RECOMMENDATIONS.

In the making of recommendations, this Department has ever proceeded reluctantly, and no recommendation has ever been sent to the General Assembly that has not been prompted directly by the general welfare of the people of the State to the exclusion of every other consideration. With this said, the following matters are called to the attention of your Excellency and the General Assembly of South Carolina:

1. That a law should be forthwith enacted providing for standard weights and measures of chief commodities, at least, and such machinery provided for the enforcement thereof as would protect the people from the great losses now sustained by reason of short weights. The present laws are both inadequate and ineffective.
2. That a similar law to that requiring the filing of reports of tobacco purchases and sales with the Commissioner of Agriculture be enacted requiring all ginner and cotton buyers

to report monthly pounds and bales of cotton ginned in the first instance, and number of bales of cotton, grade and prices paid in the second instance.

3. That it is absolutely necessary, in order to properly protect and safeguard valuable State records in the possession of this Department, which is now charged with the conservation of nearly all the human resources of the State, as well as the material resources, that some provision be made for proper quarters, thus obviating the dangers incident to two movings of office each year. How this need shall be met is a matter for the General Assembly to consider, and not for this Department to suggest.

4. That this Department endorses and urges the enactment of the proposed measure relating to messenger boys and stage children.

5. That the report of the special commission created by resolution of the General Assembly at its 1910 session in the matter of agricultural education, be embodied into a proper measure and be speedily enacted into law in view of the fact that there is a wide-spread demand throughout the State for provision to be made for such instruction. This Department has for years consistently recommended that effective provisions be made for agricultural education and training in the rural community districts of the State. This report seems to provide the most practical, the most effective, and the least expensive system ever suggested in this country, and I cannot too strongly urge its enactment into law. I would recommend, further, the application of this scheme to the industrial districts of the State.

6. That this Department, as it has done since its creation, again repeats its strong recommendation for the enactment of a law requiring the registration of births and deaths, such as is required in practically every State in the Union, and calls attention to the fact that it is well nigh an impossibility to enforce the child labor laws of the State properly without such a law.

7. That the recommendations heretofore made that provision be made for a State Highway Engineer to be attached to this Department, if deemed advisable, is renewed and most respectfully urged. The great need for intelligently directed work on the public highways of the State is being more

keenly felt than ever before, and steps similar to this have been taken in nearly all of our sister States.

8. That a general appropriation of \$3,500, if so much be necessary, be made for the printing and issuing of a 1912 edition of the Handbook of South Carolina, the work of preparation and compilation of the volume to be done by the Commissioner. The 1908 edition has been completely exhausted, and there are daily requests for copies from schools and colleges in the State, and from hundreds of prospective investors and others beyond the borders of the State. The demand for the Handbook is greater now than at any time since it was first issued. The most noteworthy advances in agricultural and other development in South Carolina have occurred since the 1908 edition, and a new issue would prove of incalculable value at this time.

9. That the Seed Inspection Act be amended so as to provide from the operation of the law the means for its enforcement. The manner in which this can be done is pointed out elsewhere in this report. Seed inspection is rapidly becoming of more vital importance to the agricultural industry, and the provisions of the law should be enforced.

10. That a law be enacted for the complete inspection of illuminating oils, such law raising its own revenue for enforcement. I would recommend a law similar to that in force in the State of North Carolina, which in that State is already providing an annual income of some \$60,000, I understand, and is giving the people adequate protection. South Carolina is now merely a dumping ground for inferior illuminating oils.

11. That the pure food and drug Act of the State should be almost entirely reconstructed and made of real effectiveness. As it stands, though the State Board of Health and this Department, by a co-operative arrangement, have endeavored to bring about some degree of enforcement, the law is so defective in essential particulars and the authority for enforcement is so divided and vague that practically nothing has been accomplished. The inspection work, and, indeed, all matters relating to the enforcement of the law should be in the hands of the Commissioner of Agriculture, and the necessary expenditures should be from the revenue derived from the Commercial Feed Stuffs Act. There is immediate and urgent need for the remodeling of this particular law.

12. That the sums specified in the Factory Inspection Act and the new Act relating to seats for women clerks to be annually provided for by the General Assembly for the enforcement of the labor laws of the State, be appropriated; no proper enforcement of these important laws can be had without the provision being made annually, as required by the Statutes. During the past year these appropriations were not available.

13. That the bill now pending, amending the Factory Inspection Act, so as to incorporate in that Act the system of issuing permits and keeping records of child labor already provided for in the new child labor law, approved by the Governor in February last, and effective January, 1912, and giving authority for the safeguarding of machinery and care for sanitation in manufacturing plants, and, further, changing the dates for filing schedules, be enacted into law. At present no authority is vested in any one to see to the protection from exposed machinery or from bad sanitation.

14. That the admirable Drainage Act passed by the General Assembly at its last session be amended in certain slight particulars necessary for its perfection.

15. That liberal support be given by the State as heretofore to the United States Farm Demonstration work, but that any appropriation made therefor not be chargeable to this Department, but be properly classed under the head of "Miscellaneous," and that the duties of the Commissioner be confined simply to the ministerial function of drawing warrants for the payment of accounts against the appropriation when such accounts have been certified to him from the Washington office of the United States Demonstration work. This will be, in effect, merely following the course heretofore pursued, and relieve the Department from being charged with a large item and much responsibility without executive authority, and, in my opinion, would prove more satisfactory in every sense to all concerned and just as effective in the end.

16. That the law relating to hours of labor in textile plants be amended so as to make it at least possible of interpretation. As this Act stands, with its provisos, it gives ample opportunity to frequent open violation of its intent and purpose, and gives rise to continued complaints from the employees which this Department is powerless to handle, the reasons for such inability to act being difficult to explain to the complainants.

17. That the salary of the clerk of this Department be made equal to that of the clerks in the other departments (save two, which are higher) because of increased duties imposed by law. The increase recommended is \$100.00.

18. That the proposed forestry measure now pending before the General Assembly be enacted in order that important work in connection with the conservation of the forestry of the State, now badly needed, may at least have a beginning.

19. That provision be made to carry out the suggestion of the United States Engineer given elsewhere in this report as to the gauging of the rivers of the State. This suggestion calls for merely a small appropriation for work of a co-operative character daily rendered more important by reason of the increased development of the water powers of the State.

20. That authority be given to send such exhibit material as in the judgment of the Commissioner of Agriculture may be necessary, from the State exhibit property, to be permanently installed in the new Southern Commercial Congress building in the city of Washington, the title thereto, however, remaining in the State of South Carolina.

These recommendations, on their face, look alarming, no doubt, but an examination of each will show that they carry practically no increase in appropriations, but simply legal enactments, which, in its experience, this Department deems absolutely necessary for the future welfare and development of the natural resources of the Commonwealth, both material and human. Each of them should appeal to the calm reason of the man who has the welfare of his State at heart. They are made here in cumulative manner for the reason that this Department is now virtually returning to the State Treasury the bulk of what it has to draw out by direct appropriation, after enforcing most of the existing new laws, and will, inside of a year, very probably be returning to the State, not only the amount of the necessary appropriations called for, but also giving to the treasury a fair surplus over and above those appropriations.

In the several reports of the various divisions of this Department I have endeavored to present these matters squarely and honestly, with an eye single to the welfare of the State, in the light of her finances, and am suggesting nothing that does not count for the future in dollars and cents in addition to the material advancement of our people.

I—AGRICULTURE.

As already pointed out in the general introductory portion of this report agriculture in South Carolina in the year 1911, notwithstanding the greatest crop of cotton in volume that the State has ever recorded, driving South Carolina up to fourth as a producing State, suffered severely in money value of products because of the low prices prevailing for the chief product—cotton. The year was a bad one for corn, but notwithstanding that fact the corn crop, under the stimulus of the campaign for more corn, was largely increased over the crop of the preceding year which was the best in the history of the State. The fall hurricane almost eliminated the rice industry as a value factor in this year's crop statistics. While the money loss on the cotton crop, however, was so heavy, the net decrease in value of the leading crops upon the basis of last year was only about \$12,787,000. If there had been a state of preparedness for meeting the conditions in regard to cotton, which confronted the people so suddenly, such as a complete system of warehouses and a means for financing a gradual marketing movement for cotton, perhaps the year 1911 would have resulted in a far different story. The losses have served a good purpose, however, in impressing upon the producer of cotton the absolute necessity of raising home supplies and of arranging at the earliest possible moment for some effective means to enable him to hold his cotton and market it gradually instead of being forced to dump the entire crop on the market almost as soon as it is harvested.

South Carolina's proud and enviable record in agriculture in the past few years has been so fully dealt with in my last annual report, and in the introductory pages of this report that I deem it scarcely worth the time to further dwell upon it.

STATISTICS OF AGRICULTURE.

The following are the latest revised statistics of the chief crops of the State for the years 1910 and 1911, such revision being upon the basis of the 1909-10 Federal Census figures; the figures for preceding years are found fully set forth in the last annual report:

	ACREAGE.	
	1910	1911
Corn.. . . .	1,707,000	1,790,000
Wheat.. . . .	77,000	83,000

Oats..	336,000	345,000
Barley..	515	500
Rye..	3,000	3,000
Potatoes..	10,000	10,000
Hay..	67,000	64,000
Cotton..	2,534,000	2,705,000
Tobacco..	25,000	13,600
Rice..	17,000	10,000
	<hr/>	<hr/>
	4,776,515	5,024,100

PRODUCTION.

	1910	1911
Cotton (bales)	1,176,081	1,240,520
Corn (bushels)	31,580,000	32,578,000
Hay (tons)	84,000	69,000
Wheat (bushels)	847,000	946,000
Oats (bushels)	7,056,000	7,038,000
Tobacco (pounds)	18,802,875	11,016,000
Irish Potatoes (bushels)	900,000	700,000
Rye (bushels)	30,000	30,000
Rice (bushels)	357,000	117,000

VALUE OF PRODUCTS.

	1910	1911
Cotton..	\$ 98,630,000	\$ 81,576,360
Corn..	25,896,000	29,646,000
Hay..	1,344,400	1,173,000
Wheat..	1,067,000	1,164,000
Oats..	4,586,000	5,067,000
Tobacco..	1,354,500	1,388,016
Irish Potatoes..	945,000	854,000
Rye..	44,000	44,000
Rice..	268,000	88,000
	<hr/>	<hr/>
	\$184,127,500	\$121,000,376

	YIELD PER ACRE.			
	United States		South Carolina	
	1910	1911	1910	1911
Cotton (pounds lint). . .	169.1	—	216	—
Corn (bushels)	27.4	23.9	18.5	18.2
Wheat (bushels)	15.8	12.5	11.4	11.0
Oats (bushels)	31.9	24.4	20.4	21.0
Potatoes (bushels)	93.4	80.9	70	90
Tobacco (pounds)	795.4	893.7	810	630
Rye (bushels)	16.3	15.6	10.0	10.0
Hay (tons)	1.34	1.10	1.08	1.25
Rice (bushels)	33.8	32.9	11.7	21.0

Particular attention is directed to the steady increases of yields per acre, and their near approach this year to the averages for the United States.

THE RICE INDUSTRY.

The rice industry along the Atlantic coast has met with serious set-backs during the past year, due primarily to the low prices prevailing since the opening of 1910, and the severe storm which wrought damages to the extent of thirty-five to forty per cent. of the crop. The injury to the banks, trunks, etc., on the plantations, which at first was reported as very great, has not been as serious as feared, and almost all of the plantations have already been put in order for the coming crop. Although prices are still low, our planters are hopeful and determined, and considerable progress has been made in preparation for the planting of the crop of 1912. The acreage will not be as large as that of 1910, but more intensive cultivation will be followed, and fertilizers will be used more extensively; following these lines and with normal, favorable weather conditions, it is probable that the intelligent and persistent efforts of our rice planters will be rewarded with the satisfactory results they so fully deserve.

THE TOBACCO CROP.

As was to have been expected, the sales in the loose leaf tobacco markets of South Carolina in October, 1911, were very light, a total of 100,236 pounds being disposed of, at an average of 8.32 cents per pound. Of this amount 23,011 pounds were for producers at first hand, and 77,225 pounds were resales.

Sales were held in Lake City and Nichols only, the former disposing of 45,016 and the latter 55,220 pounds. In October, 1910, there were 1,175,920 pounds sold in the loose leaf tobacco markets, at an average price of 9.6 cents.

There were sold for producers at first hand for the year 1911 a total of 11,101,006 pounds of tobacco, as against 18,802,885 in 1910, a decrease of 7,701,879 pounds, or 40 per cent. The total prices obtained for the two years, and averages per pound were \$1,352,362.84 and \$1,604,685.44, and 12.3 and 8.7 cents respectively, a shrinkage in amount of \$252,222.60, or 15 per cent., in 1911, and an increase of 3.6 cents in average price per pound, or 41 per cent.

The above figures are those from the actual sworn report filed with this Department by the warehouses as required by law. The recently issued Federal Government figures show a slightly different result, a production of 11,116,000 pounds, selling for \$1,388,016, as against the crop of 1910 selling for \$1,354,500, thus indicating that this year's crop, though so much smaller than that of last year, brought over \$33,000.00 more.

The following is the summary of sales for the year by markets:

SOUTH CAROLINA TOBACCO SALES BY MARKETS.—1911.

	July.		August.		September.		October.	
	Pounds.	Amount Paid.	Pounds.	Amount Paid.	Pounds.	Amount Paid.	Pounds.	Amount Paid.

NEED FOR REPORTS ON COTTON.

One of the greatest needs of the agricultural industry of the State is the securing and furnishing by State authority of accurate information throughout the season in regard to cotton acreage, the growing crop, ginning and marketing. In this connection I wish to repeat with increased earnestness the recommendation made last year: "That a similar law to that requiring the filing of reports of tobacco purchases and sales with the Commissioner of Agriculture be enacted requiring all ginner and cotton buyers to report monthly pounds and bales of cotton ginned in the first instance and number of bales of cotton, grade and prices paid in the second instance."

The Southern Cotton Congress recently adopted the following in regard to this matter:

"Resolved, further, That the Convention favors the adoption of uniform laws by the cotton growing States, providing for the gathering of statistics and facts and estimates from time to time showing, or tending to show, the production of cotton in the cotton growing States.

"Resolved, further, That the Committee on Legislation of this body be instructed to prepare a suitable bill to accomplish this purpose and to submit it to the respective legislatures of the cotton growing States for enactment into law and this information be interchangeable between the several States and to be given to the public simultaneously."

PROGRESS OF SOIL SURVEY WORK.

During the past year much valuable work has been done in the State by the Federal Soil Survey, and as far as possible this Department has co-operated. There is a widespread demand for an extension of the work. By request, Hon. Milton Whitney, Chief of the Federal Bureau of Soils, has furnished the following brief outline of the work in South Carolina during 1911:

The work of the Bureau of Soils of the United States Department of Agriculture, covering the period from 1902 to 1911, inclusive, covers seventeen areas, comprising 5,555,212 acres, two counties being surveyed during 1911, namely, Georgetown and Fairfield, and two counties are promised for the present season, namely, Barnwell and Chester. The following list gives the names of the areas surveyed and assigned, and the number of acres covered by each:

1902 Abbeville area.. . . .	664,160 acres
1902 Darlington area.. . . .	383,680 acres
1903 Campobello area.. . . .	329,420 acres
1904 Charleston area.. . . .	225,344 acres
1904 Orangeburg area.. . . .	454,080 acres
1904 Lancaster County.. . . .	311,232 acres
1905 Cherokee County.. . . .	280,912 acres
1905 York County.. . . .	428,416 acres
1907 Lee County.. . . .	262,848 acres
1907 Sumter County.. . . .	275,424 acres
1907 Oconee County.. . . .	417,216 acres
1909 Anderson County.. . . .	446,080 acres
1909 Saluda County.. . . .	283,520 acres
1909 Conway area.. . . .	378,880 acres
1910 Clarendon County.. . . .	464,000 acres
* 1911 Georgetown County.. . . .	
*1911 Fairfield County.. . . .	
†1912 Barnwell County.. . . .	
†1912 Chester County.. . . .	

5,555,212 acres

From a comparison of the soils in each separate area, as well as from a comparison of similar soils in other parts of the country, an excellent opportunity is offered to state the relation of various soils to the production of certain crops.

In the course of a survey an opportunity is also offered to find out the soils which are best adapted to the great staple crops in different parts of the country, and to recommend that those soils best suited to these crops be exclusively planted to them, such as the best cotton soils of the South, or the corn soils of the Middle West, or the wheat lands of the Northwest, or the truck soils of the South Atlantic States. In this connection information is furnished in many cases so as to give direct advice as to the giving up of the growing of those crops which are at present grown on certain soils that are not suited to them.

By defining the areas of the various soil types the soil survey furnishes a true basis for experimentation by the various

*Not completed.

†Barnwell and Chester Counties will be assignments for the present season.

cultural methods, fertilization, crop rotation, or crop adaptation. This is done by pointing out the characteristics of the various soils, and the knowledge that such soils need specific treatment depending upon their physical character and natural fertility.

By furnishing definite information about certain sections of the country, new localities can be settled intelligently, without the risk of great disappointment on the part of the prospective emigrant or those seeking to establish colonies. By knowing the demands of settlers we can with the aid of the soil survey furnish definite information in regard to the country which it is proposed to settle.

The soil survey work has not been pushed as rapidly as desired in the State of South Carolina owing to the limited funds available for this purpose, and active co-operation is suggested in order to meet the great demand for this work. Many of the States are appropriating funds to assist in this work, and South Carolina should lend its aid in the study of the soil, its best agricultural use under a wide variety of conditions, and the information thus obtained made available to all farmers who are engaged in the handling of the soils to enable them to keep abreast of the times in the management of their farms.

Sufficient work has been done in the State to warrant the establishment of experimental plots upon a known soil for making tests of the fertilizer requirements, adaptation to special varieties of seeds, and studying the proper time and depth for plowing, and other factors of soil management which enter into the successful handling of a farm.

U. S. Census Farm Data.

THE RATES OF INCREASE AND DECREASE.

The following digest of United States Census Farm data for South Carolina was issued by the United States Census Bureau on June 29 last, and is incorporated herein because of the demand for the information in advance of the publication of the thirteenth census:

Acting Census Director Falkner issued today the first official statement from the Census Bureau relative to the agricultural statistics of the State of South Carolina collected at the Thirteenth Decennial United States Census, April 15, 1910.

It is based on a preliminary comparative summary submitted by Dr. LeGrand Powers, chief statistician of the division of agriculture in the Bureau of the Census. This summary shows, for both the census of 1910 and that of 1900, the reported total value of farm land, buildings, and implements and machinery; total acreage; improved acreage; average acres per farm; average value per acre of farm land and buildings; average value per acre of farm land alone; and the aggregate expenditure for labor and fertilizers. It also distributes the total number of farms according to color of farmer; specified character of tenure; whether held free or mortgaged by owners; and by certain acreage groups.

Attention is called to the fact that the figures are subject to revision later, as a number of farms, whose returns are incomplete, will be included in the final tables. These additions will not, in all probability, modify any of the amounts or rates contained in the present statement.

The census of agriculture was taken primarily for the purpose of obtaining an accurate inventory of all classes of farm property existing on April 15, 1910; a complete exhibit of farm operations during the year ended December 31, 1909; and a statement of the number and value of domestic animals in cities and villages on April 15, 1910.

Statements relative to acreage and yield of crops and the domestic animals of South Carolina will be issued by Census Bureau as soon as the tabulation of this data has been completed.

THE RATES OF INCREASE AND DECREASE.

It is pointed out in the statement today that the principal rates of increase in South Carolina in 1910, as against 1909, among the items for which percentages are given in the first section of the summary, are: In the total expenditure for fertilizers, 237 per cent.; in the average value per acre of farm land alone, 179 per cent.; in the average value per acre of farm land and buildings, 172 per cent.; in the total value of all farm land alone, 169 per cent.; in the total value of farm land and buildings, 162 per cent.; in the total value of farm buildings, 137 per cent.; in the total value of all farm implements and machinery, 112 per cent.; in the total expenditure for labor, 76 per cent.; in the whole number of farms, 13 per cent.; and in the total improved farm acreage, 5 per cent.

Only two decreases are reported among the items for which rates are given in the first section of the summary. These are 16 per cent. in the average acres per farm, and 4 per cent. in the total farm acreage. An explanation of this decrease is given below.

The statement shows in detail that the number of farms reported in 1910 was 176,180, as compared with 155,355 in 1900, an increase of 20,825, or 13 per cent.

FARM VALUE.

The total value of farm land and buildings was given in 1910 as \$331,833,000, as against \$126,762,000 in 1900, an increase of \$205,071,000, or 162 per cent.

The total value of all farm land alone was reported in 1910 as \$267,931,000, as compared with \$99,806,000 in 1900, a gain of \$168,125,000, or 169 per cent.

The total value of all farm buildings alone was given in 1910 as \$63,902,000, as against \$26,956,000 in 1900, an increase of \$36,946,000, or 137 per cent.

In 1910 the value of the farm land alone constituted 81 per cent. of the total value of land and buildings, as compared with 79 per cent. in 1900.

The reported value of farm implements and machinery was \$14,067,000 in 1910, as against \$6,630,000 in 1900, a gain of \$7,437,000 or 112 per cent.

The total acreage reported in 1910 was 13,469,000 acres, as compared with 13,985,000 in 1900, a decrease of 516,000 acres, or 4 per cent. An error of 100,000 acres was found in the total acreage reported for Spartanburg County for 1900, so that the real decrease for the State was 416,000 acres, or 3 per cent. About 350,000 acres of this decrease is found in the coast counties. In 1900 this land was reported to be in farms, although, as a matter of fact, it was woodland and other unimproved land not used for farm purposes. This land was not reported as in farms in 1910.

The improved acreage was returned in 1910 as amounting to 6,085,000 acres, as against 5,776,000 in 1900, an increase of 309,000, or 5 per cent.

The improved acreage formed 45 per cent. of the total acreage in 1910 and 41 per cent. in 1900.

The average acreage per farm reported in 1910 was 76, as against 90 in 1900, a decrease of 14 acres, or 16 per cent.

The average value per acre of farm land and buildings in 1910 is stated as \$24.64, as against \$9.06 in 1900, a rise of \$15.58, or 172 per cent.

The average value per acre of farm land alone in 1910 was reported as \$19.89, while in 1900 it was \$7.14, the amount of gain being \$12.75, or 179 per cent.

COLOR OF FARMERS.

Of the whole number, 176,180, of farms reported in 1910, there were 79,484, or 45 per cent., operated by white farmers, and 96,696, or 55 per cent., by negro and other nonwhite farmers, as compared with a total of 155,355 in 1900, of which 69,954, or 45 per cent., were conducted by white farmers, and 85,401, or 55 per cent., by negroes and other nonwhites. The increase in the number of farms of white farmers during the decade amounted to 9,530, and in the number of farms of negro and other nonwhite farmers, 11,295.

FARM OWNERSHIP.

The total number of farms operated in 1910 by owners, part owners, and owners and tenants, comprising the "all owners" class, was 64,227, as compared with 59,417 in 1900, an increase of 4,810.

The total number of farms conducted in 1910 by cash tenants, share tenants, including standing renters and croppers, and share-cash tenants, comprising the "all tenants" class, was 111,097, as against 94,884 in 1900, an increase of 16,213.

The total number of farms operated by managers in 1910 was 856, as compared with 1,054 in 1900, a decrease of 198.

The total number of farms operated by the "all owners" class constituted 37 per cent. of the whole number of farms in 1910 and 38 per cent. in 1900; those operated by the "all tenants" class, 63 per cent. in 1910 and 61 per cent. in 1900; and those conducted by managers, 0.5 per cent. in 1910, and 0.7 per cent. in 1900.

Of the total number, 64,227, of farms operated in 1910 by the "all owners" class, there were 49,240, or 77 per cent., reported as "owned free of debt," and 14,987, or 23 per cent., reported as mortgaged. There were 1,776 farms for which no mortgage

report was secured, and these are included in the farms "free from debt."

In 1900 information was secured concerning the "owned farm homes." At that time 47,280, or 81 per cent., were reported "free from debt," and 11,181, or 19 per cent., as mortgaged. There were 4,220 farms in 1900 for which no mortgage report was secured, and these were included in the farms "free from debt." The Census Bureau has no information respecting the number of mortgaged farms leased to tenants.

DISTRIBUTION ACCORDING TO ACREAGE GROUPS.

The statement relative to farms distributed according to certain acreage groups shows that those of 19 acres and under numbered 37,932 in 1910 and 33,096 in 1900, a gain of 4,836; of 20 to 49 acres, 70,497 in 1910 and 54,384 in 1900, an increase of 16,113; of 50 to 99 acres, 33,114 in 1910 and 29,944 in 1900, a gain of 3,170; of 100 to 174 acres, 19,406 in 1910 and 20,532 in 1900, a loss of 1,126; of 175 to 499 acres, 12,494 in 1910 and 14,075 in 1900, a decrease of 1,581; of 500 to 999 acres, 1,933 in 1910 and 2,314 in 1900, a loss of 381; and of 1,000 acres and over, 804 in 1910 and 1,010 in 1900, a decrease of 206.

ACREAGE-GROUP PROPORTIONS.

Of the whole number of farms, those of 19 acres and under formed 22 per cent. in 1910 and 21 per cent. in 1900; those of 20 to 49 acres, 40 per cent. in 1910 and 35 per cent. in 1900; those of 50 to 99 acres, 19 per cent. in both 1910 and 1900; those of 100 to 174 acres, 11 per cent. in 1910 and 13 per cent. in 1900; those of 175 to 499 acres, 7 per cent. in 1910 and 9 per cent. in 1900; those of 500 to 999 acres, 1 per cent. in 1910 and 2 per cent. in 1900; and those of 1,000 acres and over, 0.5 per cent. in 1910 and 0.6 per cent. in 1900.

The expenditures for labor in 1910 reached the sum of \$10,734,000 as compared with \$6,107,000 in 1900, an increase of \$4,627,000, or 76 per cent.

The expenditures for fertilizers amounted in 1910 to \$15,130,000 and \$4,494,000 in 1900, an increase of \$10,636, or 237 per cent.

SUMMARY FOR THE STATE.

The preliminary comparative summary follows:
ALL FARMS BY ACREAGE, VALUE OF LAND, BUILDINGS, IMPLEMENTS, ETC.

	1910	1900	Per Cent. of increase, 1900-1910.

U. S. Statistics of Crops.

The following advance digest was also issued by the U. S. Census Bureau on October 30 last:

Statistics relative to the leading crops for the State of South Carolina, collected at the Thirteenth Decennial Census, April 15, 1910, are contained in an official statement issued today by

Census Director DuRand. It is based on tabular summaries prepared under the direction of Dr. Le Grand Powers, Chief Statistician for Agriculture in the Bureau of the Census. The figures are preliminary and subject to slight revision later, when a few other farms, whose returns, now incomplete, will be included in the final tables. It is not expected that these additions will materially modify the amounts or rates given in the present statement.

The leading crops of the State for 1909, ranked in the order of valuation, were: Cotton, \$80,338,000; corn, \$20,683,000; oats, \$3,809,000; hay and forage, \$3,189,000; sweet potatoes and yams, \$2,607,000; tobacco, \$2,124,000; dry peas, \$1,311,000; potatoes, \$609,000; and rough rice, \$520,000.

INCREASE IN COTTON.

Cotton in the 10 years from 1899 to 1909 increased 482,386 acres, or 23.3 per cent. Starting with 1,364,249 acres in 1879, cotton rose to 1,987,469 in 1889, to 2,074,081 in 1899, and again in 1909, to 2,556,467. The total yield in 1909 was 1,279,866 bales; the average yield per acre, 0.5 bale; the average value per acre, \$31.45.

DECREASE IN CORN.

For the decade ending 1909 corn showed a decrease of 206,225 acres, or 11.6 per cent. From 1,303,404 acres in 1879, corn increased to 1,345,990 in 1889, to 1,772,057 in 1899, but fell in 1909 to 1,565,832. The total production in 1909 was 20,871,946 bushels; the average yield per acre, 13 bushels; the average value per acre \$13.20.

OATS INCREASE.

During the decade between 1899 and 1909 oats increased 101,636 acres, or 45.7 per cent. From 1879, when 261,445 acres were reported, oats rose by 1889 to 308,056, fell to 222,544 by 1899, and again rose by 1909 to 324,180. The total yield in 1909 was 5,746,291 bushels; the average yield per acre, 18 bushels; the average value per acre, \$11.75.

HAY AND FORAGE NEARLY DOUBLES.

During the 10 years between 1899 and 1909, hay and forage increased 103,643 acres, or 97.7 per cent. It rose from 2,837 acres

in 1879 to 29,132 in 1889, to 106,124 in 1899, and again to 209,767 in 1909. The aggregate yield in 1909 was 186,131 tons; the average yield per acre, 0.9 ton; the average value per acre, \$15.20.

SLIGHT INCREASE IN SWEET POTATOES AND YAMS.

Sweet potatoes and yams during the decade between 1899 and 1909 increased 47 acres, or 0.1 per cent. From 39,059 acres in 1879 sweet potatoes and yams rose to 46,086 in 1889, to 48,831 in 1899, and again to 48,878 in 1909. The total yield in 1909 was 4,319,926 bushels; the average yield per acre, 88 bushels; the average value per acre, \$53.35.

SUBSTANTIAL GAIN IN TOBACCO.

Tobacco, from 1899 to 1909, increased 4,089 acres, or 15.7 per cent. From 169 acres in 1879, tobacco advanced to 394 in 1889, to 25,993 in 1899, and again in 1909 to 30,082. The total yield in 1909 was 25,583,049 pounds; the average yield per acre, 850 pounds; the average value per acre, \$70.60.

DRY PEAS INCREASE.

From 143,070 acres in 1899 dry peas increased to 265,632 in 1909, a gain of 122,562 acres, or 85.7 per cent. No acreage for dry peas was reported prior to 1899. The total yield in 1909 was 711,853 bushels; the average yield per acre, 3 bushels; the average value per acre, \$4.95.

SLIGHT INCREASE IN POTATOES.

During the decade ending 1909 potatoes increased 542 acres, or 6.7 per cent. From 1889, when 3,793 acres were harvested, potatoes rose to 8,068 by 1899, and again to 8,610 by 1909. The total yield in 1909 was 782,430 bushels; the average yield per acre, 91 bushels; the average value per acre, \$70.80.

DROP IN ROUGH RICE.

Between 1899 and 1909 rough rice decreased 58,166 acres, or 74.9 per cent. From 78,388 acres in 1879 rough rice fell to 42,238 in 1889, rose to 77,657 in 1899, but again fell to 19,491 in 1909. The total yield in 1909 was 541,570 bushels; the average yield per acre, 28 bushels; the average value per acre, \$26.70.

CROP COMPARISONS.

The cereals had an acreage of 1,955,695 acres in 1909, as compared to 2,251,050 in 1899, a decrease of 295,355 acres, or 13.1 per cent. Among the cereals corn ranked first, comprising about four-fifths of their total acreage and value. Oats stood second, having an acreage and value, respectively, about one-fifth as great as corn. The average value per acre of all cereals combined in 1909 was \$13, less by \$2.20 than that of hay and forage and about two-fifths as great as that of cotton. Of the cereals having important acreages corn ranked highest in average value per acre; wheat, lowest. Of the hay and forage crops "Grains cut green" ranked first in acreage and value, constituting about three-fourths of the entire hay and forage crop. "Other tame or cultivated grasses" was second in acreage and value, being approximately one-fifth and one-fourth, in each respect, as great as "Grains cut green." Coarse forage stood third both in acreage and value. Cotton in acreage and value, respectively, was nearly one and two-thirds and four times as great as corn. There were a few miscellaneous crops, and the most of them were above the more usual crops in value per acre.

THE TABULAR SUMMARY.

The following table presents the statistics of the leading crops and of certain minor crops for the year 1909. Data for other minor crops, fruits, vegetables, etc., will be published later:

CROP.	Farms Reporting.	Acres Harvested.	QUANTITY.		Value.
			Amount.	Unit.	
CEREALS, total.	1,955,605	27,494,754	Bushels	\$25,434,539

Chufas	55	141	2,192	Bushels	3,559
			Total....		\$144,397,319 00

*There were 1,928 acres of dry edible beans reported. A considerable amount of this acreage is a duplication of other crop acreage

†There were 265,632 acres of dry peas reported. A part of this acreage is a duplication of other crop acreage and a part was pastured and not harvested.

INTO THE FAR-RURAL DISTRICTS.

For the purpose of carrying modern agricultural methods and instruction to the farmer residing in the far-rural districts, or in other words, giving the farmer who rarely gets the chance to attend any kind of agricultural meeting an opportunity to obtain needed advice at his own farm door, a most advanced step in agricultural demonstration campaign was inaugurated in this State, beginning August 20 last, by the State Department of Agriculture.

The plan contemplated the introduction of the motor car for rural campaign service, enabling the campaigners, instead of covering only one place a day by train, to reach some ten or more crowds in different communities each day, without taking into consideration the individuals who could be visited along the public highways.

This new plan of campaign was inaugurated simultaneously with the week's visit of the head of the United States Farm Demonstration work, Bradford Knapp of Washington, D. C., who made the first week's tour and met the people at the eighteen different meetings that were held during the opening week. The territory covered embraced the Pee Dee, Sand Hill belt, Piedmont, the Ridge and Savannah valley sections of the State, and there was an average of three meetings per day.

The schedule of the meetings and the hours for each were as follows:

August 21—Saluda at 11 a. m.; Johnston at 3 p. m.; Edgefield at 5 p. m.

August 22.—Aiken at 10 a. m.; Ridge Spring at 2:30 p. m.; Batesburg at 4 p. m.; Lexington at 6 p. m.

August 23.—Irmo at 9 a. m.; Newberry at 12:30 p. m.; Prosperity at 2 p. m.; White Rock at 5 p. m.

August 24.—Winnsboro at 10:30 a. m.; Blythewood at 12:30 p. m.; Camden at 5 p. m.

August 25.—Bishopville at 12 m.; Hartsville at 4 p. m.

August 26.—Darlington at 10:30 a. m.; Florence at 12 m.

The following announcement was made to the public at the time the campaign was inaugurated:

"The plan announced is unquestionably the most advanced step that has ever been taken in any country for the cause of agriculture, for it is not only logical, but it is designed to meet the demands of the hour. When I found letter after letter pouring

in from farmers all over the State, living from five to twenty miles from a railway station, stating that they were deprived of the privilege of attending county seat and other town meetings and even seeing the demonstration train, which, of course, could only stop at stations, and showing that these very producers were crying and begging for information, I made up my mind that they should have at first hand instruction in the modern methods of farming, as long as it was in my power to give it to them.

"I forthwith began an investigation of conditions and found that with all the methods the farm demonstration work, this Department, Clemson College, the Experimental Station, the Feed Stuffs division of the Department and the Clemson Extension work were employing, we were not reaching more than one-fifth of the agricultural population, which constitutes 82 per cent. of the population of the State. If by reaching the one-fifth we could show an increase in one year's time of \$31,000,000 or 28 per cent. in the agricultural production of the State, I reasoned that it was worth while to try to reach the other four-fifths, and began to investigate as to the best method of accomplishing this end.

"I realized that the automobile has done much to revolutionize farm life in the State, and to it I looked for the fullest fulfillment of its mission. I realized that it could be made the means of educating the farmer crying for education on farming lines, and at the same time serve its completest mission of building good roads, bringing the distant farm to the market doors. I realized also that inspection of products shipped to cross-roads stores could not be conducted in any other way, and that a knowledge of this fact was making unscrupulous dealers bold. Then I consulted with many farmers all over the State, and all were enthusiastic.

"After consultation with the Governor of the State, to whom the plan was explained, I took the matter up with the various automobile manufacturers, and the result is that I have determined to send out Department of Agriculture demonstration car No. 1, carrying experts from the Federal government and our own men, qualified to solve any farmer's problems at his own farm, with instructions to stop when possible at every farm from five to twenty-five miles from a railway station, and at every point within that radius that promises a group meeting, and to show the inquirer what he wants to know. A good roads man from the Federal office it is hoped will be carried along, who will accom-

plish more than all the bulletins that can ever be distributed from Washington or from any other source. The use of the gasoline tractor on the farm is likewise to be explained to the masses of the people, taking the place of animal power.

"Nowhere in the world up to this hour has such a far-reaching scheme been planned and put into execution. I have consulted with the head of the United States Farm Demonstration work, who will personally be with the car for the first week, and others, and all without exception pronounce it the most advanced step that has ever been taken in agricultural development work. As far as I am concerned I am so convinced of the far-reaching results in dollars and cents, and the resultant addition to the wealth of the State, that I am willing to make the far-reaching move. It is a departure from the usual methods, but the times are changing rapidly. Farmers are buying and using cars in their business and they know their value. If by the expenditure of a few hundred dollars the State can even stand a good chance of reaching the four-fifths of the agricultural population not being reached today, I feel that it is well warranted in making the effort at least. In this way the same men who under present conditions speak to from 50 to 250 people a day at one point can speak to thousands at 20 different points, in one day, and I am one of those who believe in seizing every opportunity that science or anything else offers to reach the producer who needs to be reached. That's why this scheme has been launched, and that's why I expect to see it bring far-reaching results."

The motor car being used is the latest model "K" Special of the Oakland Motor Car Company of Pontiac, Mich., a foredoor car of 40 H. P., and is equipped with all appliances necessary for cross country work. The manufacturers of this car, as soon as the first suggestion of this campaign was made, communicated with the Department of Agriculture direct, as well as through their State agents. The Oakland people realized from the first the great value of the proposed method of campaign and undertook to co-operate with the authorities to make the campaign successful.

SEED INSPECTION WORK.

Seed inspection work under the Act of 1909 could not be entered upon until late in the season of 1910, owing to the fact that it was necessary to put in special apparatus at the laboratories, and

throughout we have been hampered for the lack of funds with which to fully operate the law. However, in the summer of 1910 the laboratory got into working shape and an extra skilled assistant was employed to devote his attention to the seed work. The work has been steadily going forward since that time. In the fall of 1910, when the great danger from anthracnose in cotton seed became so apparent, the State Experiment Station detailed an expert inspector, who visited all of the seed houses in this State and those doing business in this State from without the State. He acquainted all of the seedsmen with the provisions and requirements of the law and drew quite a large number of samples. He also drew a large number of samples in the open market in this State and each sample was given a careful test. A large number of seeds were ruled out of the State and ordered off the market, because of low germinating power or of adulterants and impurities. In one instance, in the case of a certain seed farm inside the State, we found the entire farm was infected with anthracnose and the entire output for the season was ordered off the market, and the inspectors saw all of the seed taken to a cotton seed oil mill and reduced to meal and oil. In this one instance alone, probably many thousands of dollars of damage to the coming crop was saved to the growers and a general scattering of this bacterial disease all over the State was averted. I must say, in justice to the proprietor of the seed farm, that he did not know that his seed were infected and as soon as the discovery was made he was quick to act with the authorities in destroying any element of danger that might result.

This spring this division has examined a considerable quantity of corn seed and all seed for other crops. In some instances where growers of good varieties of corn had already distributed seed and found to be of low germinating power, the seed were ordered destroyed and the seedsmen made the shipment good in each case with first class seed. This fall we expected to do more effective work than before, for we were equipped for it now and the laboratories were in a position to handle the business, but there was no inspection fund available. We have made no distinction, so far as the open market is concerned, between home houses and out of the State houses.

There are some very slight changes in the law that should be made, but they relate principally to percentage of impurities and things of that kind. The law in the main has proven satis-

factorily and can be made to work to the material benefit of all parties concerned. The greatest difficulty, of course, is the lack of funds for operation, but this I hope may be cured by means of income from another division of the Department, which, under legislative authority, can be diverted to meet the necessary expenses, or by amendment providing an inspection tax. I would suggest a provision in this regard similar to that in the Tennessee law.

NEED FOR HOME SUPPLIES.

Estimated amounts annually 1910-11 sent outside the State for products that can be raised at home:

For horses and mules.. . . .	\$11,350,000 00
For bacon, etc..	13,000,000 00
For dairy products	12,000,000 00
For flour.. . . .	20,000,000 00
For corn.. . . .	6,000,000 00
For other commercial feed stuffs	3,000,000 00
For hay.. . . .	2,000,000 00
Oats.. . . .	1,000,000 00
	<hr/>
	\$68,350,000 00

In the above estimate no account is taken of the immense amount of canned goods, Western meats or other human food such as catsups, soda crackers, syrups, etc., that are annually purchased from other States by our people. This estimate is a conservative one. All over the State this Department has endeavored to impress the people with the seriousness of this drain upon their resources, and there seems to be an awakening on the subject.

II—LIVE STOCK.

The State Department of Agriculture has always been deeply interested in the live stock industry of the State and has earnestly sought to aid the farmers in improving the existing conditions in every way possible, chiefly for the vital reasons indicated by the foregoing figures.

The Department has made most strenuous efforts during this year to bring about a rapid development of the industry in its various branches, particular attention being given to the beef

cattle, hog raising and sheep raising, with a view to reducing to some extent the immense amount of money now being sent outside of the State for meat for food purposes. All over the State the doctrine of raising home supplies, accompanied by the slogan of the State Live Stock Association, "more live stock and better live stock," has been proclaimed by representatives of this Department, and all other interests working for the upbuilding of the cause of agriculture in the State. There has been during the year noteworthy developments in the branches of the industry indicated.

The enforcement of the Commercial Feed Stuffs Act has had a vitally important bearing on the undertaking.

The chief obstacle to cattle raising has been most forcibly presented recently in the following letter from Dr. Nighbert, who has also taken up this matter with the Governor of the State, and others; the letter speaks for itself, and though no authority is vested in this Department in this branch of work I would most earnestly commend the suggestions made to the careful consideration of the General Assembly.

UNITED STATES DEPARTMENT OF AGRICULTURE, BUREAU OF ANIMAL
INDUSTRY, LOCAL OFFICE.

210 Federal Building, Atlanta, Georgia, Jan. 8, 1912.

Hon. E. J. Watson, Commissioner of Agriculture,
Columbia, South Carolina.

Dear Sir: I desire to call attention to the co-operative work of this bureau with the State officials and citizens in your State toward relieving the situation and condition regarding cattle raising, feeding and marketing. At present the entire State of South Carolina is quarantined on account of splenetic fever of cattle, except four counties. This condition makes cattle breeding and feeding hazardous and deprives your citizens of the best markets of the country.

This condition discourages the cattle business in the State from every standpoint. Splenetic fever of cattle is transmitted and caused by the common cattle tick. This tick is easily eradicated from the entire State. Four counties, viz: Oconee, Pickens, Greenville and Anderson, have been freed of the tick and released from quarantine. This territory is recognized by the Federal government. Eight other counties and parts of counties, viz: Spartanburg, Cherokee, York, Chester, Union, Laurens, Greenwood

and Abbeville, have been freed the last year and approved for release from quarantine the coming spring.

It is with a good deal of pleasure I recall meeting you at Gaffney, South Carolina, where you addressed a meeting of farmers in company with Congressman Lever, during the spring of 1910. It seems to me there will never be better opportunity to bring this subject of the eradication of the cattle tick before the people and urge early action on their part in order that the work may be completed at the earliest date possible.

Owing to the fact that it has been plainly demonstrated in your State that this work is feasible, I am now negotiating with other State officials and citizens interested urging the movement to take this work up over the remainder of the State. In other words, I urge a Statewide campaign against the tick.

There will be a meeting of the South Carolina Live Stock Association at Columbia on February 8 and 9. Can you not meet with us in order that the matter may be thoroughly discussed? You well understand and know that a cattle industry must be fostered and encouraged in any form of agriculture. The work of tick eradication has long passed the experimental stage; it is today strictly a business proposition and should be handled as such, because it will pay. It may not be possible to conduct active work in the entire State now, but a general educational campaign should be inaugurated in each county, by first promulgating an order prohibiting the movement of tick infested cattle on the public highway and prohibiting transportation of such cattle in any way within the State. There are ways to do this without great inconvenience or expense, simply by placing greater responsibility on persons who desire to deal or traffic in cattle.

The work of tick eradication is far reaching and it will pay to complete the work at the earliest possible date, in order that breeders and feeders and the people generally may receive the benefit of a free and unrestricted cattle traffic and a chance to improve home cattle. Every calf dropped in the presence of tick sufferers from splenetic fever and is stunted in growth throughout its life, for that reason such cattle are never profitable for the dairy, the feed lot or the butcher's block.

The main idea prevailing with the South Carolina planter is to feed cattle from 90 to 120 days in winter, mainly for the manure produced; that plan is probably profitable, simply from a ferti-

lizer standpoint, but most feeders are better satisfied when they get at least all cash back when the cattle are sold.

The losses under the above plan, financially, have in the past been enormous and will continue as long as splenetic fever and the quarantine restrictions are present, because the market price of all cattle that are below the National quarantine line is at a low rate, no matter what the quality, and this price prevails right at the home markets, even if the cattle compare favorably in quality with cattle on the markets above the line. So there you are—good cattle selling lower than the same quality of cattle in the best markets of the country, all on account of the quarantine restrictions. Can this situation and condition be relieved? No, not until the cattle ticks have been eradicated in every county and the territory released from quarantine and so recognized by the United States government.

The reasons for this are simple. Cattle of the infested area, quarantined on account of splenetic fever, which is transmitted by the common cattle tick, when sold either at home or on the best markets of the country at large, are sold as "exposed," "infested," "Southern," or "quarantined" cattle, and the price is fixed lower because the cattle shipped interstate to the best markets of the country must be sold for immediate slaughter, or held and treated under rigid restrictions, which adds expense. The home buyer knows these points as well as the buyers at the big markets and takes advantage of them when good cattle are presented for sale at home.

This feature of the business discourages the winter feeder, because he is knifed from two sides. The South Carolina feeder, in order to get a good grade of cattle that he may feed profitably, must go above the quarantine line in territory already freed of ticks to purchase them, then he pays above the line price. The seller above the line has the advantage, he can ship his feeders anywhere to the best markets without restrictions, or sell to a good advantage at home, so he does not care a snap for the South Carolina feeder's business. The South Carolina feeder is stung by paying a long price and selling on a short one. Remember, now, it makes no difference how good our cattle are in South Carolina, so long as the tick is present and the quarantine is on, they will sell for a low figure, the difference in price being from one-fourth to one and a half cents per pound in favor of the cattle above the line.

It is now time that the people should act, and it is believed that through your sympathy, moral and active support would be a mighty factor in making these points well understood. When these points are once well understood, it will be an easy matter to convince the General Assembly and others interested of the importance of enacting more suitable laws that will protect the South Carolina planter, cattle breeder and feeder—larger appropriations would then be available.

The completion of this work will save the State thousands of dollars, and at the same time give all interested encouragement in feeding and breeding cattle. It makes no difference what the work of tick eradication costs, the early completion of the work will return over and over every dollar spent.

I would be pleased to have the honor of hearing from you and an opportunity to confer with you further on this subject.

I am, very respectfully,

E. M. NIGHBERT,
Inspector in Charge.

Shortly after the above letter was received the following reached the Commissioner of Agriculture, and is incorporated herein owing to its importance, it being estimated that South Carolina is losing annually one million dollars because of defects in the present law:

UNITED STATES DEPARTMENT OF AGRICULTURE.

BUREAU OF ANIMAL INDUSTRY,
LOCAL OFFICE,

210 Federal Building,

Atlanta, Ga., Jan. 12, 1912.

Hon. E. J. Watson, Commissioner of Agriculture, Columbia, S. C.

Dear Sir: Referring to your letter of the 10th inst., you are at liberty to use my letter of the 8th instant to the best advantage. Inasmuch as you expect to incorporate same in your official report to the General Assembly, I deem it urgent to inform you of the inadequate law under which the work of tick eradication has progressed the past few years in the State of South Carolina. I am urging a change in this law and hope

that my suggestions are not too late for you to supplement your report with this letter.

The present law gives authority to enter premises and quarantine animals infested with or exposed to the fever tick, but *does not authorize enforcement of disinfection of such animals*, therefore it is readily observed that the work is at a disadvantage and enormous sums of money and time are wasted. Experience has shown that it is an easy matter to get at least fifty to sixty per cent. of the owners of ticky cattle and premises to free same without any trouble in the shortest time possible, the remaining individuals must be time and time again visited, persuaded, coaxed or forced to do the work. This condition prolongs the work three or four years that could be completed within twelve to eighteen months.

Experience has also demonstrated the importance of securing local funds from the County Treasury or private funds from various individuals or associations. This brings the work closer home and establishes an interest and local responsibility.

The following suggestions are essential in a law in order that the work may be done properly and expeditiously. I urge and recommend the following points:

1. To whomsoever the authority and power is conferred to execute law and regulations for the control, suppression and eradication of infectious, contagious and communicable diseases of live stock within the State, the legislative act should plainly define such authority and power covering in detail as far as possible each step in the general provision pertaining to such diseases of live stock.

2. Counties, cities and towns, through boards of health or county commissioners, or other county officers, should be authorized under the law to appropriate funds and adopt such rules and regulations in accordance with the general State law, to protect the health of live stock and the general welfare of the live stock industry in their respective counties, districts or communities.

3. The legislative act should provide for enforcement of disinfection of animals and premises, stating plainly the method of applying materials recognized and approved, with limit in completing the work and penalty if not complied with. Owners or keepers of animals must adopt one or other of approved methods on official notice.

4. The owner of premises, the owner or keeper of exposed or diseased animals, should be held responsible individually and jointly for control of such animals, defining the responsibility, with penalty of law if not complied with.

5. Authority to enter premises, inspect animals and quarantine same, with penalty should such officer be interfered with in any way in executing his official duties. Manner of service of quarantine notice should be defined.

6. Regulations of the Secretary of Agriculture of the U. S. Department of Agriculture, governing the inspection, disinfection, certification, treatment, and manner and methods of delivery and shipment of live stock, which is the subject of interstate commerce, should be recognized and adopted, covering interstate shipments into the State. Federal employees should be authorized and commissioned, without pay, under the State law, in order that complete co-operation may be established between the State and Federal Government.

I thank you, Sir, for your interest in this matter, and hope that you will be able to incorporate the above suggestions in a supplementary report to the General Assembly.

Very respectfully,

E. M. NIGHBERT,

Inspector in Charge.

TICK ERADICATION.

Dr. M. Ray Powers, the State Veterinarian, gives some interesting data as to the progress of tick eradication work in South Carolina and announces the release of considerable additional territory this winter.

Dr. Powers writes: "Tick eradication has been in progress in the following counties of South Carolina since 1907 and 1908: Oconee, Greenville, Pickens, Anderson, Greenwood, Abbeville, Union, Chester, Cherokee, Spartanburg, Laurens and York. Counties of Oconee, Pickens, Greenville, and Anderson were released from Federal quarantine about two years ago and we expect the release of all other counties above mentioned (with the exception of that part of Abbeville County south of the Southern Ry., that portion of Chester County east of the Southern Ry., and that portion of York County south of the Southern Ry.) during December, 1911."

Federal Census Statistics.

The U. S. Census Bureau's advance summary of South Carolina live stock statistics was issued on Sept. 19 last, and is as follows:

Statistics relative to the domestic animals, poultry, and bees reported on farms and ranges for the State of South Carolina at the Thirteenth Decennial Census, April 15, 1910, are contained in an official statement issued today by Census Director Durand. It is based on tabular summaries prepared under the direction of Dr. Le Grand Powers, chief statistician for agriculture, in the Bureau of Census. The figures are preliminary and subject to slight revision later, when the results from a few other farms, whose returns are now incomplete, are included in the final tables. It is not expected that these additions will materially modify the amounts or rates stated herein. Special attention is called to the fact that the present statement relates only to live stock on farms and ranges and does not give the figures for the cities and towns of the State.

AN AGGREGATE INCREASE OF \$24,831,000.

The aggregate value of all domestic animals, poultry, and bees reported in 1910 was \$45,031,000, as compared with \$20,200,000 in 1900; the amount of increase being \$24,831,000, and the rate 122.9 per cent.

The total value of the domestic animals was reported as \$43,690,000 in 1910, as against \$19,167,000 in 1900; the increase amounting to \$24,523,000, or 127.9 per cent.

The poultry were valued at \$1,207,000 in 1910, as compared with \$890,000 in 1900; the gain being \$317,000, or 35.6 per cent.

The bees were valued at \$135,000 in 1910, and \$143,000 in 1900; a decrease of \$8,000, or 5.6 per cent.

INCREASES AND DECREASES OF DOMESTIC ANIMALS, BY CLASSES

Mules and colts had a greater value than any other class of domestic animals both in 1910 and in 1900. Their total value in 1910 was \$23,771,000, while in 1900 it was \$8,416,000, an increase of 182.5 per cent. The total value of horses and colts in 1910 was \$10,123,000, as compared with \$4,847,000 in 1900, an increase of 108.9 per cent. Next in order in 1910 were cattle, with a total value of \$7,076,000, as compared with \$4,335,000 in

1900; an increase amounting to 63.2 per cent. The total value of swine in 1910 was \$2,549,000, while in 1900 it was \$1,412,000; an increase of 80.6 per cent. Sheep and lambs in 1910 were valued at \$81,000, as compared with \$112,000 in 1900. This was the only decrease in any class of domestic animals and amounted to 27.5 per cent. Asses and burros in 1910 were reported as valued at \$61,700, as against \$22,400 in 1900; the increase amounting to 176.1 per cent. Goats and kids in 1910 were valued at \$27,600, as compared with \$24,500 in 1900; an increase of 13 per cent.

Horses and mules in 1910 constituted 75.3 per cent. of the value of all live stock; cattle, 15.7 per cent.; swine 5.7 per cent.; poultry, 2.7 per cent.; bees, 0.3 per cent.; sheep and lambs, 0.2 per cent.; and asses and burros, and goats and kids, each 0.1 per cent.

NUMBER OF FARMS REPORTING EACH CLASS.

The total number of farms in the State in 1910 was 176,180. Of these, 92.3 per cent., or 162,610, reported domestic animals; 69.1 per cent., or 121,729, reported swine; 68 per cent., or \$119,855, reported cattle; 55.4 per cent., or 97,684, reported mules or mule colts; and 33.2 per cent., or 58,526, reported horses or colts. Only 1.8 per cent., or 3,171, reported goats or kids; 1 per cent., or 1,721, reported sheep or lambs, and 0.1 per cent., or 227, reported asses or burros.

NUMBER, AGES, AND AVERAGE VALUES OF DOMESTIC ANIMALS, BY CLASSES.

The total number of cattle reported in 1910 was 388,865. Of these, 180,560 were dairy cows, the total value of which was \$4,713,000, and the average value, \$26.10. The number of farms reporting dairy cows was 109,029, or 61.9 per cent. of the total number of farms in the State. On the other hand, cows not kept for dairy purposes numbered 65,111, and their average value was \$14.61. These cows were reported by 25,408 farms, or 14.4 per cent. of all farms. The average number of dairy cows per farm reporting was less than 2, while the average number of cows not kept for milk, per farm reporting that class, was about 3. Yearling heifers—that is, heifers born during the year 1909—numbered 51,545; average value, \$8.80. Mature steers and bulls, born before 1909, were 21,360 in number; average value, \$24.96. Yearling steers and bulls, born in 1909, numbered

21,027; average value, \$8.91. The total number of spring calves born in 1910 was 48,221, and the average value, \$4.66. It may be noted that the census of 1900 showed a larger number of calves, namely, 87,734. This difference is due to the fact that the census of 1900 was taken as of date June 1, after all the spring calves were born, and the group "Calves" included all cattle less than 1 year of age, so that the number of calves was greater than in 1910, when the census was taken as of April 15, and only "Calves born in 1910" were included in the comparative group. In spite of the younger age of the calves in 1910, the average value per head was \$0.54 greater than in 1900. There were also reported 1,041 cattle, not classified by age or sex, having an average value of \$12.38.

The total number of mules and colts reported in 1910 was 155,106. Of these, adult mules born before 1909 numbered 154,441, and their value was \$23,728,000, and average value, \$153.64. Only 528 yearling colts, which are colts born in 1909, were reported, and their average value was \$71.22. Spring colts, born in 1910, were 137 in number, and their average value was reported as \$38.47. There were 399 asses and burros reported, with a total value of \$61,700, and average value of \$154.66.

The total number of horses and colts in 1910 was 79,676, which is about one-half of the number of mules and colts. Of these, 76,807 were classed by the census as mature horses—that is, horses born before 1909, and their value was \$9,949,000, an average value, \$129.53. Yearling colts born in 1909 numbered 2,129, having an average value of \$68.86. Only 740 colts, born in 1910, were reported, and their average value was \$37.93. It may be noted that only 0.4 per cent. of the farms of the State reported spring colts.

The total number of swine in 1910 was 664,475, of which nearly two-thirds, or 421,417, were classed as "hogs born before 1910." The total value of these was \$2,155,000, and the average value, \$5.11. The spring pigs, born in 1910, numbered 243,058, and their average value was reported as \$1.62.

The total number of sheep and lambs reported for 1910 was 37,433. Of these, 22,294 were mature ewes born before 1910, and their total value was \$51,600, or an average of \$2.31. This total value was nearly two-thirds of the total value of all sheep and lambs. Rams and wethers numbered 5,537, and the aver-

age value was \$2.26. Spring lambs were 9,602 in number, and their average value was given as \$1.76. The number of spring lambs was 43.1 per cent. of the number of ewes. There were 24,676 goats and kids reported, having an average value of \$1.12.

POULTRY STATISTICS.

The summary on poultry shows that the total number of farms reporting the different kinds in 1910 was 146,855, the total number of fowls being 2,946,414, and the total value, \$1,207,000.

Of the total number of farms reporting poultry, nearly all, or 146,487, reported chickens, numbering 2,694,970, valued at \$1,036,000; 19,454 reported turkeys, numbering 64,396, valued at \$96,700; 3,633 reported ducks, numbering 15,653, valued at \$7,489; 8,125 reported geese, numbering 59,664, valued at \$32,200; 16,166 reported guinea fowls, numbering 83,152, valued at \$28,200; 1,358 reported pigeons, numbering 28,378, valued at \$5,529; and 69 reported peafowls, numbering 201, valued at \$534.

Of the whole number of farms in the State, those returning chickens were 83.1 per cent.; turkeys, 11 per cent.; guinea fowls, 9.2 per cent.; geese, 4.6 per cent.; ducks, 2.1 per cent.; pigeons, 0.8 per cent., and peafowls, less than one-tenth of 1 per cent. The reported increase in the value of poultry on South Carolina farms in the 10 years, 1900 to 1910, was 35.6 per cent., but the increase in the total number of fowls was only 1.3 per cent. The number of farms reporting poultry increased 14,454; thus the number of fowls per farm reporting decreased from 22 to 20.

NUMBER AND VALUE OF COLONIES OF BEES.

The number of farms reporting bees decreased from 16,272 in 1900 to 12,528 in 1910, or 23 per cent. During the same period the colonies of bees decreased from 93,958 to 75,422, or 19.7 per cent., and the value, from \$143,000 to \$135,000, or 5.6 per cent.

A smaller relative decrease is found in the value of bees than in the number of farms reporting and the number of colonies. Only 7 farms in each 100 reported bees in 1910, while in 1900 they were reported by 10 farms in each 100.

III.—FARM DEMONSTRATION WORK.

Most conspicuous among the agencies making for the fullest development of the agricultural industry of the State has been the increased activities of the U. S. Farm Demonstration Work, conducted by Prof. Ira W. Williams, the State Agent.

It was particularly gratifying to the agricultural population of the State, that the General Assembly at its last session appropriated \$10,000 with which to supplement the funds of Dr. Knapp's office and extend the work in the State. The expenditure of this money was put jointly in the hands of Prof. Williams and the State Commissioner of Agriculture, and it has been used as judiciously and advantageously as possible. Appended to this report will be found an itemized statement as to how the money was expended.

Owing to the State's connection with the work and the fact that the field operations have been conducted by Mr. Williams, he has filed with this Department the following report for incorporation in this report for submission to your Excellency and the members of the General Assembly.

STATE AGENT'S REPORT.

Columbia, S. C., Dec. 13, 1911.

Hon. E. J. Watson, Commissioner of Agriculture, Columbia, S. C.

Dear Sir: At your request for your annual report I am sending you, herewith, brief statement of the Farm Demonstration Work in South Carolina.

We have employed this year in the State fifty agents, one for each County in the State except Beaufort, two district agents and a State Agent, with some additional work in Lexington, Richland, Fairfield and Clarendon Counties. These Agents have under their supervision about 3,000 demonstrators and co-operators located in the different sections of their county. The results of their work this year on the plots for demonstration purposes have been beyond expectation, considering the fact that it was a dry year for corn.

The demonstrators have, in almost every instance, succeeded in making large yields and have succeeded in making profitable corn crops. Notwithstanding the drought, in my opinion, more corn will be made in South Carolina this year than in any previous year, because better methods of cultivation have been extended over so much greater area, which has heretofore been given to poor methods producing very much lower yields.

The production of cotton has been excellent. All the record books, however, have not been received, but the indications show more than satisfactory results. The important feature about the demonstration work proper is that most all of the demonstrators, as well as a large number of other people, have begun to follow the demonstration methods on their entire farm.

We are insisting strongly on a rotation of crops, the sowing of small grain, and the reduction of the cotton acreage—by this means building up the soil so that the enormous amount of commercial fertilizer as now purchased will not be needed, or if used at all will bring far greater results. It is estimated by the Department of Agriculture that, at least, one-third of what we pay for commercial fertilizer is lost. With a good system of crops, raising of corn, oats and peas along with cotton, we will not only be able to produce larger crops per acre, but will be able to produce them very much cheaper than at the present time.

The Boys' Corn Club work this year, at the request of Clemson College, has been conducted by Prof. C. B. Haddon in co-operation with the College.

The Girls' Tomato Club work, which has been extended considerably the past year, has been placed in co-operation with Winthrop College. One girl produced 900 cans on one-tenth of an acre, thus surpassing the record of Katie Gunter. The General Education Board has been so encouraged by this work that

they have appropriated money with which to finance the work very much more successfully than in the past.

One agent, Mr. J. L. Carbery, has been employed to do garden work among the mill village people. This is a work very much needed and a work that has accomplished a great deal of good towards helping these people create a better living for themselves and to save some money, as well as give them a greater encouragement along the lines of their life work. I have met the clubs and aided in the work in whatever way possible and have seen the wonderful results therefrom. The work is being paid for out of the funds appropriated by the State. It is hoped that Congress will take up this question and make an appropriation for this class of people who have heretofore not received any direct aid by either the State or the Nation. Mr. Thomas F. Parker has given great co-operation along this line and the work has been done in connection with the Monaghan Mill, using this mill in attempting to work out a definite system to be used in all the mill villages.

The special demonstration farms, to show the quick development and possibilities of poor land, both in the Piedmont and Sand Hill sections, have been very successful. They have been of great benefit to the people in the surrounding countries and have gone beyond our expectations in the matter of results in so short a time. These are the farms of Thomas F. Parker, at Greenville, S. C., who pays all the expenses of the demonstration experimental work, and Thomas Hitchcock, at Aiken, S. C.

The farm at Aiken, which is said to be poor Sand Hill land, has demonstrated that good crops can be produced in wet and dry years both in corn and cotton. These farms should be visited by as many people as possible, in order that the striking results may be pointed out.

These farms have been no expense in any way to the Department.

Another work which has been carried on by the Department for the past two years is that of the production of a better staple cotton. Numerous instances have proven that as much cotton can be raised per acre with a good variety of staple as any other variety, and some of the mills in this State that have heretofore been buying cotton from Mississippi to supply their demand have informed me that they have not had to buy any more cotton from the West this year to use in their mills that

are making the finest goods. It is important to realize that these varieties of cotton cannot be raised carelessly. Numerous things must be taken into consideration. We hope in a very short time to issue a circular pointing out the good points in regard to the raising of this cotton.

Seed bred by Mr. D. R. Coker and Mr. R. C. Keenan have been giving the best results. The "Keenan" and the "Columbia" cotton have been bred by Mr. Keenan, the "Webber" and the "Hartsville No. 7" by Mr. Coker. The common Hartsville, in most cases, only gives $1\frac{1}{8}$ inch staple, and it seems that we should not encourage the raising of this grade, as $1\frac{1}{4}$ inch staple can be raised equally as well.

In all the Piedmont Counties, twenty-two in number, we have put in special grass demonstrations—five each in most counties. We hope to prove that equally as good grasses can be raised in this section of the State as can be raised in any other part of the country. The results of this we will be able to give out later.

As to winter cover crops there has been such a tremendous increase that it is impossible to point out, as we have in previous reports past, the number of acres that are being planted in these crops. Our farmers have learned by the experience of the past that a winter cover crop is one of the most helpful methods of handling their soil and checking the fertilizer bill. The work is on a substantial and sound foundation and is well organized. This work is calculated to continue to produce good results for some time to come. All of the agents are encouraging very much the introduction of better live stock—one of the most helpful adjuncts to Southern agriculture. Results from this line of work will be forthcoming in a very few years.

The Farm Demonstration Agents employed in South Carolina this year were as follows:

Antley, A. O., St. Matthews; Anderson, W. L., Ninety-Six; Alston, R. L., Georgetown; Baker, L. L., Bishopville; Barton, W. H., Simpsonville; Brown, E. A., Camden; Blair, J. R., Sharon; Bethea, A. M., Dillon; Baggott, J. O., Saluda; Cromer, Marie S. (Miss), Aiken; Cunningham, R. L., Chester; Carnell, F. W., Union; Cousar, H. N., Latta; Chappell, L. C., Lykesland; Carbery, J. L., Greenville; Derrick, G. A., Lexington; Duncan, S. M., Newberry; Dusenbury, Chas., Conway; Elliott, W. R., Winnsboro; Epps, T. O., Kingstree; Harrell, A. S., Brun-

son; Holland, M. G., Walhalla; Harris, J. W., Spartanburg; Harman, J. W. P., Aiken; Harrell, N. R., Darlington; Lever, W. T. J., Blythewood; Lott, P. N., Johnston; Lambert, J. H., Marion; McFaddin, C. A., Manning; McManus, C. L., Lancaster; Rothrock, J. W., Pendleton; Reid, S. F., Abbeville; Stewart, W. P., Greenville; Smith, D. L., Walterboro; Summers, J. A., Springfield; Shealy, J. W., Ballentine; Tarrant, D. L., Springfield; Tiller, W. J., Chesterfield; White, R. D., Alcolu; Williams, J. F., Sumter, R. No. 3; Williams, J. A., Dacusville; Woodley, J. A., Tatum; Willis, H. E., Florence; Welsh, S. N., Elliotts; Watts, Jno. D. W., Laurens.

Respectfully submitted,

IRA W. WILLIAMS,

State Agent.

CHANGE FOR THE FUTURE.

Just as this report was ready to go to the printer the following letter, which is self-explanatory, was received by the Commissioner of Agriculture:

Washington, D. C., Jan. 8, 1912.

Hon. E. J. Watson, Commissioner of Agriculture, Columbia, S. C.

Dear Col. Watson: At this time I desire to thank you for the many kindnesses received in the past, and for the hearty co-operation which the Farmers' Co-operative Demonstration Work has received from the people of South Carolina, through the appropriation extended for the past two years to your Department. At the same time I desire to announce that arrangements have been perfected which will do away with the necessity of any further appropriation. The activities of the Farmers' Co-operative Demonstration Work are, and have always been, largely educational in their nature. Recently arrangements have been perfected with Clemson College for active co-operation between the extension forces of the College and our forces. This co-operation will be not only of a close personal nature, but will result in the financial support of the work by the College. This arrangement has been entered into with the sole desire on the part of the College and the Farmers' Co-operative Demonstration Work to render the greatest possible service to the farmers of the State of South Carolina.

Again thanking you, and trusting that the State Department of Agriculture will continue to work in accord with all of the agricultural forces of the State of South Carolina, I remain,

Very truly yours,

BRADFORD KNAPP,
Special Agent in Charge.

Before the receipt of this letter, the recommendation made herein that any appropriation made for support of this would in the future be placed directly under the control of the Washington authorities had been incorporated in this report.

This Department I wish to say, however, is in no wise responsible for this change. Throughout the heartiest co-operation has been given and the management of all the work done in this State has been left to the authorities of the Demonstration Work. I trust that under the new arrangement the success that has always attended this work will continue.

IV.—FARM MANAGEMENT.

The Office of Farm Management of the U. S. Bureau of Plant Industry has pursued its policy of former years in South Carolina by continuing its investigations of agricultural conditions, finding the defects and devising plans for remedying them with the ultimate aim of establishing successful systems of farming. In caring for the soil, and increasing the growth of forage, the work with leguminous crop has been an important part. The tests made over a period of three years has shown that vetch for all conditions is superior to the clovers for a winter cover crop. Consequently, efforts have been made to extend its culture as much as possible. There are now over a thousand fields in the State and wherever the special requirements for planting have been provided, successful results have been obtained. This crop should be grown more extensively in the State. Inoculation and planting at the proper time are necessary. Only the hairy vetch should be used, unless under special conditions. Yields of from one to three tons per acre are common.

Work with alfalfa has progressed. Alfalfa can be grown on all ordinary soils in South Carolina. Failures are due to lack of knowledge in growing the crop. As to whether it is an economic proposition must be left for the farmers to decide.

The drainage work has borne satisfactory results. The State is poorly drained and must make greater use of the new drainage law and put in more tile before agriculture can develop much further. The Office of Farm Management inaugurated the drainage campaign nearly two years ago, which led to the enactment of the drainage law, greater use of tile and the establishment of a tile factory at Bowman.

The corn breeding work has been continued and good results obtained. Seed taken from one of the breeding plots on the Taylor farm produced the best fifty ears from South Carolina shown at the South Atlantic Corn Exposition.

Farm Management Work has been carried on with nine farmers. The use of improved machinery, rotation of crops, drainage, better fertilization, and generally improved methods in farming have been valuable object lessons to the surrounding community.

The Experiment Farm at Aiken has shown the possibilities of Sand Hill land. This farm has been conducted for two years and the experimental evidence being obtained in the rotation of crops, use of barnyard manure, deep and shallow plowing, various fertilizers as a source of phosphorus, etc., will be of great value to the farmers when further use is made of it.

Thirty-five talks have been made at farmers' meetings.

Material has been obtained and a manuscript submitted for a circular on vetch which will appear in the near future.

These and other things too numerous to mention have constituted the work of the Office of Farm Management in South Carolina during 1911.

V.—CORN BREEDING AND EXPOSITION.

The South Atlantic Corn Exposition opened its doors to the general public for the second time at Craven Hall in Columbia, December 11 to 16. It is impossible to conceive the wonderful benefit this great institution has been to South Carolina, and the South. First made possible by an appropriation of \$1,000 from the General Assembly, it organized the first Corn Exposition ever held south of Mason and Dixon's line. This attracted national interest, and has done much to advertise the agricultural possibilities of South Carolina throughout the country. It was directly due to this Exposition that the great National Corn Exposition consented to come to Columbia in 1913, and follow-

ing the lead of South Carolina, Georgia held an all-Southern Exposition in Atlanta, December 4 to 8 of this year.

The second South Atlantic Corn Exposition received a legislative appropriation of \$3,000 to aid it in its work. This was supplemented by nearly \$5,000 from various agencies, including manufacturing concerns, fertilizer companies, etc. North Carolina, South Carolina and Georgia were made eligible to entry. Competitive samples of carefully selected corn were sent from these three States, there being over twelve hundred entries from eight hundred exhibitors. The object of the Corn Exposition is to improve the quality of the corn by breeding and selection. No one had any idea that such great improvement could be made in one year's time as was shown in the corn exhibited at the second Exposition. In every way it was far superior to that shown at the first.

Two corn judges of national reputation were secured to judge the sweepstakes and grand champion prizes. One of these was L. B. Clore, of Franklin, Indiana, who not only is recognized as the best corn judge in the world, but has made a great reputation as an exhibitor, having in the last three years won over \$10,000 in prizes at Northern shows. The other was W. H. Young, of Athens, Ill., one of the founders of the Illinois Corn Breeders' Association, and a leading grower of pure bred corn. The work of these two men was a revelation and an education to the farmers. Both stated that the market condition of the corn exhibited was the best of any show at which they had judged this year.

A high class programme, dealing with practical agricultural subjects, was given. The speakers included Miss O. I. Tillman, of the North Carolina Agricultural College; H. W. Barre and A. F. Conradi, of Clemson College; D. R. Coker, of Hartsville, S. C.; L. B. Clore, of Franklin, Ind., and C. H. Kyle and Bradford Knapp, of the Federal Department of Agriculture. In addition to these J. N. Napier, of Clemson College, conducted a Corn Judging School. These things were of great educational value to the farmers.

So efficient and effective has been the work of the South Atlantic Corn Exposition, it has met with the hearty approval of the Federal Department of Agriculture, and it has consented to detail a man who will devote his time to corn breeding and

corn improvement work in South Carolina. This in itself is worth all the effort used in developing the Exposition.

The legislative commission, consisting of A. D. Hudson, Newberry; E. J. Watson, Commissioner of Agriculture; D. N. Barrow, Clemson College; L. L. Baker, Bishopville, and W. R. Perkins, Clemson College, worked faithfully to make the Exposition a success, and feels that the State has received more than abundant returns for the money it has appropriated for organizing and conducting the Corn Exposition.

VI.—STATE CORN CONTEST.

The Fifth Annual State Corn Contest has again demonstrated the possibilities of South Carolina as a corn-growing State. While the yields were not as high as last year, owing to unseasonable conditions, yet excellent results were obtained in the men's five-acre contest, and both the men's and boys' one-acre contest. The winners with the yields, profits and score on points are shown in the accompanying table:

Name and Contest.	Rank.	Prize.	Yield Per Acre.	Profit Per Acre.	Points.						
					Purity and Selection of Seed.	Method of Culture.	Report.	Yield.	Quality of Crop.	Profits.	Total Points.
Five-Acre Contest—Men's.											
A. W. Gilmore, Santuc...	1	\$100	96.7	111.10	6	25	14	25	9	15	94.
J. A. Shanklin, Manager Taylor Plantation, Cola.	2	50	80.6	92.48	7	25	14	20.8	9	12.7	88.5
O. W. Josey, St. Charles...	3	30	46.2	43.28	7	25	14	12.	9.5	6	78.5
E. E. Ritter Cope.....	4	20	65.6	64.65	5	20	13	17	7	8.9	70.9
One-Acre Contest—Men's.											
Guy H. Norris, Anderson...	1	100	113	82.56	7.5	20	15	25	9.5	13.6	93.
J. Swinton Whaley, Edisto Island	2	50	88.38	91.80	5.5	23	14	20	7.5	15	86
Z. T. Davis, Greenwood....	3	30	110.6	96.95	6	20	11	17	8	14.4	84.4
E. E. Ritter, Cope.....	4	20	64	71.10	5	25	14	14.5	7	12	77.5
One-Acre Contest—Boys'.											
Jerry H. Moore, Mars Bluff	1	50	164.46	125.00	6.5	18	7	25	8	15	79.5
Douglas Glenn, Lancaster...	2	25	57.00	46.10	5	20	7	8.5	7	5.6	53.1
Yancy Mathis, St. Charles.	3	15	51.3	15.09	5	17	14	8	7	1.8	52.8
Turner Weasinger, Blythe- wood	4	10	60.00	55.00	2	15	10	9	4	6.6	46.6

A. W. Gilmore of Santuc won the men's five-acre contest with a yield of 97.6 bushels per acre, a profit of \$110.10 per acre, and a score of 94. Guy H. Norris, Anderson, won the men's one-acre contest with a yield of 113 bushels, a profit of \$82.56 and a score of 93. In the boys' acre contest, Jerry Moore again dem-

onstrated his capabilities as a corn grower and won with a yield of 164.46 bushels, a profit of \$126, and a score of 79.5.

An examination of the corn was made in the State Feedstuffs Laboratory, and it was found that it was equal or superior in quality, as far as acidity was concerned, to the best corn shipped in from the North. Also the corn analyzed well up in protein, which means a high feeding value. All the samples of corn sent in were free from excess moisture, showing that the corn was well matured before harvesting. A list of some of the growers, showing the moisture content, per cent. of protein and acidity of their corn, is given herewith:

	Moisture.	Protein.	Acidity.
John Foxworth, Cades.	11.30%	8.02%	15c.c.
L. McAfee, Chester.	9.28%	7.45%	11c.c.
Carl McMurray, Lancaster.	10.78%	9.86%	12c.c.
Archie Cook, Columbia (Alexander six-ear)	12.5%	9.21%	9c.c.
Yancy Mathis, St. Charles, (Gar- rick's Prolific)	9.70%	8.55%	9c.c.
Claud R. Adams, Gibson.	11.15%	9.30%	12c.c.
Douglas Glenn, Lancaster.	12.32%	10.30%	20c.c.
J. A. Shanklin, Columbia.	9%	9.16%	6c.c.
Jerry Moore, Mars Bluff, (Batt's Prolific)	11.80%	9.69%	11c.c.
C. W. Josey, St. Charles (Josey's Improved)	11.15%	8.77%	10c.c.
McLaurin Lester, McColl (Marl- boro)	10.60%	8.99%	10c.c.
H. B. Floyd, Jr., Floydale.	10.50%	8.51%	11c.c.

These analyses indicate that a good quality of corn can be grown in South Carolina.

Some valuable lessons have been learned from this year's contest. In the first place, the competitors should realize that unless they make the proper entry, fill out the manual, and send a sample of their corn to this Department, no prize can be awarded them. Some have sent in the manual without the corn, and some have sent in the corn without the manual. It is the one who makes the highest score and not necessarily the one who makes the highest yield that wins, although it is usually

found that the man who makes the highest yield is careful in all things.

Farmers should not try to deceive themselves nor the Commissioner in making the measurement of the corn. The best way is to wait until the corn is well matured before harvesting, then shuck all the corn clean and weigh, not leave the husk on or merely measure in a basket or barrel. After the corn is all weighed, a sample of not less than one hundred pounds should be taken and shelled and the percentage of shelled corn calculated with this, the amount of shelled corn per acre can be determined. A sample should also be sent to the Department for determining the moisture. Fifty-six pounds constitute a bushel of shelled corn and 43,560 sq. ft. an acre. Much criticism, perhaps undeserved, has been made heretofore, especially among scientific agriculturists, in regard to the manner of harvesting the acres of corn, not only in South Carolina, but throughout the South. The effort is made in this State contest to use methods that will stand every test of reliability.

The importance of breeding and quality in the seed used in planting cannot be overestimated. It is noticed that good seed and good yields are usually found together. There were some excellent samples of corn sent in this year, and with better selection and breeding there is no reason why the best of strains and varieties cannot be developed. Equally important with good breeding and selection in seed, is the germination test. It is believed that this State loses a million dollars annually in the corn crop on account of low vitality in seed. A single germination test, made in the proper manner, will convince anyone of its value. Certainly no one can afford to plant a prize acre without first making a germination test of the seed. The value of the stover should not be forgotten. South Carolina is short on hay, and being short on hay is consequently short on live stock. Peas should be planted in the corn and the stover carefully cared for in order to increase our supply of forage.

Next year with the great National Corn Exposition in South Carolina, more people should enter the State contest. Let us show to the country that we can grow all the corn we need, and let us make our measurements so carefully that even the most skeptical will be convinced that it is correct.

VII.—THE COTTON CROP.

Cotton is still the great money crop of South Carolina, the State ranking this year as the fourth cotton-producing State of the Union. Conditions have forced the people to give more attention to phases of cotton growing and marketing than ever before during the fall of 1911. The economics of the crop are being studied as never before, and for that reason some salient and essential facts are incorporated in this report. It is to be hoped that some definite business-like method of gradual marketing will result from all of the discussion that has been in progress since September, and that more knowledge as to length of staple and other essentials to the successful development of the industry will be absorbed and applied.

This Department has, for a number of years, given the most painstaking study and consideration to every phase of cotton production, marketing, exporting and manufacture, and on all occasions has endeavored to present essential facts to the producing classes at first hand, with a view to arousing our people to a proper knowledge of everything pertaining to cotton.

THE 1911 CROP.

During the past year the people of this State planted 2,705,000 acres in cotton, against 2,626,000 last year. At one time during the year, because of drought, the cotton planters were almost in a panic for fear of material damage, but suddenly the seasons changed toward early fall, and it was quickly seen that the 1911 crop would be by far the largest crop ever produced in the State of South Carolina. The crop matured early in the season, and practically all at one time, and it is to be doubted if there will ever be such a combination of conditions, producing a maximum growth to the individual plant as existed this year. By December 13, 1,423,383 running bales of cotton had been ginned.

Up to January 1, 1912, there has been ginned 1,509,297 bales, and it would appear that not all of the ginning has yet been done. In many sections there is cotton still in the field, unpicked, which will, probably, be turned under.

Ginning this year has been done in 3,303 ginneries, against 2,229 last year.

THE SEA ISLAND CROP.

The Sea Island crop in the State has steadily decreased. In 1908, the crop was 14,534 bales, in 1909, 14,573, in 1910, 13,616, and this year, up to December 13, only 4,442 bales had been ginned. There is a tendency in the Sea Island region, on account of market conditions, to almost abandon the growing of Sea Island cotton, replacing it with upland long staple and short staple, and in a number of instances Sea Island planters have gone more extensively into corn raising.

The following statement of this year's crop, with comparisons for the last three years, indicates the rapid decline of the Sea Island:

County.	Ginned to December 13—				Crop—		
	1911.	1910.	1909.	1908.	1910.	1909	1908.
Beaufort	491	825	1,239	1,036	1,533	2,143	1,896
Charleston	3,947	8,061	9,296	10,079	11,184	12,223	12,347
All other counties.....	4	173	168	177	294	207	230
The State.....	4,442	9,049	10,743	11,292	13,016	14,573	14,534

1911 CROP BY COUNTIES.

The following table shows the amount of cotton ginned up to December 13 this year, in comparison with amounts ginned at the same dates in the past three years, and of the total crops of the last three years, by counties:

County.	RUNNING BALES. (Counting round as half bales and excluding linters.)						
	Ginned to December 18—				Crop—		
	1911.	1910.	1909.	1908.	1910.	1909.	1908.

*Dillon County organized from part of Marion.

CROPS OF PAST YEARS.

The crop of South Carolina in 1910 nearly equalled, in number of bales, the crop of 1908, and exceeded the State's production for any other year. The following summarized table gives statistics for the past five years on the total crop:

Growth Year.	Cotton Produced.											Per Cent. of total	Rank in production ginned.
	Running bales, counting round as half bales and includ- ing linters.	Equivalent 500-pound bales.				Total.	Running bales.						
		Including linters.		Excluding linters.			Upland.	Sea-land.	Linters.				
		Gross.	Net.	Gross.	Round.								
										Square.			
											Round.		
1910	1,240,540	1,191,929	1,137,658	1,163,501	1,240,540	1,197,982	13,016	29,572	9.9		5	
1909	1,164,309	1,128,049	1,075,169	1,099,955	1,164,309	1,122,809	14,578	26,927	10.9	3		
1908	1,242,012	1,195,235	1,140,936	1,170,608	1,242,012	1,201,314	14,534	26,164	8.8	5		
1907	1,126,672	1,142,244	1,090,348	1,119,220	1,126,672	1,150,318	13,247	23,107	10.0	4		
1906	531,726	806,130	854,328	876,181	531,726	904,531	8,071	19,124	6.6	8		

WEIGHT OF BALES.

The following condensed table gives the same information as to average gross weight of bales; in this connection it might be said that a great portion of the South Carolina crop went to domestic consumption:

Growth Year.	Average Gross Weight of Bale (Pounds).					Square Bales for Which Weights Were Returned.	
	Counting round as half bales and including linters.	Upland.		Sea-island.	Linters.	Number.	Gross Weight (pounds).
		Square.	Round.				
1910	480.4	481.7	358.8	480.7	710,164	341,724,236
1909	483.6	485.3	350.7	484.4	660,954	319,100,925
1908	481.2	483.0	351.8	470.6	674,539	325,415,350
1907	481.3	482.4	355.8	498.2	515,635	247,481,138
1906	480.4	481.2	347.5	495.4	396,930	190,822,348

PRODUCTION IN POUNDS.

The following tabular statement gives the gross weight of cotton produced, including linters, stated in actual pounds:

Growth Year.	Gross Weight of Cotton Produced (Pounds).					
	Aggregate.	Lint Cotton.				Linters.
		Total.	In square bales.	In round bales.	In sea-island bales.	
1910	595,080,000	581,750,000	577,090,000	4,670,000	14,210,000
1909	563,020,000	549,980,000	544,870,000	5,110,000	13,040,000
1908	507,630,000	585,800,000	580,190,000	5,110,000	12,320,000
1907	571,120,000	559,610,000	554,900,000	4,710,000	11,510,000
1906	447,500,000	438,000,000	435,200,000	2,800,000	9,470,000

The following table gives complete information as to the Sea Island crop, which was grown in four counties of this State:

Growth Year.	Production.		Average gross wt. of bale (pounds).
	Bales (number).	Total gross weight (pounds).	
1910	13,016	4,670,000	358.9
1909	14,578	5,110,000	350.7
1908	14,534	5,110,000	351.8
1907	13,247	4,710,000	355.3
1906	8,071	2,800,000	347.6

It is to be regretted that the Sea Island cotton growing industry on the coast is languishing, for the reason that the finest Sea Island cotton in the world is produced on the Islands off the coast of South Carolina. This cotton has, heretofore, sold at from 30c to 75c per pound.

UPLAND LONG STAPLE.

In my last annual report I called particular attention to the successful development of varieties of upland long staple cottons for use in all sections of South Carolina, which staples met the competition of the long staple upland cotton grown in the Mississippi Valley between Memphis and Vicksburg, in a strip about 75 miles wide and 200 miles long. During the past year the experiments with these varieties of cottons were extended and staple was developed from $1\frac{1}{4}$ to $1\frac{7}{8}$ inches in length, with the yield three times as great as Sea Island, at a less cost of production, and a yield per acre practically equal to any of the ordinary varieties of upland cotton. The plants also developed drought resistant qualities, and early maturing qualities that were scarcely expected, and the greatest difficulty encountered has been in the method of ginning, for it has been necessary to gin this staple in ordinary gins, operated very slowly, and in which no short staple had been ginned immediately preceding the operation. The growing of this class of cotton is at present being confined almost exclusively to Mississippi, Texas, Arkansas, and South Carolina, and the annual production does not exceed 300,000 bales. The textile manufacturers in this

State have been deeply interested in the matter, inasmuch as their mills have been turning over to fine goods, and for all of this class of cotton grown in this State this year prices averaging approximately 17½c per pound have been paid. There is now a great demand for the selected seed, in order to enable the producer to raise this staple and deal directly with manufacturers at home, but this Department has cautioned all against the danger of over-production.

At present the South Carolina textiles and the factories close on the border of this State, are consuming, annually, about 100,000 bales of this particular length of staple, the bulk of which is still being brought from the Mississippi Valley; indeed, 50 per cent. of the cotton going into consumption in the South Carolina textiles alone, is purchased from beyond the borders of the State, although the State has raised this year more than one million and a half bales of cotton. Elsewhere in this report this matter is touched upon in some of its other phases.

VALUE OF COTTON CROP.

The following table is of value, in that it gives comparative data for the last eight years upon net weight and estimated value of upland Sea Island cotton, and the estimated quantity and value of cotton seed:

Growth Year.	Aggregate value of cotton crop	Cotton.						Cotton Seed.	
		Total value	Upland.		Sea-island.		Quantity (tons).	Value.	
			Quantity (pounds).	Value.	Quantity (pounds).	Value.			
1910	\$98,680,000	\$22,520,000	550,780,000	\$30,900,000	4,540,000	\$1,620,000	512,000	\$16,110,000	
1909	89,820,000	75,900,000	520,170,000	74,330,000	4,970,000	1,630,000	490,000	13,960,000	
1908	61,900,000	52,330,000	563,760,000	51,170,000	4,970,000	1,160,000	522,000	9,630,000	
1907	72,060,000	62,320,000	529,590,000	60,690,000	4,590,000	1,630,000	499,000	10,340,000	
1906	49,800,000	42,560,000	415,390,000	41,580,000	2,730,000	1,000,000	390,000	7,210,000	
1905	65,800,000	56,960,000	510,320,000	55,830,000	4,390,000	1,150,000	515,000	8,880,000	
1904	56,430,000	43,320,000	545,510,000	47,250,000	3,970,000	1,070,000	549,000	8,110,000	
1903	53,200,000	46,200,000	372,600,000	45,310,000	3,260,000	960,000	376,000	6,940,000	

A STUDY IN PRICES.

In speaking of the value of the cotton crops, it is interesting to know that the estimated value of the cotton crop for the five-year period, ending with 1910, for the Cotton Belt States, was \$3,879,110,000, while the value for the five-year period ending with 1899 was \$1,529,500,000. During the last five years the price of this cotton has averaged about 12c per pound, or about \$60 per bale, and the value of the cotton seed has increased from \$13.80 per ton in 1906 to \$27.40 per ton in 1910. The value of a 500-pound bale of cotton, including the value of the seed, was \$87.15 in the season of 1907, compared with \$50.37 for 1904, and with \$30.22 in 1898. To the producer of a crop of 20 bales this meant that whereas he realized \$604 in 1898, he received \$1,743 in 1910, which increase, notwithstanding a greater cost of production at the present, measures the difference between a mere existence and a comfortable and independent living. In the season of 1911 the average price paid per pound for cotton was hardly within the range of the actual cost of production.

In 1904 the acreage devoted to cotton in South Carolina was 2,531,875, practically the same, lacking 2,000, as was devoted to cotton in 1910. In 1905 the acreage was reduced by nearly 400,000 acres, but, excepting for the year 1906, when the acreage was 2,389,000, the acreage of 1910 has been fairly well preserved.

WAREHOUSE CAPACITY.

There has been a great deal of discussion throughout the year, since the situation as to cotton became acute, as to the warehousing capacity of the State's warehouses. The warehouse capacity of the Standard Warehouse Company, which is the largest concern of the kind in the State, is 75,000 bales. Of course, if the cotton is compressed, these warehouses can carry considerable in excess of this number. The total independent warehouse capacity in the State, including the above, has been estimated by competent men as not exceeding 150,000. In this connection it is interesting to note that on October 31, 1910, there was being held in independent warehouses in the State 106,164 bales; on December 31, 1909, 126,126; on December 31, 1910, 138,741; on February 28, 1910, 108,157; and on February 28, 1911, 96,943.

In connection with the figures just quoted, it is interesting to note that at the same dates, respectively, there were in the hands

of the manufacturers, in their own warehouses, the following number of bales: October 31, 1910, 121,738; December 31, 1909, 214,885; December 31, 1910, 177,582; February 28, 1910, 197,348; February 28, 1911, 154,405.

COTTON SEED OIL INDUSTRY.

In 1909 in South Carolina the quantity of cotton seed crushed was more than double that of the preceding year. In the separate report of this Department, considerable data in regard to this industry is given, but the following condensed summary will prove of interest and value:

Year.	Number of active establishments.	Cotton Seed Crushed.		Crude Cotton Seed Products.									
		Tons.	Cost.	Average consumption per mill (tons).	Total value.	Oil.		Meal and cake.		Hulls.		Linters.	
						Gallons.	Value.	Tons.	Value.	Tons.	Value.	Pounds.	Value.
1900	102	346,550	\$7,530,045	3,398	\$10,170,440	15,745,552	\$5,465,636	156,729	\$3,796,143	108,795	\$573,569	14,356,109	\$334,912
1904	99	213,103	3,767,983	2,153	4,946,030	9,178,961	2,322,876	90,815	1,986,895	71,942	386,795	6,641,495	289,464
1909	46	156,642	2,186,406	3,293	3,043,547	6,162,218	1,545,934	57,986	1,169,645	71,542	217,896	3,223,892	110,082

In 1910, South Carolina reported 140,000 tons of cotton seed meal sold for fertilizer purposes.

CONSUMPTION OF COTTON.

The following table, covering a period of five years, up to the present year, shows the number of active spindles, raw cotton consumed, and stock held by the manufacturers on August 31, of each year indicated in this State:

Year.	Spindles consuming cotton.	Cotton Consumed (Bales).			Stocks Held by Manufacturers (Bales).		
		Total.	Domestic.	Foreign.	Total.	Domestic.	Foreign.
1910 .	3,798,387	627,708	625,025	2,683	33,955	33,554	401
1909 ..	3,715,894	606,462	603,687	2,775	53,149	52,826	323
1908 ..	3,617,358	610,784	607,722	3,012	32,738	32,510	273
1907 ..	3,502,086	608,888	606,381	2,502	96,487	95,596	889
1906 ..	3,345,075	674,588	670,911	3,677	55,642	55,320	322

South Carolina still ranks second in the United States in the number of cotton spindles in active operation, representing 13 per cent. of the total in the country. In the matter of consumption of cotton, North Carolina ranks second, and South Carolina third. South Carolina showed a loss of 10 per cent. in consumption in the year 1910.

A COMPLICATION.

A letter from President Ellison A. Smyth, of the Cotton Manufacturers' Association of South Carolina, received by the Commissioner of Agriculture on August 31, 1911, indicated the first effect that South Carolina has felt from the advance of the boll weevil. For some years it has been known that the boll weevil was steadily advancing, and that the time was not far distant when active preparation would have to be made for this insect's reception.

The situation in which the textile industry found itself at the time of Mr. Smyth's letter, was the direct result of the application of the State law relating to the introduction of the Mexican Boll Weevil, and making it impossible to ship into this State cotton from a section known to be infested with the boll

weevil. The situation referred to was precipitated by action taken by the State Entomologist, in accordance with the law. The whole matter led to a conference between the authorities of the State Board of Entomology and representatives of the manufacturers, held at Greenville, which resulted in a most satisfactory adjustment of the difficulties by merely changing the language of the order that had been issued so that the full intent and purpose of the law would be carried out without shutting out cotton from the State of Alabama, for instance, as a whole State, as would otherwise have been the consequence. The adjustment permitted cotton grown in counties not yet affected by the boll weevil, and so certified by proper Federal and State authority, to still come in to the mills in this State.

The reply of the Commissioner to Mr. Smyth's letter, which was as follows, more clearly explains the incident:

August 31, 1911.

Capt. Ellison A. Smyth, President, Cotton Manufacturers' Association of South Carolina, Greenville, S. C.

My Dear Sir: On my return to the city I find your letter of August 24, and note your request for a conference with the State Entomologist and representatives of the Southern Railway, your Executive Committee and myself.

I note also your statement that "not only the mills on finer yarns using staple cotton would feel the hardship of the enforcement of this law in the drastic manner proposed, but also all the mills in South Carolina, who buy 250,000 to 300,000 bales of cotton from other States, would be seriously handicapped in their operation and the purchase of cotton." I realize that this is a serious situation, not alone from your viewpoint, but to the grower of cotton in our own State, for our cotton crop is the money crop of our people, exceeding in value everything else, and, of course, is entitled to a maximum of protection against the introduction of the boll weevil.

In this particular matter, absolutely no authority whatever is vested in the Commissioner of Agriculture, and while I would be glad to attend the conference, such as you propose, it could only be for the purpose of posting myself as to conditions and obtaining data as to the effect of this law on present economic conditions and possible dangers to our cotton growing industry.

Under the law, the enforcement of these quarantined provisions is in the hands of the State Board of Entomology and

the State Entomologist, and the law is very plainly written. Under its provisions I have recently noted a circular over the signature of State Entomologist A. F. Conradi, Clemson College, which reads as follows:

"Owing to the habits of the Mexican cotton boll weevil, it is not believed that there is a great risk taken in shipping clean compressed cotton bales from weevil-infested territory during the months of July and August. For this reason the office of the State Entomologist did not feel warranted in operating the quarantine law as rigidly during these months. All baled cotton destined for points in South Carolina is being examined at Augusta and Greenville, and every reasonable precaution is being observed in preventing shipments in the State that may contain in concealed form any styles of the weevil.

"When the hibernating season of the weevil begins the risk of transporting the pest through commerce is increased. Furthermore, the Eastern boundary of weevil territory is advancing eastward, facilitating the weevil transportation from weevil territory in this State.

"Beginning on September 10, therefore, this office will enforce the State quarantine law, according to the letter, and after that date no baled cotton can be delivered in the State, if the shipment originated in weevil territory. Cotton mills must arrange to get their supply elsewhere and not take any risk of introducing the boll weevil into this State by shipment of baled cotton from weevil territory. All baled cotton from boll weevil territory consigned to this State must reach Augusta or Greenville before September 10. After that date such shipments are contraband.

"The above ruling refers only to clean, tightly compressed cotton bales. Other articles provided for in the Acts of 1904 and 1907 are contraband at all times, and will be confiscated whenever discovered and transportation agents and importees prosecuted as provided for by law.

"This matter was first called to my attention over the long distance 'phone by Mr. Montgomery at Spartanburg, who had quite a quantity of cotton tied up at Birmingham, Ala., en route to his mill, and he stated that he was afraid that he would have to shut his mill down; that he could not get his cotton delivered. He stated that the cotton had been in New Orleans in the warehouses for a year. All that I could do was to advise

him that the sole authority in this matter was vested in the State Entomologist, and the proper steps would be to take it up with the authorities at Clemson College. The law says: "It shall also be unlawful to import into this State cotton seed. seed cotton, hulls, bale and unbaled cotton from any point in any State or section of a State wherein the Mexican boll weevil is known to exist," and it also prohibits the transportation companies from bringing baled cotton from any State or section of a State wherein the Mexican boll weevil is known to exist. The law further requires that transportation companies shall notify the Entomologist of the State Board of Entomology of such shipments and shall hold same for the inspection of and disposal by the Entomologist.

The circular issued by the State Entomologist, so far as I can see, is in exact accord with the law, and he has acted in accord with the intent and purpose of the law, which clearly is to take every possible precaution to prevent the introducing of the boll weevil into the State of South Carolina.

I feel sure, however, that Mr. Conradi would be glad, as would also the State Board of Entomology, to participate in such a conference as you propose and go into the entire matter with you.

As I have said, officially, I have no more to do with the matter than any other citizen, but for the purpose of hearing the subject discussed among you gentlemen who are the parties at interest, I shall be very glad to attend such a conference if it be possible at any point that is agreeable to the others.

The following letter, written to Mr. Lewis W. Parker on the same date, also gives some light upon the matter:

My Dear Sir: I am in receipt of yours of August 22, informing me of the recent circular issued by the Southern Railway Company, laying a quarantine against all cotton originating in the States of Texas, Louisiana, Mississippi, Oklahoma and Arkansas, and that one requirement of this quarantine, before any cotton could be shipped from any portion of these States, there must be a certificate from the State or Federal Entomologist, stating that such articles originating in localities where, by actual inspection, the boll weevil does not exist. I note also your statement that there are "prospects that conditions in this State may be very much aggravated by any failure to secure cotton from the States above referred to."

I note, further, your request for information as to the authority upon which this requirement is based. I beg to say that so far as this State is concerned, the Commissioner of Agriculture has absolutely nothing to do with the matter, and in this regard I would respectfully call your attention to the enclosed copy of a letter that I have today written to the President of the Cotton Manufacturers' Association of this State. In that letter you will also find a summary of the law upon which the Southern Railway Company has undoubtedly issued its quarantine circular. The law seems to be plain and unequivocal and indeed very emphatic in its terms and the only thing that I could see that would even avoid the prosecution of any man buying cotton from such territory, would be an inspection by the South Carolina State Entomologist at a point outside of the State of the cotton which would be subject entirely to his orders.

LOOKING TO THE FUTURE.

Just exactly this situation had been expected for some years by the Department, and at Asheville last June, and at several places since, notably at Darlington on Friday last, the Commissioner of Agriculture called particular attention of manufacturers and growers to the necessity and sound business sense of raising upland staple such as the Columbia, Keenan, Hartsville, Coker and Webber, and other varieties, for consumption in our home mills in place of Mississippi cotton, which is now being brought in to the extent of upward of 400,000 bales out of the total of about 765,000 bales now annually consumed in the South Carolina mills.

The attention of Mr. Lewis W. Parker and of the Textile Manufacturers' Association had been directed to this peculiar and uneconomic condition of affairs for the past two years, and this and the knowledge that the spreading of the boll weevil over the Mississippi Delta would under the law close that source of supply, had been the reason for the vigorous campaign that has been pushed, particularly this year, with a view to getting the farmer to raise his cotton from selected seed furnished him and to sell it directly to the mills.

The knowledge that this condition would arise has been at the back of a vigorous effort along this line, and the knowledge that the boll weevil is hastening at the rate of 75 miles a year towards us, has caused the Department to endeavor to shape the

agricultural development policy in this State to the end that our people would be in a state of preparedness to receive the first onslaught of the weevil on our \$98,000,000 cotton crop, instead of being found in a state of unpreparedness, as were many of the people in the Southwestern portion of the Belt. For five years the campaign has been waged for diversification of other money crops and something to eat to take place of the money which is received for the cotton when cotton alone is relied upon.

In the past few weeks some farmers who had looked at the planting of upland long staple askance, expressed to the Department the belief that they could not find a market for the stuff if they raised it. This led the Commissioner to immediately take up this feature with Mr. Parker, who replied as follows: "I do not think that there will be the slightest difficulty in selling of Carolina raised staple cotton of good character, where it has been handled and ginned with care, by mills within the State, at the same price as being paid for Mississippi cotton delivered." This means plus the freight. Mr. Parker further states: "I bought many bales of staple cotton in this State (season 1910) at from 20 to 24c a pound, where the staple ran 1 3-16 in. to 1 1/4 in. and hundreds of bales at from 16 1/2 to 20c a pound where the cotton ran a full 1 1-16 in. to 1 3-16 in. I expect at an early date to put an advertisement in the paper expressing my willingness to purchase all staple cotton at full value."

Reports received by the State Department of Agriculture of all cotton grown of the varieties indicated during this season show that each of them has stood the drought better than any of the ordinary short staples, and that each gives every indication of yield per acre equally as large, if not larger, than the short staple grown in the same vicinity and that the length and uniformity of staple has been preserved, and in some instances, actually improved.

Subsequently there was further correspondence, which was promptly given the public.

VIII.—POPULATION.

When the last annual report was made, only a few of the main Federal census figures as to population were available. During the year from time to time, advance digests of the population

figures for this State have been made public, and they are full of significant and interesting facts.

TENDENCY BACK TO THE FARM.

One of the digests shows that the cityward movement in this State had been most effectively stopped, though up to three years ago it had gained considerable headway. It was fortunate that the census had been taken in the year 1910, for otherwise South Carolina's showing would not be so encouraging. The Federal Government figures for the United States as a whole show that the rate of increase for the population of urban areas was fully three times that for the population living in rural territory. Of the total increase in the population of continental United States during the past decade—15,977,691—it appears that seven-tenths, or 11,035,841, has been in urban territory, and that only three-tenths, or 4,941,850, has been in rural territory.

Considering the States without regard to geographical location, it appears that in every State and territory there has been since 1900 an increase in urban population, while in seven States there has been an actual decrease in rural population. In all but two States—Montana and Wyoming—the urban population has increased faster than the rural population, and generally at a very much more rapid rate. There is no State or territory in which the increase in urban population was less than 10 per cent., and in six States it was more than 100 per cent., and in 13 other States between 30 and 100 per cent. There are 22 States, on the other hand, in which the rural population either decreased or showed an increase of less than 10 per cent., while there are only eight States in which it was between 50 and 100 per cent.

Of South Carolina's population, only 14.8 per cent. is urban—people residing in communities of 2,500 and over. In 1900 this percentage was 12.8 and in 1890, 10.1 per cent. It is thus shown that the increase in urban population has been practically nothing. Of the States in the East, the only ones that have as large rural populations relatively as South Carolina, are Arkansas, Mississippi, and North Carolina, and the only other States in the whole country that have the same ratio are New Mexico and North and South Dakota.

South Carolina's total population is 1,518,400, and only 224,832 persons reside in the urban territory represented by towns of 2,500 and upward.

The total urban population in 1900 was 177,270, thus showing that the rate of increase in urban population in the decade had been only 26.8, against 32.3 per cent. for the entire South Atlantic States, and 34.9 per cent. for the country at large. The rural population in 1900 was 1,163,046, thus showing an increase of 11 per cent. in the decade. Even taking into consideration the opening of all the new States with small population, and necessarily high percentages, this figure is the exact average increase for the country at large. Illinois showed a decrease of 5-10 per cent., Indiana a decrease of 5.5 per cent., Ohio a decrease of 1.3 per cent., Iowa a decrease of 7.2 per cent., Missouri a decrease of 3.5 per cent., while such States as Kentucky and Tennessee showed increases of only 4.2 and 3.5 per cent., respectively. In other words, all of the Middle Western agricultural States failed utterly to get in the class of South Carolina, or anywhere near it. The East North Central division, in fact, showed a decrease of 2-10 per cent.

It is particularly noteworthy that wherever in the Far West the sparsely settled new States show large percentages of increase in agricultural population, they also show larger increases of urban population. This is because ten years ago the States were practically unsettled and their percentages of increase can not be justly compared with those of the older States.

There are 14 States in which more than half the population is living in urban territory.

As things now stand in the United States, 42,623,383 people are living in urban territory, and 49,348,883 people are living in rural territory. The percentage of urban and rural is now 46.3 per cent. and 53.7 per cent., respectively, while in 1900 it was 40.5 per cent., and 59.5 per cent., respectively, and in 1890, 36.1, and 63.9 per cent., respectively.

Analyzing the figures from every viewpoint, the most essential point of interest to the South Carolinian is that only one-sixth of the population of this State has congregated in cities, while the rest are devoting their attention to agriculture, and that in the past ten years in the rural districts nearly 180,000 more people have made their homes, while in the cities less than 50,000 have been added to the population roll.

On all sides today are to be found men who, for the past 20 years, have been struggling along in cities, but are now forsaking

city business and returning to the rural districts to engage in farm operation.

MAIN DIVISIONS.

The main divisions of the population of the State, giving the foreign born class, are shown by the following:

SOUTH CAROLINA.

	Number.		Per Cent. of Total.		Increase 1900-1910.	
	1910.	1900.	1910.	1900.	No.	Per Cent.
Total	1,515,400	1,340,316	100.0	100.0	175,084	13.1
White total	679,162	557,807	44.8	41.6	121,355	21.8
Native white, total.....	673,108	552,436	44.4	41.2	120,672	21.8
Native parents	661,970	540,766	43.7	40.3	121,204	22.4
Foreign parents	11,138	11,670	0.7	0.9	532	4.6
Foreign white	6,064	5,371	0.4	0.4	693	12.7
Negro	835,848	782,321	55.2	58.4	53,522	6.8
All other	396	188	(1)	(1)	207	110.1

BY RACES.

The following analyses of South Carolina population was issued by the Census on Sept. 5, 1911:

Preliminary comparative statistics of the population of South Carolina were issued today by Census Director Durand. The tabulations were made under the supervision of Chief Statistician William C. Hunt of the Division of Population, and are the result of the first count, in detail, of the returns of the thirteenth census. The figures are, therefore, subject to possible revision, but it is believed that the changes, if any, will not be material. The figures relate to the State, the City of Charleston, the other cities of 10,000 and over, and the counties. The total population of the State and of Charleston is distributed into white, negro, and all other, and the percentage proportion of each is given, for the censuses of 1910, 1900, and 1890. The decennial percentage of increase or decrease for the same classification for the decade, 1900-1910, also is stated. The figures for the counties are divided into white and negro, the latter including Chinese, Japanese, and Indians, but the number of such are so small that they do not materially affect the figures given for negroes. Similar statements for the other Southern States are being prepared and will probably be issued in the near future.

THE NEGRO.

The Census Bureau in November issued a preliminary statement in which the following interesting information was contained:

PERCENTAGE OF INCREASE IN NEGRO POPULATION.

As against these changes in the percentages of increase for the white population, the census shows for the negro population an increase of 11.3 per cent. from 1900 to 1910, as compared with an increase, on the face of the returns, of 18 per cent. from 1890 to 1900, and of 13.5 per cent. from 1880 to 1890. That the rate for 1890 to 1900 should greatly exceed that for the preceding decade and also that for the following decade seems improbable on general principles, and it has been contended by certain statistical writers that it is indicative of a deficient enumeration of the negro population in 1890.

However that may be, these computations show conclusively that the higher rate of increase for the white population, as compared with the negro during the period under review, is not wholly due to the effects of immigration. The natural increase of the white population is on the whole noticeably greater than that of the negro.

WHITE AND NEGRO POPULATION PROPORTIONS IN THE SOUTH.

Table No. 2 shows the total population of the South, and the proportion of white and negro, respectively, at each of the last four Federal censuses.

Of the total population of the South in 1910, as shown by this table, the whites constituted 69.9 per cent., and the negroes 29.8 per cent., as compared with 67.4 and 32.3 per cent., respectively, in 1900, and with 63.9 and 36 per cent., respectively, in 1880. The gain since 1880 in the proportion of the white population of the South is the result largely of higher natural increase among whites than negroes, although it is to some extent due to the migration of negroes to States outside the South. Neither interstate migration nor immigration from foreign countries has added very largely to the white population of the South. The natural increase of the white population is considerably higher in the South than it is in the North.

During the last decade, 1900-1910, the white population of the South increased 4,025,603, or 24.4 per cent., as compared with an

increase of 826,421, or 10.4 per cent., for the negro population of the South.

CONDITIONS IN THE COUNTRY OUTSIDE OF THE SOUTH.

For the remainder of the country outside of the South, there has been an increase in white population during the decade from 50,287,226 to 61,185,114, the growth thus being 10,897,888, or 21.7 per cent. The negro population outside the South has grown from 911,025 to 1,078,904, or by 167,879, equal to 18.4 per cent.

As already explained, the increase of the white population in the North and West is largely influenced by foreign immigration, while the increase of the negro population in those sections is, in part, the result of the migration of negroes from the South.

DETAILS FOR THE SOUTH, BY STATES.

The statistics of the white and negro population of the South, based upon the returns of the censuses of 1910 and 1900, are presented in detail by States in Table No. 3.

This summary shows, first, that in South Carolina and Mississippi, the negroes exceeded the whites at both censuses, although the proportion in 1910 is somewhat smaller than in 1900; and, second, that in West Virginia, Arkansas, and Oklahoma the negroes constituted a slightly larger proportion of the total population in 1910 than in 1900, principally as the result of the migration of negroes from other States.

This table shows, further, that in every Southern State, with the exception of West Virginia, Arkansas, and Oklahoma, the whites had a higher rate of increase than the negroes.

In Maryland, Kentucky, and Tennessee there has been since 1900 an actual decrease in the number of negroes; and in Delaware and Virginia there has been only a slight increase in negroes, namely, 1.6 per cent. in each case. These are all border States, and the facts stated are doubtless due largely to the migration of negroes from those States, partly, perhaps, to the more southerly States, but more particularly to States entirely outside of the South.

The full significance of the changes in the relative numbers of the two races in the South can not be definitely stated until more complete statistics are available, particularly those showing the interstate migration of the native born population.

THE NEGRO IN SOUTH CAROLINA.

A short time ago a careful analysis of the figures given above as to negro population in the State was made by the News and Courier, and it is so compactly put that a portion of it is reproduced here:

It will probably be interesting to note where the greatest decrease in the negro population is. We give the figures for the coast counties, where the disproportion between the races most prevails:

	1900.	
	White.	Black.
Beaufort..	3,349	32,146
Colleton..	11,187	22,265
Charleston..	27,617	60,350
Berkeley..	6,481	23,973
Georgetown	5,336	17,510
	<hr/>	<hr/>
	54,000	156,253

	1910.	
	White.	Black.
Beaufort..	3,964	26,391
Colleton..	13,094	22,296
Charleston..	32,548	56,046
Berkeley..	5,256	18,231
Georgetown..	6,158	16,112
	<hr/>	<hr/>
	61,020	139,076

These counties together show a diminution of 17,177 in the numbers of the blacks. Colleton alone among them shows a small increase of 31 in its negro population. The increase amongst the whites is 7,020, but this includes, of course, the increase in the city of Charleston.

There are other surprises, however, in the figures. Why should Barnwell County have lost blacks in the decade? The figures are 25,416 in 1900, and 24,648 in 1910, a loss of 768 blacks. Barnwell County, indeed, is the only county in the State, except Berkeley, that has lost both whites and blacks in the ten years, its white population having decreased from 10,088 to 9,561. Why should Abbeville County show an increase from 22,069 to 22,522,

or only 453 blacks. Fairfield County an increase of only 2 blacks, Chester County a loss of 232 and Greenville County an increase of only 1,371 blacks, while Orangeburg and Calhoun Counties together show an increase of 8,091, or from 41,443 to 49,534, and Spartanburg an increase of 5,248 or from 21,169 to 26,417?

WHERE NEGROES HAVE INCREASED MOST.

The following are the figures for the counties showing at least 3,000 increase in colored population :

	1900.	1910.	Increase.
Spartanburg..	21,169	26,417	5,248
Orangeburg..	36,795	41,443	8,081
Calhoun..	12,739		
Williamsburg	19,867	23,215	3,348
York..	21,900	25,387	3,487
Florence	16,655	20,342	3,987
Clarendon..	20,151	23,394	3,243
Marion..	11,209	18,189	4,636
Dillon.	11,616		

These counties show an increase together of 32,030 blacks, or nearly two-thirds of the net increase in the State.

The County of Lee has since 1900 been established from other counties in the central and northeastern parts of the State, and the fact that we have not yet been given the population of the territory from which this new county has been made up, it is not possible at present to give the exact increase of blacks in Sumter, Darlington and Kershaw Counties, but it has been large. In the case of Calhoun County it is formed almost entirely from Orangeburg County, and the township taken from Lexington County would not materially alter the calculation. Viewing the figures for the State as a whole, it would appear that the increase among the blacks has been in the counties where agriculture has been most profitable, just as the increase among the whites has been in counties where cotton mills have been extensively established, bringing in white population from this and other States.

COUNTIES HAVING A WHITE MAJORITY.

It may not be generally known that of the 43 counties existing at the time of the taking of the census only 10 have a white majority. These are as follows:

	White.	Black.
Anderson	43,232	26,336
Pickens.. . . .	19,992	5,430
Oconee.. . . .	20,489	6,848
Greenville.. . . .	47,515	20,862
Spartanburg.. . . .	57,048	26,417
Cherokee.. . . .	17,669	8,510
Lexington.. . . .	20,402	11,638
Lancaster.. . . .	13,524	13,126
Horry	20,325	6,670
Chesterfield.. . . .	15,738	10,563
	<hr/> 275,934	<hr/> 136,400

It will be seen from these figures that in these counties the whites outnumber the blacks by 139,534 souls, or more than two to one, and while the whites have increased to the number of 60,796 or over 28 per cent., the negroes have increased only 17,054, or a little over 14 per cent.

But while there are only ten counties with white majorities, there are seven more where the majority is small enough to lead to the conclusion that at the present relative rate of increase of the whites and negroes, there will be at the next census a white majority. These counties are as follows:

	White.	Black.
Aiken	18,997	22,522
Dillon.. . . .	10,999	11,616
Laurens.. . . .	18,796	22,754
Marion.. . . .	9,387	11,209
Saluda.. . . .	9,754	11,189
Union.. . . .	14,439	15,472
York.. . . .	22,331	25,387
	<hr/> 104,703	<hr/> 120,149

To these counties should be added Richland County, containing Columbia, the Capital of the State, for although the whites increased there to the extent of 3,935 persons, yet the increase of the blacks in the last ten years has been only 1,458, while that of the whites has been 8,096.

It is quite remarkable that this increase of the white population has been directly "in the teeth" of the legislation of the State, and the sentiment of the farming interests, for it is well known that all attempts to assist immigration along the whites have proved unpopular, and there are heavy penalties against inducing laborers to emigrate, the laws on the subject notoriously operating only upon the colored race.

COMPARATIVE STATISTICS.

For the purpose of enabling our readers to compare the growth of the State in population, we give the following figures taken from each census since the foundation of the government:

	White.	Colored.	Total.
1790..	140,178	108,805	249,073
1800..	196,255	149,336	345,591
1810	214,196	200,919	415,115
1820	237,440	265,301	502,741
1830	257,863	323,322	581,185
1840..	259,084	335,314	594,398
1850	274,563	393,944	668,507
1860..	291,300	412,320	703,708
1870..	289,667	415,814	705,706
1880..	391,105	604,332	995,567

The ten years from 1790 to 1800 covered a period when the great immigration into what was then known as the "Back Country" was still in progress, and the increase among the whites was 40 per cent. It never again reached 11 per cent. until the census of 1880 when the census figures showed an increase of 35 per cent. among the whites, arising, however, as we have said above, from the many omissions in the census of 1870. The present rate of increase of 21.8 per cent. is, therefore, a large one for the whites of South Carolina, and compares favorably with States receiving thousands of immigrants every year.

IX.—FORESTRY.

With each succeeding year the necessity for some kind of State control, looking to the preservation and conservation of the forestry of this State, becomes more apparent. In the Forestry Bulletin issued by this Department there was contained

a draft of a proposed forestry measure, which was later introduced, and is now pending before the General Assembly. I cannot too strongly urge the enactment of this measure, in view of the fact that it will not entail any direct appropriation worth mentioning. In my last annual report I dealt, at some length, with the forestry conditions in the State, giving many facts and figures that would naturally be supposed to command most careful attention.

During the past year particular notice has been directed to the great amount of destruction going on in the State in the pine forests due to the activity of the Southern pine beetle, a small brownish or black beetle, somewhat smaller than a grain of rice, which was first noticed in the Carolinas in 1868. The attention of the Commissioner of Agriculture was first called to this matter by Representative McKeown of Chester County, who reported the dying of large quantities of pine lumber in his section from some unknown cause.

The investigations taken up with the U. S. Bureau of Entomology, under the direction of Mr. A. H. Hopkins, in charge of Forest Insect Investigations, resulted, in the summer of this year, in the establishment of U. S. Forest Insect Field Station No. 7, with headquarters at Spartanburg in this State, and the following is a comprehensive extract from the valuable bulletin issued on December 26, 1911, by Mr. Hopkins, entitled, "The Dying of Pine in the Southern States: Cause, Extent and Remedy":

"It has been shown that this beetle has existed in the Southern States for at least 40 years, and there is good evidence that it has occupied this region from time immemorial, but it is only at comparatively long intervals that it increases to such numbers as to cause widespread depredations.

"During the summer and fall of 1910 and the winter and spring of 1911, correspondents of the Bureau of Entomology in different sections of the South, and especially in the Atlantic and Gulf States, reported that the pine was dying in patches, and that in some places the trouble was alarming. Therefore, it was made the subject of special investigation in May, June and July, 1911, which resulted in the location of a forest insect field station at Spartanburg, S. C., for the purpose of studying the character and extent of the depredations and conducting a campaign of instruction and demonstration on the proper methods for controlling the beetle and protecting the remaining living

timber. This work has been prosecuted in such a manner as to convince the majority of the owners of pine within the areas covered by the representatives of the Bureau of Entomology that the Southern pine beetle is a menace to the pine forests of the Southern States. There is now a general and widespread interest manifested throughout the worst affected sections, and there is every prospect that if general action is taken by the owners, in the utilization or treatment of infested trees according to the recommendations of the experts of the Bureau of Entomology, the beetles can be controlled this winter at slight expense, and that the remaining living pine will thus be protected from further depredations.

"Since the location of Forest Insect Field Station No. 7 at Spartanburg, S. C., on July 5, 1911, the agents of the Bureau of Entomology, United States Department of Agriculture, detailed to the station, have been very active in the study of the character and extent of the depredations by the Southern pine beetle in South Carolina, Georgia, Alabama, North Carolina, Mississippi, Texas, Florida, Virginia, Louisiana, Maryland, Arkansas, Missouri and Tennessee. Observations by the agents and information conveyed by correspondents from all sections of the South show that in the aggregate a vast amount of timber has been killed by the Southern pine beetle during the past two years. The dying and dead trees occur as scattering individuals or in clumps, large patches, and in some places whole forests. All are more or less conspicuous by their fading, red, black or denuded tops, plainly indicating the presence of the beetle or the progress of its work.

"It has been found that each patch of dying trees, with their fading and greenish-brown tops, located anywhere in the Southern States, is a menace to the living pine within a radius of 3 or 4 miles. The broods of the Southern pine beetle developing in the bark of the trees of one such center of infestation may swarm in any direction and settle in the healthy timber. Thus one or more additional patches is killed until nearly all of the large, as well as the small, pine over an extensive area is dead.

"When these centers of infestation are numerous within the confines of a county, or even a larger section of territory, they can only be compared with the starting of so many forest fires, and, as has been demonstrated, they may lead to far greater destruction of merchantable pine than has ever been recorded

as resulting from fire in the Southern States. Therefore they demand similar prompt and radical action on the part of the owners in order to protect their living pine."

Agents from the station at Spartanburg have been given as complete co-operation as possible by the State Department of Agriculture, in the prosecution of their work, and one of them, Mr. Mason, has been carried across the country through the middle section of the State and given every opportunity to note the infested localities.

X.—DRAINAGE.

At the last session of the General Assembly, the general Drainage Act, which has been so long needed, was placed upon the statute books, and a long step was thereby taken towards the reclamation of the 3,000,000 acres of the most valuable agricultural lands in the State, along the coast—reclamation from the standpoint of the public health, as well as for agricultural purposes. In a few years several million dollars should be added to the taxable values of the State, and many millions to the agricultural production of the State.

As soon as the law became effective, this Department began a vigorous campaign for the formation of drainage districts under its provisions, and the Commissioner has done much personal work to this end in the field.

The first section to move in the matter was near McClellanville, in Charleston County. This district was well under way, when an issue was raised as to the constitutionality of the Act by Charleston attorneys. Knowing the sweeping authority and mandatory requirement of the State Constitution, contained in Article 1 of Amendments to the Constitution of 1895, ratified Feb. 8, 1901, this Department referred the matter to the Attorney-General in the following letter, dated July 17, 1911:

Dear Sir: In view of the vital public interests immediately concerned, involving the reclamation of upwards of 4,000,000 acres of the most valuable lands in the State, now lying idle, and the public health of that territory as well, and,

In view of the fact that undertakings looking to such reclamation, now well under way, in most of the coastal counties of the State, are liable to be estopped because of apprehensiveness on the part of the people resident in the coast counties, caused by allegations of "unconstitutionality" of the Act of the General As-

sembly, approved Feb. 18, 1911, pp. 92-113, popularly known as the Drainage Law, and,

In view of the fact that at its last session the General Assembly of South Carolina, in order to obey the *mandate* of the Constitution of the State as set forth in Article 1 of Amendments to the Constitution, Code of Laws of South Carolina, 1902, Vol. 2, page 117 of appendix to Volume 2, Act ratifying amendment, approved February 8, 1901, enacted the law above referred to, and,

In view of the fact that this law was thoroughly examined in all its phases, especially on the point of "Equitable" assessment as required by the Constitution, with much care by the judiciary committee of the State Senate, and,

In view of the fact that under this mandate of the Constitution and under the provisions of the Act passed thereunder, the people in our coast counties are now actively at work to accomplish the clearly defined purpose of both the Constitution and the Statute law, and valuable time is likely to be lost because of the apprehensiveness referred to, which could easily arise from a mere idle rumor,

I deem it an urgent public duty devolving upon the head of this Department, being charged with the prosecution of all undertakings looking to the material development of the State, to officially call this important matter and its urgency to your attention, and request you to advise me whether or not, in your opinion, this Act of the General Assembly is in any particular unconstitutional, considered in the light of the mandatory requirements of the amendment to the Constitution herein above referred to, or is defective in any other particular affecting the execution of the terms of the Act.

I have the honor further to request you, and to offer any assistance in that matter that may be possible, in case you deem it necessary to institute such proceedings in the courts as will bring the speediest possible pronouncement.

Campaigns for the formation of drainage districts are now in full swing in many of the counties embraced in the territory involved, and but for the conditions arising as set forth, the actual work of reclamation would soon be under way. As bond issues are involved, uneasiness is equivalent to cessation of effort. Hence the necessity for this request.

I beg to attach an exact copy of the amendment to the Constitution referred to above.

Trusting that I may be fully advised at your earliest convenience, I am, etc.

This step necessarily caused considerable delay, but soon the Attorney-General rendered an opinion so convincing that the legal issue was dropped.

Meantime the local agitation was continued in many of the coastal counties, notably Colleton, Georgetown, Charleston, Hampton and Horry, and recently the initial steps for the formation of the district in Hampton were taken, after opposition on the part of persons connected with some of the hunting clubs had been overcome. Down in Georgetown County independent drainage reclamation work had already been accomplished with wonderful results by private parties, and an excellent object lesson had been afforded.

U. S. ENGINEER DETAILED.

These things led the U. S. office of Drainage Investigations to assign to this State U. S. Drainage Engineer F. G. Eason, with headquarters at Charleston, for the purpose of making surveys for proposed districts. Mr. Eason and his assistants have had more work than they could do.

RESULTS ACCOMPLISHED.

At my request the chief of the office of Drainage Investigations, Mr. C. G. Elliott, has furnished me with the following summary of the work done by Mr. Eason:

"Mr. F. G. Eason, drainage engineer, Drainage Investigations, U. S. Department of Agriculture, has been assigned to the drainage work in South Carolina and has opened an office in Charleston.

"A number of drainage surveys have been made with full reports and plans, and also a number of preliminary examinations have been made. The following is a very brief summary of the different projects:

DRAINAGE SURVEYS.

James Island, Charleston County, S. C.

"Survey and report by George M. Warren, drainage engineer, assisted by Arthur G. Hall, assistant drainage engineer. 10,600

acres were covered by the survey out of a total of 19,800, which includes the large water surfaces of the Island. The balance, not surveyed, has insufficient elevation to be habitable or to be profitably reclaimed.

"The drainage plan proposed divides the Island into 50 drainage units and includes a tile and open ditch outlet system for each unit. Tile drainage systems were also worked out for some of the units. An important provision of the plan calls for open ditch reservoir outlets into which the tile mains will discharge, furnishing storage for all of the precipitation during such times as the sluice gates will be closed. This plan permits keeping the water-table in the adjacent lands low enough so that plant growth will not be interfered with. This survey was made at the request of the Agricultural Society of South Carolina.

"The estimated cost per acre of \$15.27 includes all of the dikes, sluices, storage ditches, outfall channels, and main tile drains, as well as engineering supervision. The estimated cost for Drainage District No. 36, including in addition the complete tile drainage system, amounts to an average of \$37 per acre.

The McClellansville Drainage District, Charleston, S. C.

"The survey, as well as the report and plans for this project, were made by F. G. Eason, drainage engineer.

"While the preliminary examination covered all of the swamps in the vicinity of McClellansville, it was decided that but one swamp would be worked out in detail, in order to show the feasibility of draining these swamps, as well as the financial advantage.

"The Little Wamba Swamp, comprising some eight minor swamps, was chosen, and the district as formed comprises 4,450 acres. The entire northern portion of the swamp consists of cut-over pine woods, almost free from underbrush, the lands being light and sandy, with a good fall toward the coast. The remainder of the district is a network of swamps and branches, and the estimated cost for this work is an average of \$4.38 per acre. This includes only outlet drainage, but does not include laterals. It is expected that the work will be done in the near future.

Summerville Drainage Project, Dorchester and Berkeley Counties, S. C.

"This drainage survey, carried out at the request of the City of Summerville, was conducted by F. G. Eason, drainage engineer, and A. G. Hall, assistant drainage engineer.

"The district is about 12 miles long and averages about two miles in width, containing 8,635 acres. The greater portion of the land is heavily timbered and a large part of the cultivated land lies on the outskirts of Summerville and along the main roads.

"The main outlet for the district is the Ashley River, the main drainage channel being Saw Mill Branch, called at the lower end Rose Creek and Dorchester Creek.

"The proposed improvement consists of a canal 11 miles long, estimated to cost about \$19,000, *at an average cost per acre of \$1.02*. Some work had already been done in this district, but was not effective owing to insufficient outlet. The only tea farm in the United States is situated in the district, the owner being Dr. C. U. Shepard.

Georgetown Project, Georgetown County, S. C.

"This drainage survey is now being carried on by F. G. Eason, drainage engineer, and embraces a tract of *some 20,000 acres*. The land is being divided into 40-acre farms, complete drainage and road systems will immediately be installed, and the lands settled as rapidly as possible. The lands are flat and have had all of the merchantable timber cut off, and are, of course, swampy. The tract is owned by the Georgetown Farm Land and Home-seekers' Company.

PRELIMINARY EXAMINATIONS.

The Great Pee Dee River Valley, Charleston County, S. C.

"F. G. Eason, drainage engineer, made a very thorough examination of this project, and ran a single line of levels through the county, thus furnishing data sufficient for a preliminary plan of reclamation to be outlined.

"The valley is subject to frequent and large overflows, making necessary a complete system of levees for the protection of the lands.

"An attempt was made to reclaim these lands over 100 years ago, but as each individual landowner carried out his own plan without consideration of his neighbor, the dikes, as a rule, were placed too close to the river, frequently on the very river banks, with the result that they have been overtopped and very seriously damaged, and, in many instances, entirely abandoned. The levees as planned leave sufficient floodway, so that the levees will not, in all probability, be overtopped if built as planned.

"Mr. Bright Williamson, one of the large landowners in this section, is already reclaiming his land according to the proposed plan. The plan covers the reclamation of 17,380 *acres*, at an average cost of \$14.60 *per acre*, the levees *averaging from 8 to 10 feet in height*.

Wadmalaw Island.

"An examination was made of this Island by George M. Warren, drainage engineer, the request having been made by Mr. C. Bissell Jenkins, President of the Cameron & Barkley Company, Charleston.

"The Island contains, including water surfaces, about 26,600 *acres* and lies about 15 miles southwest of Charleston. The cultivated lands on the Island are stated to be worth from \$50 to \$75 *per acre*, while the poorer lands, because undrained, are not worth more than \$10 or \$15 *per acre*.

Lands of the Okeetee Club and Others, near Switzerland, Hampton and Beaufort Counties, S. C.

"Mr. J. B. Bostick, Superintendent of the Club, requested an examination of the tract which contains some 65,000 *acres*. George M. Warren, drainage engineer, made this examination and report with suggestions and recommendations for the proper drainage of the tract.

"The plan proposed calls for a drainage ditch up the run of Great Swamp, and through the various arms of the swamp. It is estimated that this outlet would cost in the neighborhood of \$135,000, and \$5,000 additional should be added to cover the cost of a sluice. Sub-main and lateral ditches would, of course, be necessary in addition to the main outlet ditch. It would be necessary to protect the district from the floods in the Savannah River."

AMENDMENTS TO THE ACT.

The drainage law should be made applicable to the entire State at the earliest possible moment, for there are swamp lands in the middle and in the Piedmont sections of the State, which, by a little intelligent drainage work, could be made immensely valuable to agriculture. In our sister States the drainage law is applicable to the entire State in each instance. If it be made to apply to the entire State, the people in any section are not compelled to avail themselves of its provisions unless they desire to do so.

The law should be amended also, so as to provide an exact method for the payment of the expense of preliminary examinations, and for the payment of the Board of Drainage Commissions, as well as a definite manner of appointment or election.

IMPORTANT RESULT OBTAINED.

By December such interest had been aroused in drainage reclamation work that South Carolina sent a strong delegation to the National Irrigation Congress in session in Chicago. Within this powerful body there had been steadily growing for several years a deep interest in the question of drainage.

This delegation not only succeeded, without creating any degree of antagonism on the part of the great organization known as the National Irrigation Congress, which has accomplished so much, in getting that great organization to stand flat-footed for the Federal aid for the reclamation of the coastal lands of the South Atlantic States, as well as the same class of land in thirty-nine other States, but brought about the organization of a similar National Congress to be known as the National Drainage Congress. Hard work was done by the delegation in perfecting the organization for immediate results, and the new organization has been launched exactly upon the lines of the National Irrigation Congress, which has so far reclaimed 14,000,000 acres of arid lands through its efforts before the Congress of the United States. The new organization was not only fully organized, but that the plan of campaign was gone into in detail and worked out so that already active work all the way from North Dakota to Florida, and Louisiana and Maine is under way. Before the executive officers and executive committee left Chicago, the where-withal for the maintenance of officers to direct the work was obtained and placed in the bank.

The office of President of the Congress was purposely left vacant until the next general meeting in New Orleans in April, and in the meantime the two executive Vice-Presidents, Mr. Edmund T. Perkins, of Illinois, and the head of this Department, will respectively have executive directions of the field of operation. Mr. Perkins will direct all of the work in the territory ranging from North Dakota through the Middle West and down the Mississippi Valley, with headquarters in Chicago. The South Carolina Commissioner will do the same work in the Atlantic Seaboard, and Northern and New England States, eastward from

Chicago and the Mississippi, and the headquarters will be in Columbia. The Third Vice-President chosen by the Congress was Col. Gorgas, now in charge of all the United States reclamation work in Panama, who has done so much to restore health conditions in that formerly almost uninhabitable region. The executive committeeman for South Carolina is Capt. Whitford, of Charleston.

The first real big Congress ever held in America on drainage the South Carolina delegation succeeded in securing for Charleston, to be held there during the National Corn Show in Columbia, and the fact that the Southern people had already obtained the National Corn Show was a strong card in influencing the ultimate decision in favor of Charleston.

There was no rupture of pleasant associations with the National Irrigation Congress.

At an early date the entire thirty-nine States will be organized in such shape that hundreds of their citizens interested in the reclamation of the low and swamp lands will be writing to the members of Congress urging congressional action, and that action will look forward to the utilization of the valuable machinery now being employed by the United States Government in the construction of the Panama Canal for the purpose of reclamation for the public health, and to the public agriculture, the millions of acres of land involved. South Carolina is concerned to the extent of over 48,000 square miles, or something like 3,000,000 acres of valuable agricultural land, which is now not only more or less worthless, but lying idle and unproductive. It is believed that this effort would add something like \$60,000,000 to the agricultural production of the State eventually, and it is generally conceded that a greater sum than that will be added to the taxable values of the State if the movement proves as successful as it is to be hoped. So far as the country at large is concerned, it was the concensus of opinion of the drainage advocates at Chicago that something like a billion and a half dollars could be added to the agricultural wealth of the country annually by this reclamation work, when it had been accomplished. It was universally admitted, even by Mr. Pinchot and Mr. Garfield, that the proposition of the reclamation of these lands was far less costly, while at the same time a very much bigger proposition than the irrigation undertakings in the West, and that the time and cost of reclamation was a mere bagatelle compared to the projects in

the arid country, which, even if continued, could not be completed before 1930.

STATE ASSOCIATION FORMED.

Immediately upon the return of the South Carolina delegation from Chicago, a State gathering was held in the City of Charleston on Jan. 5, 1912, resulting in the formation of a strong and active State Drainage Association. This resulted from the following call issued by the Commissioner of Agriculture:

"In view of the fact that the first session of the newly formed National Drainage Congress is to be held in the City of New Orleans in April, 1912, that session being one for the perfection of the organization recently formed in Chicago looking to the reclamation of the swamp and low lands of the country at large, and in view of the fact that the second Congress is to be held during the following year in the City of Charleston, in our State, and in view of the further fact that the work to be undertaken means so much to the coastal area of South Carolina, it is extremely desirable that this State be thoroughly organized at the earliest possible moment upon the question of drainage, with the view to taking active steps preliminary to the New Orleans meeting and looking to the largest gathering of its kind ever held in this country in Charleston the following year.

"Being an officer of the National organization, and at the head of the Department of the State Government directly concerned in the restoring to agriculture the 3,000,000 acres of valuable lands now idle along our coast, and being of the utmost importance that such an organization be formed at once, I hereby call a State Convention, on the subject of drainage, to be held in the City of Charleston on Friday, Jan. 5, for the purpose of forming a State Drainage Association, which shall be a permanent organization charged with work looking to the development and reclamation of our overflow lands. I, therefore, urge upon the mayors and intendants of all towns and villages in the coast counties of South Carolina to name delegates to attend this convention, and hereby invite all persons in the country districts interested in the cause to attend said convention as delegates. While the convention is to be primarily a gathering of representatives from the counties in the coastal plain, it is desired also that representatives of any other counties having lands that it is desirable to reclaim by drainage, attend the convention.

"I do not deem it necessary to point out the addition to the annual productive wealth or to the taxable property of the State that will follow the success of a properly conducted movement, but I do consider it of greatest importance that every man residing in the drainage territory shall realize the value of organizing ever to accomplish the desired end, and for this reason I would particularly urge a large and representative attendance at this convention in the City of Charleston.

"I am informed that the Chamber of Commerce extends an invitation to entertain and care for this convention, and I feel sure that such entertainment will be all that can be desired."

HUMID SECTION IRRIGATION.

This Department has long been satisfied that much could be accomplished for the hay growing, trucking and melon industries by means of proper irrigation, and has long been convinced that irrigation could be successfully employed following drainage reclamation. The central idea is that of providing water from the many sources of artesian and other supply available for the purpose of carrying short-lived but valuable crops easily affected by drought through the dry spells.

Some experiments had been made in certain sections of the humid region with hay which had proven eminently successful, increasing the yield of hay, for instance, something like four times, and in view of these successes, the Department got into communication with the U. S. Office of Irrigation Investigations, and last spring Irrigation Engineer, Milo B. Williams, visited this State.

During March, 1911, under the direction of Engineer Williams, an irrigation plant was installed on the plantation of W. G. Childs, some miles below Columbia. Five acres of land were prepared for cropping under irrigation, but due to labor difficulties beyond the control of the engineer the plant was not operated during the season and no results were obtained.

"The possibilities of irrigation in South Carolina," writes Mr. Williams, "are exceedingly great and other plants are contemplated under more congenial circumstances for the year 1912."

On the coast there have been a number of successful experiments with irrigation of truck.

During the summer the matter took more definite shape when the melon growers in the melon growing districts of the State

sustained very heavy losses from the dry season, which losses would have been converted into handsome profits by the use of a little water in intelligent irrigation when the vines were in greatest need of water. The State Department of Agriculture was communicated with by the growers and application was made to the Washington office for Mr. Williams to be sent to South Carolina forthwith. Unfortunately Mr. Williams was in California at the time, and could not be sent immediately. The effort to do something with this condition looking to the future was not, however, abandoned. In regard to this matter Mr. Williams during the fall wrote as follows to the Department:

"I have your letter of July 10 in regard to further irrigation investigations in your State, and I assure you we will get into your territory as soon as possible.

"The extreme drought that the Northern States have been experiencing during the summer has loaded me up with correspondence and trips so that it seems impossible for me to put them aside at this time.

"I gather from your correspondence that the people of South Carolina have awakened to the fact that the insurance given by irrigation is a good business proposition, and that if I can spend some little time in South Carolina again, as I did last spring, they will be more willing to receive assistance. I will be in the South early enough this season to take care of any project for next year's irrigation. If this is not satisfactory, kindly let me know and I will make every effort to meet your desires."

Engineer Williams has just returned from California where he has been engaged in some extensive irrigation projects. It was the purpose of the office in Washington to have him come here almost immediately to go thoroughly into the melon, cantaloupe and truck situation, but in view of the facts as set forth in his letter he has been assured that his visit early this year will not only be most satisfactory but most welcome.

The State Department of Agriculture has received communications from parties in other States experienced in the furnishing and installation of irrigation plants, wishing to take a hand in the campaign for irrigation in this State. In view of the coming visit of the U. S. engineer, however, no steps along this line have yet been taken.

XI.—COMMERCE AND MANUFACTURES.

During the past year this Department has been concerned chiefly with the manufactures of the State in a statistical and exploitation manner, and has made a special effort to study their needs and render such assistance in that respect as possible. The general condition of manufactures is fully dealt with in the separate report of the Labor and Statistical Division of the Department.

In the matter of Commerce every effort has been made to assist in the work of developing and opening the ports of the State and the navigable streams, but to this end the Commissioner has personally been engaged in field work, pointing out essential facts and possibilities to the people. The Edisto river project has been particularly urged.

FLUCTUATION OF WATER FLOW.

On August 10 last, M. R. Hall, District Engineer of the U. S. Geological Survey, with headquarters at Atlanta, wrote the State Department of Agriculture as follows:

"Some years ago the U. S. Geological Survey maintained quite a number of gauging stations on various streams in South Carolina. One after another nearly all of these stations have been discontinued because the daily fluctuations in flow caused by the operation of water powers above made it impossible for us to make an accurate daily record of flow without the use of automatic recording gauges which alone could give the average daily river heights.

"It was impracticable to use such gauges because until very recently there were no such gauges on the market which were well suited for our work, and the ones which were available and could have been used, although not very efficient, were so high in price as to make it practically impossible for us to use them with the limited funds available for the work.

"We are now using a type of gauge somewhat better than the ones formerly available, but the cost question has not been greatly reduced.

"As you perhaps know, the stream gauging work of the U. S. Geological Survey is now being done almost entirely by a co-operative plan in connection with the State survey, by which both parties contribute a like amount of funds for the work. This

plan is not yet fully carried out in any of the Southeastern States comprising this district, but in order to efficiently continue and increase the work it will be necessary to inaugurate such co-operative agreements in each of the States, as the reduced allotment from the general funds cannot be made to cover the district otherwise.

"I wish during the present fiscal year to somewhat increase the work in South Carolina. This increase can be made greater if you can arrange to contribute as much money from the State's funds as is used from the allotment of the Government funds, which could not in any case exceed \$500.00 from each source, making \$1,000.00 for the work in the State. This would little more than equip and maintain two stations if recording gauges are used, but if some of the smaller streams not already developed to any great extent are selected the cost per station will be less.

"I hope you will consider these suggestions and will write me fully in regard to the possibility of forming such a co-operative arrangement at this time."

Mr. Hall was informed that the Department, while in sympathy with the work, had no funds available, and a legislative appropriation would be necessary.

A further communication from Engineer Hall suggested an appropriation of from \$400.00 to \$750.00.

The following correspondence on a matter of particular importance in its relation to the cotton marketing situation at this time, is self-explanatory:

WAR DEPARTMENT,
UNITED STATES ENGINEER'S OFFICE,
CUSTOM HOUSE.

Charleston, S. C., May 17, 1911.

Commissioner E. J. Watson, Columbia, S. C.:

Sir.—I have the honor to inform you that the River and Harbor Act, approved June 25, 1910, called for a preliminary examination or survey of the harbor at Charleston, S. C., with a view to obtaining a depth of 30 feet at low water.

The preliminary examination has already been made by the district officer, and a very full report submitted. We found the project sufficiently promising to recommend a survey and

estimate, which recommendation was concurred in by the Board of Engineers for Rivers and Harbors, and was ordered by the Chief of Engineers, U. S. Army. No actual special survey was necessary for the accomplishment of this project, as the frequent surveys made to determine existing conditions in the channel furnished all the information desired.

A study of this data has, accordingly, been made and a report submitted, which report is not altogether favorable to the improvement, and no further improvement than that contemplated by the present project is recommended at this time. Briefly, the grounds for this unfavorable recommendation are:

First, that the present project will secure a depth of 28 feet in a channel of ample width; that the mean rise and fall of tide is more than five feet, so that there will be a depth of 30 feet and upward in the channel for three-fifths of the time; that most of the commerce of this port is coastwise, and is carried on in vessels drawing only about 20 feet; that the foreign commerce, except in special lines between special harbors, is carried on in a class of steamers that is sufficiently accommodated by a depth of 30 feet, and that no appreciable benefit to commerce would result from an increased low water depth of two feet. Finally, that the principal seaports in the States of North Carolina, South Carolina, Georgia and Florida, are all now being improved under projects contemplating a navigable and usable depth to the sea of about 30 feet at ordinary high water, and that it would not be wise to single out one of these harbors to be improved to a much greater depth than any of the others, where there is nothing in the amount of character of its commerce to justify it.

Further information bearing upon the portions of the report concerning the question of worthiness should be addressed to the undersigned at the United States Engineer Office, Savannah, Ga.

The information contained herein is given you in order that you may have an opportunity, if you so desire, to present any argument or additional information bearing upon the subject to the Board of Engineers for Rivers and Harbors, Southern building, Washington, D. C., and such information should be submitted to the Board in time to reach it within four weeks from the date of this letter, May 17, 1911.

(Signed.)

Very respectfully,
DAN KINGMAN,
Colonel, Corps of Engineers.

Columbia, S. C., May 18, 1911.

Col. Dan C. Kingman, U. S. Corps of Engineers, U. S. Engineers Office, Savannah, Ga.

My Dear Sir: I beg to acknowledge the receipt of your letter of May 17, and am glad indeed that you have called my attention to the grounds for the unfavorable recommendation made in the matter of the project for the deepening of the water upon the bar at the port of Charleston.

As the head of the State Department of Commerce, it has fallen to my lot in the last few years to make almost careful study of American commerce in its relations to the European ports and to the Panama Canal soon to be opened, and our investigations in regard to existing conditions have not been confined to the conditions existing in this country, but has extended into the head offices of the great steamship companies abroad, which companies, by the way, now do all of the commerce for us, and into the offices of the principal importers and distributors abroad. Furthermore, these investigations have been directed largely to the present day methods of getting to the markets of the world the cotton of the South, which I need not tell you now constitutes the bulk of the agricultural exports of the United States and preserves the balance of trade in favor of our common country. We have looked into the methods employed in getting to the markets of the world the cotton manufactured product, which now goes so extensively from the Southern States. The facts that we have found show that precious little has ever been done by the United States Government to bring about the handling of these export products to export upon a sound, economic basis, or even upon an ordinary common sense basis.

Now when the Government can at a small cost put one of our ports into such shape as it will meet the first demands of the large ocean-carrying organizations, it looks as if once more the opportunity to do something substantial is to be allowed to slip by. Without reflecting in any way upon those who prepared the adverse report, the outline of which you give, I can but say, that to any man familiar with the subject of world's commerce and transportation, the reasons assigned are so utterly weak and so regardless of economic basis as to themselves afford strong argument as to why the general government should provide a proper depth of water at the most strategic of all Atlantic ports on our coast. I use the term strategic not alone as applying

to commerce, but applying also in the time of war. I note the statement "where there is nothing in the amount of character of its commerce to justify it," as applying to all of the South Atlantic ports. I trust I may be permitted to say that the richest section of any country has no commerce and can have no commerce until railroad or water transportation that can develop that commerce is afforded. This is the very thing that I encounter with the great steamship companies in every European office, when I was devoting my every energy to the opening of a South Atlantic port in the heart of the cotton belt that would enable this crude export product in all of its immensity to be shipped in a logical and proper manner. The great steamship companies of the world are ready and willing and anxious to get a chance to put into operation a logical line of transportation replacing the present scheme of long railroad hauls thousands of miles in order to get the product aboard the ship, but nothing has been done by us to provide the "right-of-way." *Of course*, the present commerce of Charleston, as well as of every other Southern port in coastwise or confined to light draft foreign tramp steamers, and unless some port is rendered a 30-foot port, that trade is going to continue confined to the same conditions. I know what I am talking about, when I flatly deny the statement that "no appreciable benefit to commerce would result from the increased low water depth of two feet," for I have had the opportunity to talk with the men engaged in the carrying trade, and I have had the opportunity to enter the port of Charleston aboard of a liner of one of the big companies feeling her way into port for the purpose of testing conditions and opportunities.

In regard to the project under way at the principal ports of the four States mentioned, I would not say one word that might be construed into a desire to injure any one of them, but facts are facts, and aside from Charleston's commanding position from both the standpoint of trade and war, I respectfully beg to submit that this is the only port on the Atlantic into which a large vessel of the liner type can pass over the bar and be at her dock in 45 minutes from crossing the bar; in other words, the only port affording a broad channel almost straight and not over six miles in length. In nearness to the open ocean Charleston excels even New York. Less depth and sharp turns in the channels from the ocean into the ports of Wilmington, Savannah or Brunswick, make it impossible for vessels as large and as long

to be operated into those ports. Indeed, none of these channels, under present conditions, or under conditions that are remediable, could handle larger ships than are now handled. The depth and width of the channel into Charleston, I am informed, is equal to that of Baltimore, and the channel itself is deeper than those into Newport News and Norfolk. It is the only port in the Middle South Atlantic Seaboard that does not require two tides for a large vessel to enter and clear upon. What this fact would mean for the development of this port as a coaling station and as a dry dock station, I need not attempt to say. Charleston is the one port on the South Atlantic coast that occupies a position commanding the attention of shipping from this country as well as U. K. ports and the Continent for coaling en route to the Panama Canal, which is the nearest port at present to our West Indian possessions. Ships bound to or from Europe in transit would prefer, aside from the easy access and egress, to put into Charleston for coaling and dry dock, infinitely to risking dangers of Hatteras in order to enter Norfolk. The writer of the adverse report possibly has not been aware that there is every indication now of a first-class coaling station being established at the port of Charleston.

The port of Charleston has a commanding geographical location, the best on this Continent, perhaps, and this is said with no reference to Savannah, Porto Rico, Cuba, the other Islands of the West Indies or Panama, in relation to which Charleston is the premier.

Take the great group of rail gateway points, for instance. She is nearer by rail than from New York or Norfolk, to Kansas City, St. Louis, Louisville and Memphis, and almost 65 miles nearer to Cincinnati than is New York. She lacks only a few miles of being as near as either of these ports to Chicago—the air line distance being about the same. She is 146 miles nearer to St. Louis than is New York, and 385 miles nearer Memphis. Again, Charleston is 125 miles nearer the center of population of the United States than New York.

Artificial conditions created by the nine Northern trunk lines are carrying a volume of business to the termini of these lines. Inevitably, when justice is forced, the main artery of freight traffic must follow the actual short haul. There is no reason in all justice why Western wheat, flour and corn and many other products should not seek the natural short haul outlet for ex-

port. The same thing is true of imports that go to the same section through St. Louis, Kansas City, Louisville and Cincinnati. The trunk lines have wisely, from their standpoint, and successfully, used every endeavor to concentrate all export and import freights at their respective ports.

With long hauls made possible through the port of Charleston, conditions now existing are likely to change with startling rapidity. It suffices to say, also, that no other South Atlantic port is so located in its relation to the ocean that it can for many years become even a competitor of Charleston, with railroad traffic conditions readjusted on the basis of the regular export and import steamship lines from Charleston to European points. In past years grain was shipped to Charleston, but there were no ships sufficiently large to handle the business at a profit.

Returning for the moment to the question of coal, which is a vital one, Charleston is immediately taken out of the class of all other South Atlantic ports, and probably eventually will be raised above the class of some of the North Atlantic ports. You are doubtless aware that permission has recently been granted by the Interstate Commerce Commission to the Carolina, Clinchfield and Ohio Railway to make a low rate of their own coal to Charleston, "with a view to the development of their port as a great shipping center." This action involves plans, I am informed, for the building at Charleston "of an iron furnace to use foreign ore" and by-products, coke ovens to provide the coke for the furnace, the surplus gas to be used by the Charleston Gas Works, while the ships carrying coal from Charleston to the West Indies and South America are to return with iron ore and other cargoes." It is announced, too, that the Clinchfield people contemplate spending some half million dollars in order to make Charleston a coal handling port, and that their plans involve the construction of an elaborate coal elevator system. You are, no doubt, however, thoroughly familiar with the undertaking that the Clinchfield corporation is now entering upon with its direct line from the coal fields via Spartanburg, the Southern Railway and Columbia to Charleston, and if you are not, I beg to direct your attention to the accompanying map showing the location of the coal fields and the route to the coal station in the harbor of Charleston. Were nothing else taken into consideration than the recent completion of this Clinchfield line across the mountains from the coal fields to Charleston and the granting of the low

rate on coal to that port, Charleston is outside of any just or equitable comparison with her sister ports on the South Atlantic. The same thing, I might repeat, is true in regard to time consumed between the ship's entrance and exit. This development on the part of the Clinchfield Company also carries with it the establishment of many enterprises, involving the upbuilding of a commerce of a substantial character. Indeed, on every hand there is every indication that instead of "nothing," as stated in the findings, there will be quickly "something" "in the amount of character of its commerce to justify the Federal Government in at least spending a little money to make possible that which it cannot make possible by reason of natural barriers at any other port."

There is one other feature in this situation that no doubt will thoroughly impress any impartial judge: Charleston, as I have pointed out, is the nearest port to the Panama Canal, which, ere many years, is to be opened and afford to the world new avenues of trade; via New York from Chicago to Panama it is 2,881 miles; from the same point via Charleston to Panama it is 2,331 miles. There is a distance in favor of Charleston of 803 miles in the case of Kansas City; 754 miles in the case of Louisville, and 723 miles in the case of St. Louis. Establishing a similar comparison from the same point via New Orleans and Charleston, from Louisville via Charleston, there are 85 miles in favor of Charleston over New Orleans, and the greatest difference in any of the other cases in favor of New Orleans is only 216.

When we come to the mileage from all principal points, ranging from Chicago on down through the cotton belt as far as Montgomery, Ala., and Augusta, Ga., to the Atlantic ports, you find differences in favor of Charleston as against New York, ranging from 65 miles to 673 miles, all of these differences being over 100, except the instance of the 65 miles cited. Chicago alone gives a slight difference in favor of New York. Taking the same thing from these points to Norfolk, Chicago, Cincinnati and Greensboro, N. C., are the only points that are in favor of Norfolk, whereas the shorter mileage shows from 16 other principal points in favor of Charleston all the way from 26 miles to 400 miles, and the majority of them being over 200 miles and above.

Savannah, from the standpoint of geographical location, would be the only natural point of competition, and the mere fact, without invidious comparison, that Savannah has a long and wind-

ing river channel of approach that would scarcely permit of the handling of a ship of liner length, a fact which you gentlemen of the engineer corps know full well, virtually eliminates Savannah from being considered in the class of Charleston as a strategic point for commerce or for war.

I have not dwelt upon the fact that the U. S. Naval Station and dry docks are at Charleston, which naturally would be considered in removing Charleston from the class of the other points you have named, for the reason that you gentlemen of the army, thoroughly familiar with the necessities for naval as well as land operations, are better acquainted with that matter than myself.

I wish only to say this in conclusion, and that is that the grounds upon which the adverse report have been made in the light of the real facts as to the needs of the country, and as to the possibilities for the expansion of trade and commerce, are so completely out of gear as to seem untenable. It seems to me that the time has about come when the Nation cannot go much further down the scale of neglect of her commerce. But when we consider the enormous toll that is now being levied upon the producer of this country's principal agricultural export crop by combinations in control of the transportation facilities to the markets of the world, it should seem to everybody that the Federal Government and its representatives should be broad enough to look economic facts in the face, and by the expenditure of a few hundred thousand dollars provide at least that which can be of genuine service to the Nation at large, and have it ready for utilization by the time the Panama Canal is open. A matter of three or four hundred thousand dollars expended in this way would be worth, in my humble opinion, millions of dollars in connection with the opening of the canal.

I trust that you will not think that I have written this in any critical manner, for that has been far from my intention. It has just happened that it has fallen to my lot to go most exhaustively into this very subject, and knowing conditions as I do, and feeling that you and the Board of Engineers would like to know how Southern interest as represented in this leading Southern manufacturing and agricultural State, feel in regard to this matter, I have written you frankly and freely, and for no other reason than I am deeply interested in the fullest development of any and everything that makes for the good of our common country.

Very respectfully yours,
E. J. WATSON, Commissioner.

Col. Klingman in his report in July recommended only the amount necessary to complete the 28-foot project.

Valuable work has been done by the U. S. Government upon all the navigable waterways of the State during the year, as shown in the annual report of the Chief of Engineers, recently issued. Commerce upon all these streams has been steadily increasing, and there is prospect of a material extension of the freight service on the Congaree River to Columbia.

GOOD ROADS.

Most particular attention has been given throughout the year to the question of public highway construction and maintenance because of its importance to the agricultural commerce of the State. Never before has there been so widespread an interest in this matter among the masses of the people. Elsewhere recommendations have been made looking to an abandonment in part of the present system of building and maintenance, which is crude and almost devoid of permanency. In some counties bond issues have been voted by the people and effective work is being done by highway commissions provided for under such bond issues. The U. S. Office of Public Roads has rendered material aid and the Department of Highway Engineering at the University has been doing excellent service.

During the year the two main highways through the State—the Capital-to-Capital Highway and the National Highway—have been firmly established, but both are sadly in need of maintenance work. The first of these is to be the link in this section for the Quebec-Miami Highway, now being put in excellent condition for travel from Canada to South Florida.

Arrangements have been perfected through this Department for the early and modern sign posting of all main interstate and principal inter-town public roads in the State.

During September, from the 4th to the 16th, the Southern Railway Company and the U. S. Office of Public Roads conducted a good roads campaign in the State by means of a demonstration train, which visited 21 central points with fine results.

Since Dec. 16 the Atlantic Coast Line and the Federal Office of Public Roads has been conducting a similar campaign, which will conclude on Jan. 13. All the Coast Line territory principal points are being visited.

PUBLIC ROAD STATISTICS.

This year this Department has endeavored to collect intelligent statistical data, revealing the condition of public highway construction in the State. Herewith is given the tabulated result of the effort, showing a total of 5,127¾ miles of improved roads, out of a total mileage in the State of 47,888. Of the improved mileage, 4,527¾ are sand-clay, or reported as such, 111 stone surfaced, 427 gravel surfaced, and 62 shell surfaced.

Despite earnest efforts made under the provisions of two Acts requiring officials to furnish information of this character when called upon by the Commissioner, the County Supervisors or Road Commissioners of Barnwell, Beaufort, Clarendon, Colleton, Dorchester, Fairfield, Horry, Kershaw, Lancaster, Lee, Lexington, Marion, Marlboro, Saluda, Spartanburg and York, failed to make any reports, and the figures given in the table for these counties are estimates based upon the reports filed in 1909.

WORKING OF PRESENT SYSTEM.

As indicating some of the highway construction problems under the present rather disorganized and happy-go-lucky system in vogue, the extracts from letters from supervisors, accompanying their reports, are valuable.

Supervisor McBride, of Florence, in submitting his report, writes: "You will note at the head of the schedule, sand clay mixture one hundred or more miles, answered. Will say that we have built two hundred or more sand-clay roads in the last ten years; a large per cent. of this work has gone to pieces from different causes. The main cause is the lack of proper material for building, our clay being a chalky, yellow substance, without body and proper texture for road building. Our sand being more of the flour-like loam and not the coarse sharp kind for the proper construction of sand-clay roads. When properly mixed they make a good road for the time, but will not stand much pressure; as they go to pieces in either extreme seasons, wet or very dry. We have spent in the last ten years from \$15,000 to \$18,000 per annum, and are now laying plans for a greater expenditure."

Supervisor Johnson of Georgetown says: "Replying to your request of September 30th, for information of building and maintaining public highways in Georgetown County, will say that

there is a total of about 1,100 miles, 250 miles of sand clay mixture and 12 miles of shell road. We have no special road or highway levy for the maintenance of the general county fund. Our cost for 1910 was \$7,100. We have no free labor commutation tax of \$2.00 for able-bodied citizens. We estimate that labor performed by the county during 1910 is worth \$12,000 to county. Total amount expended in money and labor in 1910 was about \$24,300. Impossible to ascertain the cost per mile of building roads as we have never kept a separate account. You know this county is full of creeks, rivers and branches, that it necessitates lots of causeway, bridge and ferry work; therefore it is almost impossible to get the average cost per mile of any kind of improved highway. The general conditions of roads are very good. We maintain 12 fee ferries in the county and have about completed all dams and causeway work, except in Georgetown and Charleston Counties and through Santee and the one between Georgetown and Horry Counties through Pee Dee Swamp."

Supervisor Humbert, of Laurens, writes as follows: "In Laurens County we have no funds provided for what we would call permanent improvement, the major portion of our funds being required from year to year to keep our common dirt roads in passable condition; we have not, therefore, been able to build a methodically constructed road of sand-clay, gravel, or other improved road for any great distance at any one time or place, as for instance 4 or 5 miles at a stretch. We have, however, from time to time, as occasion would permit, at different points, hauled sand on some short sections of some of our worst clay roads in sections ranging from one or two hundred yards to possibly a mile, but as no record was kept of distances it would be difficult to compute the total mileage. While our work is done in such a way that it is almost impossible to make a systematic report of same, still we have done a great deal during the past year in the way of widening and draining our roads looking forward to putting down the surface when the funds may be available."

Engineer Eaddy in his report for Williamsburg County says: "Relative to our public highway work, will say we are just now realizing a general interest throughout the county that bespeaks better roads in near future. We have begun to build instead of only repairing. We will endeavor to connect with our adjoining counties the most prominent places by most prominent roads

among us to help speed the day when townships, counties and States may enjoy in common the great benefit of rural connection. Roads generally sandy. Am claying some on roads of first importance, using chaingang principally. Have constructed 20 miles this year. I am using culverts, when practicable, instead of lumber for bridges. General interest lively. Will have more money next year."

From Orangeburg, Supervisor Felder reports: "Under the law, our township road fund has to be set aside for the use of the various township commissioners of the county for repairing roads. This township road fund is made up from three sources, as follows: Commutation tax, \$7,998; one mill tax, \$6,657.63; mileage, \$3,190; aggregating \$17,845.63. The law also places the chaingang entirely within the control of the Supervisor and he distributes its work over the county according to his best judgment. The amount expended in keeping up the chaingang, as the report shows, is \$11,536.18. This year \$17,845.63 spent by the township commissioners, together with the \$11,536.18, spent by the Supervisor, is all that the county used during the current year for building and repairing roads."

Supervisor Martin, of Marion, reports: "I regret I am unable to supply the information requested in your favor of 30th ult., for the reason that the chaingang was on the first of last March transferred from the control of the County Board of Commissioners to the Marion County Road and Highway Commission, created under an Act of the Legislature authorizing it to collect, apply and expend the money realized and to be realized under a bond issue of \$100,000.00. In the tax levy this year for Marion County only one-fourth of the amount appropriated for Roads and Bridges remained at the disposal of the County Board of Commissioners, the bulk of this levy being payable to the Road and Highway Commission for support of the chaingang. I have therefore been able to do very little on road improvement, my efforts having been confined to the repair of bridges, besides the work I have been able to get out of the road hands subject to duty. You perceive I am not in a position to make anything like a full report."

Supervisor Murray, of Berkeley, in making his report says: "We have built but very little sand-clay roads and none of the others. The old plan of working the roads is still in vogue here, with nothing permanent, though our people are becoming more

interested in good roads, and we hope in the near future to be able to make a better report. We have purchased a traction engine, which is working well, and we are doing some fine work now in need of repair, though we only commenced since August last."

Data regarding what you wish to know is very meagre prior to that time (August, 1911), and even at the present time Dillon County is only beginning to get its affairs connected with road work into something like systematic shape. Another year we hope to be able to furnish you with exact figures at a moment's notice.

Since August the county chaingang has been occupied almost entirely with building a causeway over the flood lands to the Little Pee Dee river. This is a heavy piece of work—many times heavier than anything else of the sort ever attempted in the county—and is just nearing completion. This work serves as no guide to the progress that this same outfit can make under average conditions, so the figures presented to you are as nearly accurate as we are able to place them.

The general policy being followed by this county is to plan and build an intelligent and comprehensive system of roads, doing permanent work with the gang, and repairing and patching with the commutation taxes. The patrol system will be used for maintenance, probably. A complete map of the county is being made by the Highway Commission, and this is used to locate roads in their proper place where they may serve the public with the maximum possible usefulness for all time. As good road building is yet in its infancy in Dillon County, we can give but little data for the past, but hope for great results in the future.

Yours truly,
EDWIN M. WAYLAND, C. E.

THE AUTOMOBILE.

One of the greatest agencies of modern civilization is now entering generally into the commercial and rural life of the State. The use of the automobile and the motor truck is no longer confined to pleasure purposes. Farmers all over the State, realizing the great value of the motor in bringing the distant farm near to the town and city, are purchasing machines generally and using them in their business with marked benefit. In the cities and towns motor trucks are rapidly taking the place

of horse-drawn delivery wagons in the prosecution of commercial business, and throughout the State inter-town and town livery services have been established. There are now something over 6,000 motor vehicles in constant use in the State, and they may be met on any public highway. They are wielding a great influence for good roads, and as the man residing in the country makes their use more general just so rapidly will the sentiment for a proper and intelligent system of road construction and maintenance develop.

South Carolina at present has an inadequate and crude system of registration of motor cars. This Department has recently endeavored to get accurate reports as to the registration in the several counties of the State, and has found that in some counties practically no attention is paid to the registration either by owners or the authorities. In one city three machines all assigned the same number were found. There should be an intelligent State-wide registration, with penalties for failure to register, and providing for the keeping of proper and accurate records. A registration fee of \$2 per machine could be imposed, payable to the State Department of Agriculture, or any other authority, and the proceeds could be applied to the conduct of the registration work, and to the salary and expenses of such a public highway engineer as is recommended elsewhere in this report. If a complete registration of all machines in the State were thus provided for immediately, a sum sufficient to maintain effective highway engineering work could be raised at once, without any direct appropriation from the State Treasury.

The following is a summary of the reports as to the number of automobiles now registered in the several counties of the State of South Carolina, this summary being given for the information and guidance of the General Assembly in shaping any legislation that might be deemed wise:

XII.—COMMERCIAL FEED STUFFS DIVISION.

When the Commercial Feed Stuffs Act became effective in the spring of 1910 the scope of the operations of this Department was greatly extended and the most responsible duties that the Commissioner has yet had to perform were imposed. The operation of this law involved the safety and conservation of both human and animal resources of the State, hard, earnest organization work, and the delicate task of enforcing provisions of law to which the people themselves were unaccustomed and of the character and purposes of which they were totally unfamiliar. It is with some degree of pride that I am enabled to say that the campaign of education conducted in connection with the enforcement of the law has been so thorough that the people now thoroughly understand the great measure of protection that this law throws around them, and are lending their most earnest support to the inspection forces. It is equally gratifying to know that dishonest shippers of commercial feed stuffs and grain dealers have been finally convinced that when they attempt to ship inferior material into the State they do so at the almost certain risk of losing it. In this way this class of goods has almost disappeared from the markets of South Carolina, and the marked improvement in quality of goods is a subject of common comment.

Conservatism and fairness have marked the course of the Department in dealing with violations of the law, but whenever it has been necessary to bring the law down hard upon an intentional offender it has been done without fear or favor.

RUNNING OUT SPOILED CORN.

The work of this Department in the matter of the campaign against rotten whole grain corn from beyond the borders of the State, which has so long been dumped upon the Southern States, has attracted the most widespread attention. Indeed, this State has the only law in this country today that takes cognizance of this flagrant wrong to man and beast, and the most effective use has been made of the provisions of the Act in this regard. Shipments of this class of corn have almost entirely ceased, after a hard, uncompromising fight, involving threats by many shippers to withdraw from the South Carolina trade had been made and those making such threats had been invited to make them

good if they chose to do so, and had been further advised that they could do as they pleased, but so long as they shipped rotten corn into South Carolina it would be taken and destroyed after proper and conclusive examination.

CORN MEAL AND PELLAGRA.

Of even more far-reaching importance, inasmuch as it affected human life, and because of the evidence of its connection with the dread disease of pellagra, now rampant in the State, was the campaign against meal ground from spoiled corn. It was only when it became manifest that this State was being flooded with this class of stuff, when agents were found boasting that if they could not sell the whole grain of corn to merchants for animals to eat they would haul it just outside the State, grind it into meal, and ship it back, thus making the people themselves eat it, that most active steps were taken to stamp out the practice which was being so openly indulged in. Nothing could be done with the matter, however, until a certain experience had been gained in the handling of rotten corn itself, and an exact scientific method of test and examination had been introduced, and, in this respect, the Department's work was along an untrod path, so far as the United States was concerned. It was difficult, too, for the reason that meal made of rotten corn was whiter and prettier in every regard than that made from sound corn, and the people had been so long accustomed to buying by appearances that they found it difficult to grasp the essentials.

THE MIDDLE GROUND.

The investigations made in the State laboratories maintained by the Department along the line of spoiled corn and corn products have resulted in perhaps the most notable advance in this respect that has been made for many years.

Assuming simply that rotten food stuff was dangerous, and not assuming that pellagra was caused directly by the consumption of spoiled corn, the Department has felt that the indictment was so strong against the spoiled corn (that the disease and the consumption of spoiled corn had never been successfully divorced by the scientists) that it was warranted in taking the safe middle ground indicated, and proceeded to handle the matter vigorously. Special investigations involving properly isolated sections in which pellagra prevailed extensively were most carefully con-

ducted and much valuable data which is strong evidence of the connection between the disease and spoiled corn has been obtained. Many of these essential facts were demonstrated by the Commissioner in an address upon the subject at the last National Pellagra Conference held in Columbia.

A BUSY YEAR.

When the General Assembly was last in session the organization work of this division was just about completed and the work of inspection of the general run of commercial feed stuffs had been just gotten thoroughly working. The laboratories had just been established, and had not yet been equipped for making the scientific test of corn known as the "Acidity" or Alsberg test, a test already thoroughly demonstrated and put into practical use in Italy and Austria. Before the General Assembly had adjourned the complaints of spoiled corn began to come in rapidly, and the thorough equipment of the laboratories for the work was rushed forward. By March, 1911, the work with corn had been well launched. All kinds of troubles with out-of-the-State shippers were encountered, efforts at intimidation were made, and there was really a howl from the grain dealers who heretofore had been having their own undisputed way in the furnishing of any kind of stuff they saw fit upon our unsuspecting people. Nearly half the year the Commissioner was kept busy with these two campaigns on corn and corn meal and products. The results of the examinations published in the Department's bulletin show what was found, and the great necessity for the time devoted to the matter.

EFFICIENT FORCES.

The laboratory force has remained unchanged and steadily increased in efficiency. The laboratory has been finally equipped in a most up-to-date manner, and is today one of the best in this regard to be found in the South. The inspection force is no larger than last year's force, and has steadily increased in efficiency also. The personnel is the same with one exception. All of the inspection work is done with only four men, one of whom remains in the offices most of the time looking after clerical and executive details and holding himself in readiness for any emergency call. Another travels by automobile covering the outlying sections that cannot possibly be reached by train. The

others are constantly on the move from one end of the State to the other, and at certain seasons do almost double work.

The effort has been made to operate the law upon a minimum of expense and only the most careful and painstaking as well as competent men, particularly equipped and adapted for the work, have been employed.

RICE PRODUCTS.

Second only in its troublesome nature to corn and meal has been the control of rice products. Nearly all of this business comes from the Southwest, the South Carolina milling industry having dwindled badly. There are many vexatious problems connected with this matter of rice products and they have not yet been solved to the satisfaction of the Department.

For the receipts from the tonnage tax on feed stuffs and the expenditures your attention is directed to the appended detailed statement at the end of this report, showing a balance on hand in the State Treasury on January 1, 1912, of \$5,489.92.

There is no amendment to the law that has appeared to be necessary. It is in accord with the best laws in the leading States, in all essential particulars, is working well and is doing what after all is the chief object, affording protection to the people.

WORK OF THE LABORATORY.

Below are given condensed summaries of the samples analyzed and examined in the laboratory since it was established and put into operation. The summaries show that a total of 751 samples have been examined up to Jan. 1, 1912. An examination of the figures shows what necessity there was for the work.

The corn meal summaries show that 81 out of 225 were found to be made of rotten corn. Indeed, when the State was first gone over and samples of corn meal were drawn in the open market it was found that nearly 90 per cent. of the meal being sold in the State was made of spoiled corn and was really dangerous. Of the last 25 samples examined recently only one was found to be of inferior quality. As shown by the table, as soon as the inspection was started improvement in quality commenced forthwith.

Only 9 out of 33 samples of corn of which complete tests were made were found sound.

However, here are the summaries:

GENERAL FEED STUFFS.

Total Number Samples Analyzed to January 1, 1912.

DAMAGED CORN WITHHELD FROM SALE BY DEPARTMENT.

1910..16 shipments.....2,969 bushels.
 1911..24 shipments.....4,957 bushels.

—
 Total..40 shipments.....7,926 bushels.

During year 1911, Department seized 981 bushels, and allowed 3,976 bushels to be shipped out of the State upon agreement not to be returned in any shape.

These shipments were made from Cincinnati, Nashville, Richmond, Baltimore, Norfolk, and other middle western market points.

SPECIMEN CASE.

The following letter gives an idea of the plain warnings given to shippers; in this particular case the corn was confiscated and destroyed:

(Copy.)

Feb. 8, 1911.

*Messrs. W. F. Richardson, Jr., & Co., 210-216 South Seventh St.,
Richmond, Va.*

Gentlemen: This is to inform you that this Department has today ordered withheld from sale to the consumer 225 sacks of corn, sold by D. K. Wright, representing your house, and shipped by you into this State to the E. Sternberger Co., at Clio, S. C., pending a chemical and bacteriological examination under the law as to whether it is in such damaged condition as to be unfit for food purposes. Samples of this stuff have been carefully drawn, and a most careful examination will be made. A superficial inspection so far shows this to be the worst quality of stuff that has ever been sent into this State.

I thought that I had advised your firm fully some months ago of the provisions in the South Carolina law, placed there purposely to prevent the shipping of spoiled or damaged corn into South Carolina. These provisions were put into the South Carolina law for the specific purpose of affording protection to the people of this State, and it was made this Department's duty to enforce the provisions of the law. For your information, I would say that, though we were lenient when the law first went into effect, we propose to exercise every authority given under the law this season to put a stop to this practice, and I would strongly advise you, in making any shipments into South Carolina, to see that you ship nothing but pure, first-class corn. If anything else is shipped, and the examination shows that it is sufficiently damaged to come within the provisions of the law, it is going to be confiscated without question or without fear or favor in the exercise of the sovereign police power of the State.

I might say for your information that this Department and its experts are now thoroughly equipped with all the apparatus and methods of testing corn that are in use in such countries as Italy

and Austria, and we are in a position, upon a proper examination, to go upon the stand and give expert testimony of exact scientific character. The mere theories of the trade and specious arguments about heated corn will no longer prevail, for our laboratory equipment is now such as to give results, which are competent testimony in the courts. I might say, for your further information, that I, personally, had the opportunity to study these scientific methods, where they are largely employed, and they are going to be put in full practice in South Carolina. This Department does not care to be continually bothering with the holding up of shipments from any concern, and would much prefer the co-operation of all shippers, but any attempts to put any damaged or spoiled corn coming within the meaning of the South Carolina law, is going to be met by prompt and decisive action, and brokers or agents selling such stuff are going to be promptly indicted. I have written you just thus plainly, for I feel that you should be given thorough warning as to future shipments.

In the present case, it is under investigation, and when the report is made, the action of this Department will be governed accordingly.

Very truly yours,

E. J. WATSON, Commissioner.

For complete data as to all other seizures, see Division Bulletin.

SOME ACTUAL RESULTS.

In the State of South Carolina, for the first time on the American Continent, an application of the careful systems of chemical, bacteriological and biological examination of spoiled corn has been put into effect. In starting these examinations, we first put through the same test some of the 1910 home-raised product, a fair average, and we found the moisture and acidity to be, respectively, 9.50 and 13 per cent. The Federal Government, in examining some high grade corn from different parts of the Nation, found the moisture to run between 7.60 and 10 per cent. and acidity between 13 and 18 per cent. The South Carolina product showing moisture at about 8 per cent. and acidity from 13 to 15 per cent.

On February 21, 1911, we seized the carload of corn at Clio, referred to above; corn that had been shipped from the West via Richmond into the State. When put through the test, it showed only 3.37 per cent. of fat, 12.64 moisture and 60 to 75 cc. acidity,

when for good corn, acidity should range from only 10 to 15 cc. The specialist making the examination reported: "This corn is unfit for consumption of any kind." On the same day we seized a carload of corn, coming from the same source, by the same route, at Bishopville, and we were confronted with 14.80 per cent. moisture, 3.13 per cent. fat, acidity test showing 80 cc., and the report of the experts was "about two-thirds of this corn is spoiled, and, therefore, should not be used as a feed in any way."

These cases are but fair samples of corn that we have confiscated in South Carolina under the law, taking cognizance of whole grain when so damaged as to be unfit for feed. At that time we had been unable to touch the meal situation, but expected it to reveal a condition of affairs far worse. It would be difficult to picture, from a scientific standpoint, the danger to both man and beast that our people have been, and still are, running in those sections of the country that are still buying corn from the old corn belt through shippers who do not care what they put upon the market so long as they can get a price for it. We have authenticated cases reported of deaths of mules and horses, and of hogs, immediately following the feeding of such stuff, and the reports come frequently.

MEETING THE GRAIN DEALERS.

All during the spring protests against the South Carolina methods of examination poured in from grain exchanges and dealers, and, finally, when it seemed impossible to answer all inquiries, I determined to go to Nashville, with the State Chemist, and meet representatives of all the Grain Exchanges of the Middle Western States, at a conference to which I had been invited, the conference having been arranged by the Nashville Grain Exchange.

This conference saved much time and future correspondence, and since then there has been but little trouble. On my return from Nashville I made the following statement: "This conference was to clarify the atmosphere in regard to the new provision of law that we are enforcing in this State, controlling and shutting out of the State the rotten corn and meal made from rotten corn that has been shipped in here so long to such great damage to both man and beast. We have been, during the spring, gradually tightening the lines on this class of stuff and making confiscations, and the Grain Exchanges that have

been doing all of the shipping knew absolutely nothing about the Austrian method of examination and the Alsberg test, which we are now employing to obtain exact scientific information as to when stuff is so damaged as to be dangerous. We went there armed with typical samples of the products that had been shipped from different points, together with the results of the examination in each. We were in a position to show the man who had himself shipped a corn graded, by his Exchange, as a No. 2, what it was, and in nearly every instance he had only to take a look to see that it was not even a No. 4. It has been my fortune to face many an audience in all parts of the country, on all kinds of subjects, but I have never faced an audience of more interested men, nor have I ever had questions directed at me in as great number, and with as much rapidity, as did these men who have been making this business their life work. Finally, however, the whole thing was elucidated to our mutual satisfaction, and the grain dealers and myself, as the head of the Department in South Carolina, now thoroughly understand one another. One thing that they understand is, that, if dangerous stuff is shipped into South Carolina, it is going to be confiscated without fear or favor. They understand also that this State intends to throw as much protection around the honest grain dealer or broker or commission man as it does around any one else, and that there are to be no indiscriminate confiscations, but that every confiscation will be based directly and solely upon the result of the expert examination, and that only.

"It was gratifying to me that Mr. Jno. F. Courcier, Secretary of the National Grain Dealers' Association, came down from Toledo, O., to hear the whole thing, and that he and a number of others did not hesitate to express the belief that a similar system of examination ought to be in operation in every State. Mr. Courcier believes that it will be one of the greatest things that can be employed to drive dishonest competition out of the field in the grain business, and put the entire grain business upon a far better level than it is today, not taking into consideration at all the protection to life that would be afforded. It was gratifying to me, also, to find that the work this Department has been doing in its laboratories, in regard to this important matter, has been attracting most wide-spread attention, principally in several of the leading middle Western States, such as Illinois, where pellagra is prevalent. And, as yet, you

know, nobody has been able to definitely separate the disease of pellagra and the utilization of the spoiled corn or spoiled corn products."

THE FEED MANUFACTURERS.

Going on from Nashville, at Indianapolis, Chief Chemist Summers and myself met the members of the American Feed Manufacturing Association, and discussed with them many matters in relation to the feed inspection work now being done here, and as to features of the manufacture of feeds that needed immediate consideration. This association was composed of manufacturers from all over the country, and much information that will be most beneficial to the people of this State was obtained.

RESULTS OBTAINED.

Soon after the Nashville Conference the Department received letters similar to the following from a number of shippers:

"We are in receipt of your favor of June 26th and merely write now to thank you very kindly for sending us the information regarding the acidity test. We are glad to tell you we will be able to make these tests in our own laboratory, and will take a great deal of interest in making such tests at frequent intervals."

THE ACIDITY TEST.

Almost immediately after the conference the National Grain Dealers' Journal requested the Department to prepare a special article on the subject of spoiled corn and the method of examination being employed. This was done and the article appeared in the July issue, being also issued by the Department in bulletin form. It is reproduced here because of the information contained.

In view of the great ignorance of modern scientific exact methods of determining the deterioration of corn, to which you have called my attention, and to which my attention has been called more particularly by the character of letters that I have received from shippers in all parts of the Middle West, I am availing myself of the opportunity you afford to make this entire matter perfectly clear and to present the method of determination, which we are now employing in our laboratories, and using in connection with the standards for grading, fixed by the Grain

Dealers' National Association, the results in every instance as to percentage of spoiled corn and acidity running hand in hand.

When I asked our State Legislature, in the exercise of the sovereign police power of the State, to put a provision in the new law we were then enacting, which, by the way, is almost verbatim the law recommended by the American Association of Agricultural Chemists and Officials for use in all the States, I did so because of the fact that all around me there were dying by the scores horses, mules and hogs, whose deaths were traceable directly to the feeding of rotten corn, and all around me were people contracting and suffering from a loathsome and incurable disease, which the medical profession and all other professions and scientists had failed to connect, and have failed as yet to connect, with anything other than the consumption of spoiled corn.

The clause in the new law that I refer to provided for the handling of all whole grains when in such condition, as determined by inspection, to be unfit for food purposes, mixed or unmixed. Under existing standards and methods of grading on this continent, there was no means of determining definitely and accurately when the corn, or any whole grain was in such a damaged condition as to be dangerous to life. It was my official duty, therefore, to ascertain a scientific method of examination and inspection, which would determine with exactness the point of danger to such an extent as to make testimony, given after such an examination, so definite and complete from a scientific standpoint that it could stand the run of any Court, State or Federal.

It had been my good fortune to study, at first hand, abroad, the exact methods employed in both Italy and Austria, where these governments carefully control the quality of the corn, and suspected corn is examined by skilled government experts. Fortunately just about the time we had to undertake this work the United States Bureau of Plant Industry, having had O. F. Black and C. L. Alsberg, expert chemical biologists, at work on this subject, issued its Bulletin No. 199 on December 16, last, giving to the people of this country exactly the same thing in all of its detail, and backed by all of the world scientists who have been at work upon the problem.

The possibility that spoiled corn may possess poisonous qualities seems to have passed unnoticed in this country. Whether or

not spoiled corn is the cause of the disease known as pellagra, it was very clear that spoiled corn was as undesirable as any other spoiled food. As Alsberg says, "Here the economist, hygienist, and the agriculturist meet upon common ground. If the hygienist should condemn corn as corn it would react upon the agriculturist by narrowing the market for the country's chief crop. It is, therefore, of the utmost importance to the agriculturist that the deterioration of corn be investigated in all of its bearings in order that he may learn to avoid the cause of the spoiling of corn, and that the consumption of spoiled corn by man may be eliminated. Ultimately this will be to the interest of all classes, whether growers, middlemen, or consumers. To bring about this result it must be possible to detect deterioration in corn." It has long been recognized that it is extremely difficult to detect the spoiled grains that have been mixed with good corn, and it is even more difficult to detect the rotten material when used in the making of meal.

The United States authorities, after a careful study of the European methods, endeavored to present an exact method, enabling manufacturers of human food, public health officers and shippers of whole corn to judge of the quality of corn and corn meal. As the Federal officers say, in this country, where the examination will be made in most cases only upon the initiative of private individuals, many of the tests applied would often be of little service, because they require a considerable degree of chemical and bacteriological skill. What seemed to be needed in this country was an adequate test of so simple a character that it may be applied by the shipper, the manufacturer, the health officer or the consumer, in determining whether products or purchases are fit for food.

To quote Dr. Alsberg, "Such a test is thought by the writers to be the determination of the acidity of corn. This is a well known test in both Italy and Austria, where much stress is laid on its importance. In this work it has been found the most reliable means of distinguishing good from bad corn. All corn is somewhat acid, not necessarily to the taste, but to chemical reagents. Since the spoiling of corn is due to fermentation processes, in which acids are among the products, the extent to which this deterioration has progressed can be measured by the amount of acid present. It becomes necessary, then, only to fix a standard of acidity above which corn should be considered unfit for food."

We have adopted the exact uniform method, being now generally used as the most modern method known in the world, and, as I have said, the results from this method invariably run hand in hand, in our laboratories, at least, with the grading (percentage of spoiled corn) according to the standards of the Grain Dealers' National Association.

Carried out according to this method, the determination of the acidity of corn is easily made. Any pharmacist ought to be able to carry it out accurately, for it is far and away easier than to determine the acidity in gastric juice, a determination with which every physician is familiar. Graduates in pharmacy will find no trouble in detecting it, and it is suggested that shippers of corn and manufacturers of human food from corn, and other persons who do not wish to bother with these determinations, might have them done by the local pharmacist.

Before going further, as you request, I wish just here to incorporate, in detail, in condensed and simple manner, but in absolute completeness, the exact method that I have referred to, and which we have adopted, and are using today. As you will see, it is over the signature of this Department's Chief Chemist, who has had very large experience in dealing with the Middle Western feed stuffs in one of the leading Middle Western States in an official capacity:

METHOD OF DETERMINING THE ACIDITY OF CORN.

APPARATUS NECESSARY.

One graduated burette.

One or more 50 cubic centimeter graduated glass flasks fitted with ground-glass stoppers.

One or more 5-inch glass funnels.

One filter stand, or some appliance for holding funnel while filtering.

Three-inch filter papers, preferably folded filters.

One or more 25 cubic centimeter graduated glass cylinders.

If whole corn is to be examined, a mill is necessary—a drug or coffee mill will do.

REAGENTS NECESSARY.

Neutral Alcohol.—Such alcohol may be obtained from dealers in fine chemicals. If no neutral alcohol is at hand, it may be

readily prepared by the distillation of the ordinary 95 per cent. alcohol with the addition of unslaked lime. A few lumps of quicklime are put in a still or retort of copper or iron; the alcohol is poured in and the still connected with a water-cooler condenser. The so-called Liebig condenser is good for this purpose. The connections may be made with suitable bent glass tubes and cork or rubber stoppers. A receiving vessel is placed under the open end of the condenser to catch the alcohol. The still or retort is then heated with a non-luminous flame till the greater part of the alcohol has boiled over. All the alcohol can not be recovered because of the danger of burning the still. An ordinary kerosene can may be used as a still, the spout of the can being connected with the condenser. If no vessel suitable for use as a still is at hand, a glass distilling flask may be secured from a dealer in chemical apparatus. It is best to use those made of Jena glass. The glass must not be heated directly, but must be heated over a water bath in the manner of a double boiler. To accomplish this it is immersed up to the beginning of its neck in some sort of kettle filled with water. The heat is then applied to the kettle. The flask is touched only by the boiling water. Care must be taken that the flask does not break, for then there is danger of setting the alcohol on fire. A fire of this kind is best put out by smothering it with sand, a small keg of which should be kept handy.

A solution of phenolphthalein as indicator.

Distilled water.

Twentieth normal caustic alkali (NaOH or KOH). This, too, may be purchased from dealers in fine chemicals. Only small quantities should be purchased or made at a time, as it deteriorates in a month or two, even if tightly stoppered, when it should be replaced with fresh solution.

PROCEDURE.

If the sample to be tested is whole corn, it must first be ground until all of it can be passed through the 20-mesh sieve. For this purpose a fair sample should be made, taking it from different parts of the lot—the bottom as well as the top. The sample should not be too small. It should consist of at least 500 kernels. If it is meal, no further grinding is necessary, but the sample should be a mixed one, consisting of portions taken from different parts of the sack. Ten grams of the thoroughly mixed sample

are weighed out and transferred to a 50 cubic centimeter graduated flask fitted with a ground-glass stopper. The flask is then filled to the 50 c. c. mark with neutral alcohol of a strength of 85 per cent. by volume. After the addition of the alcohol the flasks are allowed to stand for twenty-four hours at room temperature, with an occasional shaking. At the end of that period a dry filter paper is placed in the glass funnel and the stem of the funnel brought over the 25 cubic centimeter cylinder. Then the clear liquid in the 50 c. c. graduated glass flask is poured into the dry filter and collected in the graduated cylinder. When this is filled to the 25 c. c. mark, the contents are transferred to a small flask or beaker.

The alcohol adherent to the inside of the cylinder is rinsed into the beaker with a little distilled water. From 100 to 150 c. c. of distilled water and a few drops of the phenolphthalein solution are then added to the liquid. The burette, which must be clean and dry, is filled to the zero mark with the twentieth normal alkali solution and the alkali allowed to run drop by drop into the beaker, the contents of which are continually stirred, until the first permanent pale-pink coloration of the whole liquid appears. The number of cubic centimeters run into the beaker is then read off on the burette. The number of cubic centimeters twentieth normal alkali solution used, multiplied by 10, gives the acidity of 1,000 grams (1 kilogram) of corn in terms of cubic centimeters, normal alkali. The results given below under the head of acidity are calculated on this basis. It is to be noted that on the addition of the 100 to 150 c. c. of distilled water to the 25 c. c. of alcoholic extract, some zein (the alcohol-soluble protein found in corn) is precipitated, giving a cloudy appearance to the solution; but this cloudy appearance wholly or partly disappears on the addition of alkali from the burette, so that the pink coloration which marks the end point of the operation is quite obvious.

Having determined the acidity of the corn sample in terms of cubic centimeters of normal alkali, the question that next arises is whether the acidity found is that of good corn or is greater than it should be. It has been found that the acidity number of sound corn ranges from 13 to 25; i. e., it required from 13 to 25 cubic centimeters of normal alkali to neutralize the extract from 1,000 grams (1 kilogram) of sound corn. It is necessary, however, to allow for a certain amount of variation in the corn, so

that 30 cubic centimeters may be fixed upon as a safe limit. This is the limit adopted by Schindler, the Austrian authority. The writers decided to calculate the acidity on a basis of 1 kilogram (2.2 pounds) to bring the figures into conformity with Fuller's scale, now very generally employed by bacteriologists.

We find at this laboratory that the per cent. spoiled corn and acidity test run parallel with each other.

A. C. SUMMERS,
State Feed Chemist.

The question of moisture is not of such vital interest, since moisture content is easily determinable. It is, however, of great concern to the shipper in that excessive moisture content is necessarily the chief factor in causing corn to spoil. Thoroughly air-dried corn contains about 12 per cent. Corn with a much greater moisture content has either been harvested too soon, as is often necessary in cold, wet seasons, or it was shelled without adequate curing on the cob. Storage, under conditions which do not protect corn from the weather, may, of course, increase the moisture content. Such corn is particularly liable, given a favorable opportunity, to heat and ferment, and then begins the fermentation and formation of acids, and the fungi that cause the trouble. Curing prior to storage should always be insisted upon by all people who purchase for shipment. Corn will then be in excellent condition, fit for any use. If the growers and handlers of corn for shipping purposes would dry the corn adequately it would result in a great addition to the wealth of the country without regard to the dangers to the public health of human beings and animals from the consumption of spoiled corn. There would be less deterioration in transit and storage, some of the millions of gallons of water annually hauled from the corn belt, in the form of moisture, would be left at home. Transportation charges would be most materially reduced, and, then, it should be remembered that the germ in the corn kernel is a living thing, and that immaturely curing this germ can reduce the food power of the product.

I do not feel that it is necessary to go into all of the bacteriological and other phases, for we are not making use of them.

We are, however, using the acidity test because of its absolute scientific exactness, and in cases of doubt (close figures) we are giving the benefit of the doubt to the shipper. We are using the

standards adopted by the Grain Dealers' National Association, and we do believe, from what we know of spoiled corn and its effect in this State, which up to a year ago was absolutely unprotected territory for all classes of commercial feed stuffs and had become such a dumping ground that millions of dollars of damage was being done annually to the agricultural consuming interests of the commonwealth, that we are getting at the thing in the right way.

I have explained to the trade time and again that we are not after enforcing any harsh measures, but, in the matter of affording protection under the law to the people of this State, we are unalterably determined to put a stop once and for all, in the exercise of the police power of the State, to dishonest dealers unloading upon the unsuspecting people stuff so rotten that it would not even grade a No. 4.

I showed to the representatives of the various grain exchanges at the meeting in Nashville specimens of the class of stuff we had taken off the market in this State, and I am willing to take any one to our warehouse and show them stuff that no honest man would dare attempt to feed to any kind of a living thing.

I have had one or two cases of agents of shippers, when the corn had been refused, even for the purpose of being fed to hogs, make the bald statement that he "would ship it back to a mill, grind it into meal, and send it back and make the same people, in the same community, eat it." Things had become so flagrant in this State that firm and decisive action was demanded and this Department, being clothed with the sovereign police power of the State, and disposed to exercise that power with exact justice as between all parties concerned, has adopted what is today the only known thoroughly exact test, and is applying it without fear or favor, even to the point of standing between the distant shipper and the local jobber or consumer who may try to make use of the law to beat down grades upon the allegation that the stuff received was of a lower grade than that the shipper agreed to send. This we have had in several cases.

To sum the whole thing up, we have simply done what every State in the United States should do for the public health and the public welfare, what the honest grain dealers and shippers of the United States ought to do for the sake of the standard of their own trade, what they ought to do to drive out the cut-throat competition of dishonest dealers and shippers, and what is the

only thing science holds today to force the producer to properly cure his stuff before he sends it out to go into the stomachs of man and beast. We are applying science for humanity's sake, and we are going to continue to do it until rotten food stuff is driven from the borders of this State, all the shippers in the United States to the contrary notwithstanding. Those shippers, however, are going to receive fair, honest and impartial treatment, and any man who ships corn into South Carolina that comes under the Grain Dealers' Association's standards, and grades A No. 3 or above, need have no fear of his stuff being molested by the authorities of this State.

Now, I trust I have made this matter perfectly clear. It is one of more far-reaching importance, as I said in the beginning, than even the honest shipper realizes. It is one affording ample protection. It is one making for the maximum benefit of the country at large, and tending to improve the quality of the products that we raise and furnish to our fellowmen and the people of other nations. It is one that demands the attention we are giving it, and, while at present South Carolina is the only State on the American continent that is giving this matter this full attention, I believe that in a very few years everybody concerned will see the wisdom of it, realizing its vast importance, and insist upon its adoption by every State in the Union.

AFTER CORN MEAL.

The Department had been preparing for some time to begin a line of investigation as to the quality of corn meal being shipped into the State, when the month of August came and brought some developments which resulted in the launching of the campaign.

Having in mind the conclusions drawn by the famous Lombroso, at the end of his book dealing with maize and pellagra, a bacteriological examination of some of the spoiled corn had been made.

Lombroso's conclusions were as follows:

"Finally, I have sustained as paramount preventive measures against pellagra: the drying of Indian corn and the exclusion of spoiled grain."

"Finally, I have shown that penicillium and aspergilli of corn are truly pellagrogenous but only when growing upon spoiled corn, from which they imbibe toxic substances; while, on the

contrary, when growing upon other plants or material, which have not undergone putrefaction change, they are absolutely harmless.

"In conclusion, having observed how one of the causes of pellagra arises from the fraudulent methods of millers, we have introduced with great advantage in pellagra-stricken districts a rapid hand-mill (Bramford) which furnishes fresh meal, in the necessary quantities for daily use, without recourse to the lethal products of the wholesale dealers. Here, again, sound Indian corn scores a point. This method, I believe, is worthy of trial and adoption in America."

The examination for the Department was made by Prof. H. W. Barr, Botanist at the State Experiment Station, at my request, and resulted as had Lombroso's examinations. His report was as follows:

"Since my return from the Institute work last week I have made cultures of corn samples Nos. 115 and 115A and find that there is an abundance of penicillium, macrosporium, mucor and fusarium on this corn. This indicates to me that the corn is pretty badly damaged. From this I would judge that it must have been damaged in storage as the fungi which I have mentioned above are saprophytic moulds which are common on grain which is stored in damp situations or allowed to heat. Am sorry that my absence caused delay in furnishing this information, but trust that it will still be of service to you."

A small dose of the toxin distilled from one quarter of a gram of corn meal found in the open market was found to be immediately fatal to the largest sized rat, as demonstrated at the pellagra conference.

CAUSE OF ACTIVITY.

On August 7 the following letter was received from W. E. Lindsay, Assistant Treasurer of the D. E. Converse Co., at Glendale:

"We have several cases of pellagra in our mill village and have been corresponding with Dr. Babcock regarding this disease. He suggests that we ask you to have the corn products as handled by the stores in the neighborhood tested, etc. We would be very glad if you could do this. If there is anything we can do to assist you, please call on us."

The Chief Inspector was sent to Glendale and full information as to conditions there was obtained and samples drawn.

It was found that the stores at Glendale had been buying their supplies regularly and continuously for over a year from the same mills in two other States, and selling the stuff to the people in the village.

Within the year all the cases of pellagra that had occurred had developed and there had been two deaths from the disease.

The first step of course was to carefully draw samples of the meal and grits. Our chief inspector did this in person, exercising extraordinary care. The samples were then placed in our laboratories and were put through the most careful and painstaking tests, chemically and bacteriologically. The reports filed by the chemist showed respectively 52 c. c., 40 c. c., and 40 c. c., of acidity under the Alsberg test, when 15 c. c. represents the acidity of good corn, and anything over 30 c. c. is of necessity considered unfit for either animal or human consumption. In other words, the corn products sold to the villagers were found to be dangerous and unfit for food, just as expected. The quality is just about the same as that of the goods found in the several cities from which samples have been obtained and have been tested.

The Department issued stop orders, withholding the stuff from further sale, and took every possible step to prevent any further marketing of such products. In the meantime still further investigations were begun with a view to getting exact information as to the source of supply of the corn from which these products were made, and as to the quality of such corn.

In each case the examining chemist reported that the meal was made from off-grade corn or had deteriorated since grinding and should not be used for human consumption.

SOURCES OF SUPPLY OF MEAL.

Chief Chemist Summers was sent to other States to look into the matter of the quality of corn being ground into meal. He reported:

“August 20, 1911.

“Dear Sir: As authorized by you, I have made an inspection trip through some of the other States in order to see the quality of corn and wheat which is being ground and shipped into South Carolina daily, and beg to submit the following report:

"Leaving Columbia Aug. 8th, I went first to Alexander, N. C., and was conducted through the Morris & Sheppard Mill by Mr. Morris himself. I found the corn that Mr. Morris had on hand to grade good No. 2, and he stated that this was the only corn used by him. He offered his bills for inspection, if necessary. I found Mr. Morris compelled to sell his meal and grits at least 10 per cent. higher per hundred pounds than the surrounding mills. He also sold his corn meal several cents higher and found himself unable to fill all orders sent in; in spite of this Mr. Morris further stated that it was known around there that a number of the mills in North Carolina and Tennessee ground corn into meal that could not be marketed as whole grain, and found it easy to dump this rotten stuff off on the unsuspecting people of South Carolina and other Southern States. I heard it remarked a number of times that it had been very easy to get rid of all the rotten meals and grits out there by sending it into South Carolina. I also learned from Mr. Morris that some of the mills bought up all of the rotten corn that could not be marketed as whole grain and mixed it with a little good corn and then ground it into meal to be shipped into South Carolina.

"After leaving Alexander I went to Johnson City, Tenn., and went through the Model Mill Co.'s mill. I was very courteously conducted through this mill, but it was some time before I could get the guide to the corn bin. When I did I could only see the corn which was being fed to the rocks. The corn which I saw was No. 2, but I learned that, while every car carried a Tennessee State certificate grading it No. 2, it would not hold up to this grade.

"After visiting this mill, while I found nothing out of the way, I was convinced as to what is being done with the rotten corn, which we have driven off of the market as whole grain, and saw no necessity to make further inspection of the quality of the stuff being ground and shipped into South Carolina, and sold as good corn meal and grits for our people to consume. There is but one thing left to do, that is, 'hew to the line and let the chips fall where they may.'

"On the train, on the street, and at the hotel, I heard people talking pellagra and wondering if it could be caused by corn products. A number of times I heard the authorities of South Carolina commended for doing more than the officials of any other State by trying to protect her people from this dreaded

disease and wish for the time to soon come when the other States would join hands in this great cause.

"I found 500 cases of pellagra reported in Tennessee and a number of these in Johnson City. Does this show anything? After all, whether or not pellagra is caused by corn products, it seems that the people of South Carolina should be protected from eating the rotten meal and grits from other States when they are helpless to protect themselves."

ACTION TAKEN.

As soon as this report was filed I issued the following to the public, following a general inspection of corn meals and issuance of orders withholding goods from sale:

"Pending a determination as to exactly what course will be pursued in the matter of this spoiled corn meal, I have today directed that stop orders be served upon each of the merchants in whose hands the stuff has been found, ordering it withheld from sale subject to directions from the Commissioner of Agriculture. This is being done in order to prevent any of this stuff being consumed by human beings.

"Under the Commercial Feed Stuffs Act of 1910 and under Regulation 29, promulgated thereunder by authority of law, this stuff is liable to seizure, and the man attempting to sell it to prosecution. The case, however, goes a little further than in the matter of rotten whole grain corn, which goes only to animals. The selling of this class of stuff is clearly in violation of Subdivision 6 of Section 3 of the Pure Food and Drug Act of this State, which would carry a fine not exceeding \$50 or imprisonment not exceeding 15 days, also Subdivision 6 of Section 7 of the United States law would lay the man attempting to sell it subject to a fine not exceeding \$500 or one year's imprisonment in a Federal prison, or both, upon the State's authorities reporting the case to the United States District Attorney for prosecution. It is thus seen that the matter is a far more serious one than any of the offenses directly coming under the Commercial Feed Stuffs Act, and it is a little difficult to determine exactly how far official steps ought to be taken.

"It has been the policy of this Department in the enforcement of these laws, looking to pure food for man and beast, to be conservative and to give all parties shipping in the stuff and parties attempting to retail it ample warning. This was the

policy pursued in connection with the suppression of rotten corn shipments in this State, and though it was necessary to make a number of seizures entailing pretty heavy loss on some shipments, sound corn shipments have been brought about without any great disturbance. Some time ago this Department announced through the press that the corn meals and grits being shipped into South Carolina and sold were going to be subject to inspection and examination, and a vigorous one at that, and there has indeed been what would ordinarily be considered sound warning. However, with this first batch of cases, it is probable with the serving of a notice on a shipment of this class of stuff must summarily stop to each manufacturing concern and with permission to remove from the borders of this State, not to be returned to this State or goods will be released or perhaps confiscated and destroyed. A second offense by the same company or shipper, or retailer, I do not hesitate to say, will result in prosecution to the limit under both State and Federal laws. A scientific examination, both chemical and bacteriological, of this stuff shows that it was either deliberately ground from rotten corn in such a bad condition that we would not permit it to come into this State to be fed to hogs, or else the product has assumed this condition since it was ground. There are indications also that the residue of ground corn used in distilleries has been worked over into the shape of meal and is being sold openly as such. The evidence that we are in position to present in any case of prosecution is exact and conclusive. In the meantime a most vigorous inspection is conducted throughout the State and samples being drawn by inspectors at the points visited, it being the purpose of this Department to push the work of eradicating this class from the State just as rapidly and vigorously as it possibly can be done. The reason for it is very plain, when it is considered that medical science has not yet been able to divorce a deadly disease that is prevalent in this State from the consumption of corn products."

CIRCULARS ISSUED.

During the year the following circulars were issued by the Commissioner:

CIRCULAR NO. 17.

To the Merchants of South Carolina:

It is now one year since the Commercial Feed Stuffs Act, which has been effective since May 1, 1910, being approved February 25, 1910, became of force and effect in this State. During the first year of the operation of this law, this Department has gone slowly and carefully and has endeavored by every possible means to acquaint the merchants, the jobbers and the manufacturers of Commercial Feed Stuffs, with the provisions and requirements of the law. I am happy to say that a vast majority of the shippers and all the merchants now seem to understand the requirements and are obeying them to the letter, to their mutual benefit, and with the result that the class of foods now being brought into South Carolina has been vastly improved. It has been our purpose, without taking harsh measures, except in cases where it was absolutely necessary, to let every one understand that this law was going to be enforced to the letter and that it would be to their interest to obey it. It has been our further purpose to bring about such an observance of the law and regulations as would put every commission merchant, broker, local dealer and merchant upon an even basis as to the quality of goods handled, thus ruling out of business all dishonest parties, and the kind of competition that has of itself had a great influence heretofore in the making of this State a dumping ground for impure and adulterated feed stuffs.

"Up to the present time, it has been the Department's custom, upon compliance with the requirements of the law and the rules and regulations, to release goods upon which stop orders have been placed, without penalties. There are a number of concerns, however, still trying to ship into this State, upon any occasion where they have reason to think the inspectors might not catch the goods, products that are clearly in violation of the law, and in some of these instances the thing is being done deliberately. This circular, therefore, is to advise you, in order that you may always see before accepting the goods that they are properly tagged, bear the guarantee analysis and are properly stamped, that you should take extra precaution along this line and insist absolutely upon goods being shipped you that will come up to the requirements of the law in every regard before accepting them. This should be done for your own protection, for, from this time onward it is the purpose of the Commissioner of Agriculture, when stop orders are issued, not to release any stuff (unless it is a clear case of

error) without the payment of all costs and expenses incurred in connection with the seizure. In other words, all manufacturers are being notified that the following clause of Section 7 of the Act will be fully exercised in each and every case where the showing is not absolutely clear that the goods got into the State by manifest error and without deliberate intention:

"The Commissioner of Agriculture, Commerce and Industries, however, may, in his discretion, release the feeding stuffs so withdrawn when the requirements of the provisions of this Act have been complied with and upon payment of all the costs or expenses incurred in any proceedings connected with such seizure and withdrawal."

E. J. WATSON,
Commissioner.

CIRCULAR NO. 18.

Columbia, S. C., Aug. 30, 1911.

To the Cotton Seed Industry:

As it is about time for your plant to begin operation for another year, this Department has thought it best to send each of you this circular letter, requesting that you read it carefully and give this Department your co-operation in the enforcement of the Commercial Feed Stuffs Act in this State. By so doing it will save both the manufacturer and this Department extra time, trouble and expense.

In many cases this past year our inspectors have found cotton seed meal in the markets, being offered for feed purposes only, without the necessary tag attached showing the guaranteed feed analyses and inspection stamp. Consequently there was nothing else for them to do but to withhold this meal from sale until the merchants secured the proper tags and stamps in place of the fertilizer tags.

This Department realizes that, owing to the ignorance of the persons making the orders, they do not state specifically whether the meal is to be used for feed or fertilizer purposes, but if the manufacturer will assist us in letting the trade know the importance of giving this information, when ordering, both the feed stuff and fertilizer laws will become more effective, and the friendly spirit between the Department and the manufacturers, which has prevailed in the past, will be materially strengthened.

Should the meal be ordered for both purposes, then the manufacturer can send meal, part of which bears the feed stuff analyses and part the fertilizer analyses; or should they desire they can furnish dealers with both stamps, and instruct dealers to place proper tag on meal before selling, as it is an easy matter to remove one tag and substitute another. This Department permits you to redeem inspection stamps at any time.

We trust you will appreciate the spirit in which this circular letter is written and will understand that it is the policy of this Department to do everything in its power to make the marketing of your product as easy as possible. We also trust that each of you will lend this Department your hearty co-operation as in the past.

Very truly yours,
E. J. WATSON,
Commissioner.

CIRCULAR NO. 19.

Columbia, S. C., Aug. 30, 1911.

To the Rice Products Trade:

This circular is addressed to you to advise you that from this date forward this Department will not, under any circumstances whatever, permit of the sale of any so-called rice flour which is a mixture of rice bran, polish and hulls, or any rice polish whatever in which hulls or chaff enter in any form. Any amount of hulls or chaff in excess of that consequent by the grinding of the whole seed will be deemed an adulterant, and under Section 7 of the Commercial Feed Stuffs Act of this State, will be dealt with accordingly, and the party offering it for sale will be proceeded against as provided by law.

This circular is issued in order that all parties engaging in the rice business in any form may receive due warning as to the course that will henceforward be pursued.

I beg to say further that after this warning explanations will not be considered and that prosecution will be based absolutely upon laboratory results, and will be immediately instituted.

E. J. WATSON,
Commissioner.

One of the reasons for this circular is shown by the following extract from a letter to a broker who wanted a mixed feed made of bran, polish and hulls, the letter being written by one of the largest manufacturers of rice feeds:

"We have again taken this matter up with our president, and he has positively decided that we will not offer any of this grade of feed. There is no question in our minds but what rice chaff will kill stock. The writer lost three or four head of mules and horses during the past three years while manager of the United States Mill, and he is satisfied it was caused by feeding a mixture of chaff and rice bran. While the stock did not die outright, this feed seemed to affect them in the back and caused them to be perfectly helpless, and once they would get down could not again get on their feet, and when put on their feet could not walk, and as a consequence we had to kill the stock and drag them away."

UNDER THE PURE FOOD LAW.

All complaints under the pure food law have been promptly investigated as far as possible, and the following sample report from Dr. Doyle of the laboratory indicates the nature of some of them:

"As per verbal instructions from you, I made the trip to Langley, S. C., on 8/7/11 to inspect the meat markets and conditions generally, they having been reported by one Mr. J. L. Farant as being in a very bad condition. Upon arrival in Langley I proceeded to find Mr. Farant, but no one in the town had ever heard of such a man. I inquired at the postoffice and at the mill office, but such a man was unknown there. I then proceeded to inspect the meat at the different markets, with the result that I find 'no cause' for complaint. Following were the markets inspected: that of Mr. W. H. Hardin, Mr. W. R. Turner, and Mr. G. S. Horne, also the fish market of Mr. E. F. Shealy. I also inquired of every merchant there if he had ever heard or known that rotten or bad meat had been sold; they all said, No. During the summer meat was only sold in the village twice a week, Thursdays and Saturdays."

The following letter indicates further the attention given to the Pure Food and Drug law, the present provisions of which, as pointed out elsewhere, are utterly inadequate:

August 12, 1911.

Mr. Jas. A. Rudolph, V. M. D., Food Inspector, City of Anderson, Anderson, S. C.

My Dear Sir: Your letter of August 9 addressed to the State Health Officer has been referred to this Department for consideration and answer. I note that you ask whether "a butcher has the right to peddle diseased meats in the mill village outside of the city when they are condemned as unfit for human food in the municipal abattoir here?" I note further your statement that the city ordinance at Anderson requires that meat condemned can be taken outside of the city or disposed of in accordance with the United States regulations, and that "instead of it being disposed of in accordance with the government's regulations, I am told, most of the butchers take it outside of the city."

I am glad that you have called attention to this matter, for the people residing in these mill villages adjacent to our towns ought to be afforded every possible protection, and the law is ample to cover the case.

I am enclosing to you a copy of the State Pure Food law. In that law the following provision is made:

"That it shall be unlawful for any person to manufacture or sell, or offer for sale, any article of food or drugs which is adulterated or misbranded within the meaning of this Act, and any person who shall violate any of the provisions of this section shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by fine not exceeding \$50 or by imprisonment not exceeding 15 days for the first offense, and \$100 or 30 days' imprisonment for each subsequent offense."

In Section 3, sub-division 6, reads as follows, giving the classification of the foods that are considered adulterated in accordance with the provisions of Section 1:

"If it consists in whole or in part of a filthy, decomposed or putrid animal or vegetable substance or any portion of an animal unfit for food, whether manufactured or not, or if it is the product of a diseased animal, or one that has died otherwise than by slaughter."

This clearly brings this kind of peddling, whether it be in or out of the municipality, under the provisions of the State law.

Going a step further, this same sub-division sixth of the State law is contained in Section 7 of the United States Pure Food and Drug Act, and the sale of this class of stuff is clearly in violation of the Federal, as well as of the State law. Going another

step further, I beg to call your attention to Section 5 of the United States Food and Drug Act of 1906, which reads as follows:

"That it shall be the duty of each district attorney to whom the Secretary of Agriculture shall report any violation of this Act, or to whom any health or food or drug officer or agent of any State, Territory, or the District of Columbia shall present satisfactory evidence of any such violation, to cause appropriate proceedings to be commenced and prosecuted in the proper courts of the United States, without delay, for the enforcement of the penalties as in such case herein provided."

The United States Food and Drug Act for a violation of this kind also declares the offense a misdemeanor and imposes a fine not exceeding \$500 or a sentence to one year's imprisonment, or both fine and imprisonment, in the discretion of the court, and for each subsequent offense a fine or not less than \$1,000, or a sentence of one year's imprisonment, or both.

You, yourself, as a municipal officer employed in this line of work in this State, could go before any Magistrate and swear out a warrant for these parties under the provisions of the State law of 1907, which are referred to above, and upon the arrest of the parties proceed to prosecute them, presenting your evidence.

Under an agreement made between this Department and the State Board of Health, December 1, 1910, which was made under a provision of Section 19 of the Commercial Feed Stuffs Act, this Department has undertaken to conduct as far as possible the enforcement of the Pure Food Law of 1907 of the State of South Carolina. Under this agreement no regulation has yet been drawn that would permit any one employed by this Department to institute prosecution in a case of this kind, but, if acting as I have indicated above, you prosecute these parties before a Magistrate, acting as you have a right to do under the provisions of the general Act, and then transmit to this Department a transcript of the evidence already obtained substantiating the charge, I will immediately place the matter in the hands of the United States District Attorney for South Carolina, and officially request the most vigorous handling of the matter in the United States courts.

These people in these suburban manufacturing villages should and must receive protection against such acts as you have indicated, calculated to irreparably injure the human resources of the commonwealth, and it shall be my pleasure, as well as it is my duty, to do everything in my power to put a summary stop to

such practices, even if the offenders must be sent to a Federal prison. All reports of such practices as may come under your notice, or the notice of any other local health officer, supported if possible by evidence accompanying the original report, will be most heartily welcomed and will receive the most careful attention.

Very truly yours,
E. J. WATSON,
 Commissioner.

CHEMIST'S REPORTS.

May 15, 1911.

This being the first publication on feeding stuffs issued by this Department, it is deemed necessary to make some explanation as to the working of the laboratory.

By an agreement between the Department and Clemson College at the outset it was decided that the laboratory would be located at Clemson College and work in co-operation with the South Carolina Experiment Station, but after only a few months' operation the Department, as well as the authorities at Clemson College, fully realized the disadvantages in having the analytical work separated from the inspection work, and the Commissioner himself decided that the best and most economical way to enforce the law governing the sale of commercial feed stuffs would be to bring the laboratory in closer touch with the rest of the work. Commissioner Watson at once had the laboratory moved from Clemson College to Columbia, where it is now being operated much more satisfactorily to all concerned. Of course, this transfer necessitated some little time to get the new laboratory equipped and ready for work, but by the middle of November the laboratory was ready for work on a small scale. By January 1, 1911, the laboratory had been completed and equipped throughout for feed work. At that time Mr. R. M. Simpson, a graduate of Clemson College, was added to the laboratory force and since then we have turned out a complete analysis on between 250 and 300 samples of feed stuffs, and at present are handling the samples as fast as they are collected by the inspectors, in order that any deficiency detected, either by microscopical or chemical analysis, can be corrected before the feed has been all consumed.

A complete analysis is made within one week or ten days after the sample is received at the laboratory, and a report is at once sent to the manufacturers, but a new ruling by the Commissioner says that a report shall be sent both to the manufacturer and the dealer from whom sample was taken rather than simply sending one to the manufacturer.

AS TO RECEIVING AND HOLDING SAMPLES.

After samples have been drawn by one of the inspectors with a trowel as provided for by the commercial feed stuffs law, they are each placed into a container with a slip giving the details as to where the sample was taken, in whose possession the goods were found, the name of the manufacturer, and the guarantee that the feed carried. The container is then sealed and expressed to the laboratory. A duplicate of this slip is mailed to the laboratory and as soon as the feed is received the seal is broken and then the two slips compared to see that they are duplicates. The sample is at once transferred to a glass jar and given a laboratory number. Then the sample is thoroughly mixed and sub-sampled, taking out about four ounces for an analytical sample and the rest put back into the jar and saved for microscopical examination, and for future reference in case any dissatisfaction arises. The analytical sample is ground in a band mill until all of it passes through a M. M. sieve. This sample is given the laboratory number and is ready for analytical work.

ANALYSIS MADE.

The following determinations are made:

Moisture, fat or ether extract, protein, fiber, ash, and carbohydrates. It is deemed necessary to give somewhat of a detailed description of the chemical properties of these classes of substances, in order to make the interpretation of the analysis of commercial feeds easy.

MOISTURE.

Water is present in varying quantities in all classes of feeds, no matter how dry they may appear to be. The amount varies with the temperature, process of manufacture and character of substance.

FAT OR ETHER EXTRACT.

The fat or ether extract is that portion of the feeding stuff which is soluble in dry ether. This is mainly fats and oils, but contains appreciable amounts of gums, wax and coloring matter which may be present.

PROTEIN.

The protein is that portion of the feeding stuff containing nitrogen. The total nitrogen is determined and this multiplied by $6\frac{1}{4}$, thus giving the protein.

FIBER.

The fiber is composed of cellulose and is the most indigestible part of a feed. It includes the woody part of a plant. A feed with a high crude fiber is considered a low grade feed as a rule.

ASH.

The ash is the inorganic or mineral matter of plants. It consists chiefly of soda potash, lime and magnesia combined to form sulphates, carbonates, phosphates and chloride.

CARBOHYDRATES.

The carbohydrates include the *nitrogen-free* extract and the crude fiber.

The term nitrogen-free extract includes the non-nitrogenous constituents of feed. The principal substances included are the sugar, starches, organic acids and pentosans. In ordinary feed analysis it is determined by difference, i. e., the sum of the percentages of protein, fats, fiber, moisture and ash subtracted from 100.

FUNCTIONS OF NUTRIENTS.

Protein, fat, nitrogen-free extract and ash are called the nutrients of a feed on account of the part they play in building up new and restoring old tissue, each of which performs a certain function in promoting the growth and maintaining the animal body as indicated below.

MOISTURE.

Water, though not a nutrient in the sense in which the term is made use of in the following tables, is essential to the maintenance of the animal body. But the amount in a feeding stuff has but slight effect on the value of the feed, as it can be supplied abundantly from cheaper sources, though an excessive amount of the water affects the keeping quality, as well as the money value per pound, of a feed.

FAT.

The fat and nitrogen-free extract perform the same function, being the heat and energy producers. They are consumed in the body and give out heat and energy. Fats have $2\frac{1}{2}$ times the value of nitrogen-free extract.

PROTEIN.

Protein, the nitrogenous substance of feeds, is by far the most valuable constituent, because it is the only one that can supply the nitrogenous nutrients that are essential in building up the tissues of the body. Protein can also, in the absence of sufficient fat and carbohydrates, take their place and be used for the production of heat and energy.

FIBER.

The fiber has the least value of all the constituents of a feeding stuff. Seemingly, its only value would be a roughness. A small per cent. of crude fiber is digestible, but a large portion of this value is taken up, as it takes so much energy to digest it.

ASH.

The ash furnishes the material for producing the bony structure and to some extent the various tissues and secretions of the body. As it is usually found in abundance, little attention, aside from its manurial value, is usually given it.

CARBOHYDRATES.

The carbohydrates, of which nitrogen-free extract is the chief constituent, and the fats perform the same functions in the body, those are the productions of heat to keep the body warm and energy to give movement.

DIGESTIBILITY.

A term used to designate that portion or per cent. of the nutrient in a feed which is digested by an animal. For example, if a feed contains 15 per cent. of protein and it has a digestibility of 80, then 80 multiplied by 15 per cent. equals 12 pounds of digestible protein in every 100 pounds of feed.

PERCENTAGE AMOUNTS.

Percentage amounts is the amount in 100. If a feed contains 4 per cent. fat and 15 per cent. protein, every 100 pounds of that feed contains 4 pounds fat and 15 pounds protein.

AS TO THE MISCELLANEOUS SAMPLES SENT TO THE LABORATORY FOR ANALYSIS.

On account of the amount of work on official samples taken by the inspectors, we find it impossible to make analysis of miscellaneous samples sent in and only occasionally is this done, and then it is by request from the Commissioner. Analysis of a feed should first be obtained from some commercial chemist, and then the feed tagged and guaranteed accordingly. As soon as one of our inspectors finds this feed offered for sale, a sample is taken and sent in for analysis to see if it comes up to guarantee. A report of this is sent to both the manufacturer and the dealer.

CONDITION OF FEEDS OFFERED FOR SALE NOW COMPARED WITH THOSE FOUND ON THE MARKET MAY 15TH, 1910.

There were a number of rice feeds on the market, which were not only very inferior feeds, but which fell far short of what was guaranteed on the sack. There were also a number of these feeds highly adulterated and carried a very low feeding value.

Then we found quite a little cotton seed meal below the standard and also below the guarantee.

Also a number of times we found dark cotton seed meal, which was made from heated seed, and which should not be used as a feed meal offered for feeding purposes.

Then a number of the mixed feeds offered for sale at that time were compounded from inferior grains and inferior portions of the grains.

With the co-operation of the honest manufacturers and dealers, who realized the protection of such a commercial feed stuff law

as South Carolina has, if properly enforced, these conditions have greatly changed. The feeds that are placed on the market at present are far superior to those collected in 1910, and with the continuation of such co-operation South Carolina will soon recognize the sale of nothing but the best feeds, and some other State will have to act as the dumping ground for inferior feeds.

Very respectfully yours,

A. C. SUMMERS,
State Feed Stuffs Chemist.

January 1, 1911.

Hon. E. J. Watson, Commissioner of Agriculture, Commerce and Industries, Columbia, S. C.

Dear Sir: I hereby submit annual report from the State Laboratory for the year 1911.

As stated above, the laboratory was installed in Columbia and ready for work January 1, 1911. The majority of the samples analyzed up to that time fell below the manufacturer's guarantee. Somewhat disheartened by the criticism from the manufacturers and the lack of co-operation from the honest manufacturers and dealers, we began the work January 1, 1911, with new vim and vigor to work harder than ever to place a better grade of feed on the market in South Carolina and prove to the people of the State as well as the manufacturers the advantage of such a law. At last we began to realize a gradual improvement in feed offered for sale and finally began to receive co-operation from the manufacturers.

Time after time the Department was severely criticized for reporting some feed below the manufacturer's guarantee and condemning same. Each time the law was enforced to the letter and the manufacturer forced to improve his feed and bring it up to guarantee or withdraw same from this State. Gradually we gained co-operation and began to realize an improvement in feed placed on the market during 1911, and at the beginning of 1912 I am free to say that no State has ever or will ever realize a greater reformation in the improvement of feed stuff in so short a time as we have.

INFERIOR PRODUCTS.

At the beginning of the work in 1910, we found the feed stuffs offered for sale in South Carolina adulterated with every conceivable thing, and the grade of feed as a whole the lowest that could be had. The majority of the feed placed on the market at \$15 to \$30 per ton was worth in practical feeding value from \$9 to \$18 a ton. They were being placed on the market without any restriction as to the quality. Of course, South Carolina being one of the few States not protected by a feed stuffs law, was used as a dumping ground for rotten and low-grade feed that could not be disposed of in other States. Consequently she was at all times flooded with rotten and adulterated feeds. The reformation in grade of feeds sold in South Carolina has been far superior to any expectations and today the feed offered for sale in this State will measure up to the standard of any State. Now it is the full expectation of this Department to see South Carolina not only measure up to the standard of any other State, but rather than to see any inferior feed come in this State, see even the small amount manufactured by home concerns shipped out of her borders.

CORN.

Soon after the work of feed stuffs had begun there arose another problem. South Carolina was not only a dumping ground for inferior feed, but was being flooded with rotten corn from the middle and northwestern States. The Department realizing this, it at once began a rigid inspection of all corn shipped in the State, using the National Grain Dealers' grades to grade by and the Alsberg acidity test to test the deterioration. From 60 to 75 per cent. of the corn then placed on the market was unfit for feed in any shape, and was, therefore, condemned and seized by the Department. At first many criticisms went out against the Department; many came to the laboratory warehouse to make an investigation of the corn seized, but after seeing it, spoke in commendable terms about the work of the Department and left heartily in sympathy with the work. Car after car was seized and sent to the laboratory warehouse and several carloads are held at the warehouse now pending instructions from the Commissioner, and are open for public inspection.

Only a few months passed before the grain dealers began to realize that to ship spoiled corn into South Carolina meant to have it seized and confiscated. Today only from 5 to 15 per cent. of the

corn being inspected is condemned, when 75 to 80 per cent. was condemned one year ago.

MEAL.

After stopping the sale of damaged corn in South Carolina there arose a question then as to what was being done with the corn that could not be disposed of in the whole grain. With this in mind, the Commissioner began an inspection of all corn products sold in this State. Only a few samples of corn meal had been submitted to the laboratory for analysis before any one could easily see where a large majority of the spoiled corn was going. It was simply being ground into meal and sent into the State for human consumption instead of animal feed. Again a fight arose between the Department and the manufacturers, but in a short time this was over and marked difference could be seen in the grade of meal shipped into this State. When the inspection first began, about 95 to 99 per cent. of meal shipped into South Carolina was found to be made from spoiled corn and was condemned. The grade of meal at once began to improve and at present only from 1 to 5 per cent. of the meal shipped into this State is condemned.

RESULTS OF EXAMINATIONS.

To January 1, 1912, this laboratory has analyzed 751 samples of feed stuffs taken at different times from all parts of the State. Of the 751 samples, 444 was up to the manufacturer's guarantee and 307 below the guarantee in one or more ingredients. Of this 307 there was 154 below in protein, 96 below in fat, 114 high in fiber, 26 below in both protein and fat, 28 below in protein and high in fiber, 9 below in fat and high in fiber, and 23 below in protein and fat and high in fiber.

We also analyzed 225 samples of corn meal, 54 samples of grits and 33 samples of corn. Of the 225 samples of corn meal there was 144 good and 81 condemned. Out of the first 50, 38 was condemned, out of the second 50, 19 was condemned, out of the third 50, 13 was condemned, out of the fourth, 11 was condemned, out of the last 25 one was condemned. Out of the 225 samples every sample of home-raised ground meal was good. Of the 54 samples of grits every sample was good.

Respectfully submitted,

A. C. SUMMERS,
State Feed Chemist.

CHIEF INSPECTOR'S REPORT.

Hon E. J. Watson, Commissioner of Agriculture, Commerce and Industries, Columbia, S. C.

Dear Sir: The first feed law in South Carolina went into effect in May, 1910. The work of inspection was begun in June with a force of four inspectors in the field. At that time it was found that the markets of the State were flooded with a low-grade and adulterated feeds. Such worthless adulterants as rice chaff, ground corn cobs, peanut hulls, oat hulls, etc., with practically no feeding values, were used extensively in the composition of feeds. In the beginning a large percentage of samples drawn on the open market by the inspectors, and analyzed by the chemists in the State Commercial Feed Stuffs Laboratory, were found to fall below the guaranteed analysis. Feed stuff dealers as well as consumers were buying feeds according to price, and did not take into consideration the actual feeding value.

In the beginning of this year, the State, as in the past, was being flooded with large quantities of damaged grains, which has been playing such havoc with stock. Car after car of damaged corn which had not matured in the West on account of late planting and early frost, was shipped into this State. This corn was husked and cribbed on the Western farm, and the grower waited until a hard freeze before putting it on the market. In this shape it passed inspection at the selling point, but as soon as it was sent South and it had thawed out, it began to spoil and invariably reached South Carolina in a condition unfit for feeding purposes, even though it may have been kiln dried. This kept the inspectors busy, locating and withholding such corn from sale. Some of it was allowed to be shipped out of the State upon a written affidavit from the shippers that it would not be shipped back into this State in any shape or form. Other lots were found so bad that the Department, after careful test in the laboratory had shown the corn to be totally unfit for feed in any manner, was compelled to seize and take off the market.

Just at the close of the early spring, you determined to go a step further than had ever been taken in this section of the country, that is, to have our inspectors draw on the open market samples of corn products, such as meal, hominy, grits, etc., and have them analyzed to determine the "acidity" which, according to Dr. Alsberg, an expert chemical biologist of the United States Bureau of Plant Industry, has been the cause of corn develop-

ing poisonous qualities, revealed when the acidity runs up above a certain standard, making the grain totally unfit for the consumption of man or beast. These samples, and particularly those of corn meal, drawn by the inspectors over the entire State for the first three weeks proved to have been to a large extent ground out of spoiled corn. Of course millers without an exception stated that their products were made from the very best milling corn, but it was remarkable to see the difference in the meal, by chemical test, just as soon as it was found that this Department had determined to take all spoiled meal off the markets of the State.

Owing to there being so many towns and stores away from the railroad, it consequently being nearly impossible for our inspectors to reach them without much lost time and great expense, and owing to the fact that it had been found that these little stores were those upon which the dishonest dealers were attempting to unload their low grade feeds, it was determined that these towns and stores had to be visited if this Department was to enforce the feed stuffs law, and particularly where it was needed the most. With this object in view the Department automobile was purchased by you, to be used by one of our inspectors. With this automobile it is possible for our inspectors to visit these country stores more often, covering several times the territory usually visited, and at a saving of time and expense. .

When the inspectors first began to go out into the field, they found only very few of the more progressive dealers, farmers, and consumers, who had any idea of what feeds, or rather anything as to the composition of the feeds that they were buying. The unreliable manufacturers were able to place on the market feeds with low feeding value and obtain a good price for their products. Now both the merchant and consumer, beginning to realize the good of the law, are buying their feeds upon the guaranteed analysis, and compare closely the percentages of protein, fat, fiber and carbohydrates, buying, of course, that feed which gives the greatest amount of protein and fat, and the smallest amount of fiber for a given amount of money. The Department has made it a rule this year to send a copy of the analysis of each sample drawn to both the manufacturer and the dealer or consumer. The inspectors report that the majority of the feed dealers and consumers, to protect themselves, are insisting on the feeds being shipped them in strict compliance with the law, and

when once a feed has fallen below the guarantee, according to the chemical analysis, the salesmen find it difficult to get further orders with the same merchant. Merchants who at first were inclined to make light of the inspection, now receive the inspectors and lend all possible aid. On every hand dealers and consumers are being kind enough to say that this branch of our work has done as much for the State as any law in the past, and remark on the big difference on both in quality of the feeds as well as the benefits to the stock.

In order to make the Commercial Feed Stuffs Act as effective as possible, the Department decided not to leave a stone unturned until conditions could be brought up to a normal standard. With this in view the inspectors have been kept busy in the field, covering the State as fast as practicable, working those towns and stores where we found it was most needed more often than others. During the year inspections were made of over 6,578 stores and warehouses, 751 samples were drawn, and 254 orders were issued withholding from sale feeds not coming up to the requirements.

Last year the Department prepared and exhibited at the State Fair a collection of concentrated feed stuffs which was viewed with great interest by hundreds of visitors. Owing to this interest, and upon the request of several visitors who later came to our laboratory and witnessed the work being carried on, the Department again collected an instructive and educational exhibit of concentrated feeds, together with samples of grains such as barley, corn, wheat, rye, rice, corn meal, grits and the various products and by-products of the above cereals, showing the different stages of these products as they passed from machine to machine at the mill. The chemical analysis showing the feeding value of each sample was clearly shown on each exhibit as well as the ingredients. Samples of grains were shown by grades, alongside damaged specimens which had been found and withdrawn from the markets of the State by our inspectors.

The Chemist and his assistants were with the exhibit to explain to any interested visitor the methods and meaning of the analysis and feeds.

This exhibit, I believe, attracted the attention of as many visitors as any other exhibit on the grounds, and judging by the questions asked and interest taken by them, many went home wiser and better able to cope with the many frauds which had been practiced on them in the past.

Again, at the South Atlantic Corn Exposition, the Department set up and exhibited these samples of feeds and grains, and in addition had a working laboratory, making chemical analysis of feeds as well as showing the proper steps to take to determine the "acidity" of corn, and by-products, which is the most reliable method of showing the exact composition and state of corn products, such as meal and grits.

Above all, these exhibits demonstrated the absolute necessity of the State maintaining a Department whose duty it is to protect the innocent consumer against such frauds, which can not be detected except by careful chemical analysis.

In conclusion, it is well to add that the inspectors on the last two tours of the State have found feed conditions much improved, and practically all lots of feeds coming up to the requirements of the laws. Samples have been drawn and analyzed several times of all different feeds on the market, and all oil mills visited personally.

It is hoped that the manner in which this work has been conducted has met with your approval. Thanks are due you and the entire office force for the uniform courtesy and co-operation which has at all times been extended. To the chemist and inspectors I wish to acknowledge the appreciation of the service they have given to aid the work, and say that in my opinion I do not think you could have selected a more hard working and capable set of assistants.

Very truly yours,

S. M. SLOAN,
Chief Feed Stuff Division.

CONCLUSION.

In the presentation of the two reports of this Department, I have endeavored to present a fair outline of the activities of the Department in the various lines of constructive endeavor, with which it has been charged from time to time, and at the same time to embrace in the reports such statistical and other data as to the agricultural, industrial and commercial development of the State, as is in constant demand by the people, not alone of the State, but from beyond the borders of the State. The endeavor has been made to present every essential fact as attractively as possible, and as conveniently as possible for reference of all classes of people in the prosecution of their daily business. As has been shown by the gradual broadening of the scope of this Department's endeavors, due to the enactment of new and material laws, the work of the Department has been greatly enlarged. Now the Commissioner and the Department itself is charged with manifold duties relating to the welfare of all forms of profit-earning activity, and with the care and advancement of the welfare of our human and animal resources as well as of our many and varied natural resources. The variety of work, and the amount of responsibility necessary to be borne makes the duties of the Commissioner extremely exacting and has forced him to devote himself unrestrainedly to the mastery of many lines of activity, scientific and otherwise, which has required hard, earnest, and painstaking study in order to obtain the necessary equipment for the discharge of his duties in the most effective manner.

Many delicate situations have had to be faced and handled incident to the organization of each new phase of the work, and the beginning of enforcement of laws in the exercise of the police power in the State, imposing restrictions upon persons who had not been before accustomed to restrictions in those regards.

Conservatism has characterized efforts in this direction, though firmness and ever increasing activity for thorough enforcement of law have been the policy of this Department. This policy has

been pursued by all the competent employes in the various divisions of the Department, and they have worked upon the principle of strict attention to official duty upon constructive lines to the exclusion of every other consideration.

In concluding this report, I wish to say that I have worked with all of the ability and energy I possess, by day and by night, to accomplish those things that would make for the material advancement and uplift of the people of our beloved State. I have labored incessantly to pursue an absolutely nonpolitical policy, and carry forward this great constructive work upon purely constructive lines. I have stopped not to quarrel with any man or set of men. My conscience is clear that I have entirely devoted, from a patriotic standpoint, the best years of my life to the welfare of the people. I have sacrificed rare business opportunities and applied my own scant means to the cause. I am not ashamed of the results that have been accomplished, nor am I ashamed of any public act or policy pursued in the direction of the efforts to obtain results.

I wish to take this occasion to express my appreciation to all of those forces who have labored so earnestly in co-operation with me and to express my gratification to the General Assembly that in its wisdom has seen fit to place permanently upon the statute books of the State many constructive laws, the suggestion and advocacy of which came from this Department, starting so humbly less than eight years ago with one clerk and a total expense account of \$2,000 and no office equipment, and not one page of printed matter of value about the resources of the State of South Carolina.

Respectfully submitted,

E. J. WATSON,
Commissioner.

APPENDIX I.

CLASSIFIED SUMMARY OF DISBURSEMENTS OF FUND DERIVED FROM COMMERCIAL FEED STUFF TAX.

Amount on hand Jan. 1, 1911..		\$4,727 89
Amount collected for twelve months ending Dec. 31, 1911..	18,150 80
Apparatus, fixtures and equipment of State Feed Stuff Laboratory	\$907 63	
Supplies for Laboratory	210 94	
Salary of Chemist and two Assistant Chemists	2,776 25	
Salary of Inspectors	6,274 37	
Salary of Stenographer	450 00	
Traveling expenses of Inspectors, Chemist, Commissioner and Special Agents	2,198 15	
Mileage for Inspectors, Chemist and Commissioner	760 00	
Printing tax stamps and bulletins, stationery and office supplies	872 60	
State Feed Exhibits at State Fair and South Atlantic Corn Exposition..	256 67	
Rent of Laboratory quarters and storage	323 83	
Freight and express charges	22 95	
Operating expenses of Laboratory	246 52	
Refund for tax stamps returned	43 47	
Telephone service	110 80	
Gas and electricity for Laboratory	283 84

APPENDIX II.

DETAILED STATEMENT OF DISBURSEMENTS, SHOWING WARRANTS ISSUED ON CONTINGENT FUND.

1911.	
Mch. 1	Appropriation for general expenses, Contingent Fund, Dept. A. C. & I.
	\$4,000 00
DISBURSEMENTS.	
Feb. 25	Warrant 1—To W. L. Blanchard, photos for illustrating, bill attached
	\$4 50
25	Warrant 2—To Jones' Transfer Co., livery for Commissioner Watson to agricultural sections, bill attached
	2 75
25	Warrant 3—To Manufacturers' Record, subscription Feb. 16, 1911, to Feb. 16, 1912, bill attached
	4 00
25	Warrant 4—To Henry Romeike, subscription to Clipping Bureau, bill attached
	1 40
25	Warrant 5—To Walker, Evans & Cogswell, balance for printing one thousand water power bulletins, bill attached
	25 98
25	Warrant 6—To Southern Good Roads, subscription to Jan., 1912, bill attached
	1 00
25	Warrant 7—To R. B. Calvo, one geological map of S. C., issue 1898
	1 50
25	Warrant 8—To Roland Williams, janitor, services for January and February
	36 00
25	Warrant 9—To McCreery & Premley Co., rental of 5 offices in Palmetto Bank building for Department during January and February, bill attached
	125 00
Mch. 1	Warrant 10—To The State Co., printing Department's annual reports and bulletins, \$659.06; office supplies, \$22.97, bill attached
	682 02
8	Warrant 11—To M. J. Miller, clerk, in payment of the following bills attached to warrant:
	Freight \$3.95
	Office supplies 1.00
	Towel Supply Co. 2.00
	Telegraph tolls 12.65
	Commissioner Watson expenses trip to Charleston 4.60
	Expenses moving office to Palmetto and return move to State House 32.00

LETTER OF TRANSMITTAL.

Charleston, S. C., Dec. 26th, 1911.

His Excellency, Coleman L. Blease, Governor, Columbia, S. C.

Sir: I have the honor to submit the 32nd Annual Report of the Executive Committee of the State Board of Health, with the request that you transmit it to the General Assembly.

The work accomplished by the Board during the past year is fully set forth in the report, but I wish to call your attention to one or two matters of especial importance, which should receive the earnest consideration of the General Assembly.

The wisdom of distributing diphtheria antitoxin free of charge to all who need it, has been amply justified. If we can judge from the number of calls for antitoxin, diphtheria has been rather prevalent throughout the State, and there can be no doubt that the money expended for this purpose has been repaid many times over in lives saved and in sickness prevented. I sincerely trust that the General Assembly will make sufficient appropriation to meet the increasing demand for this agent.

The free distribution of typhoid bacterin for the prevention of typhoid fever is another very important life-saving measure instituted by the Board during the past summer. Typhoid fever continues to be exceedingly prevalent in South Carolina on account of the imperfect sanitary conditions which exist generally, and which in many cases are difficult to correct. The use of bacterin will, therefore, be of the greatest service in checking the ravages of this disease, and the Board should receive all encouragement in carrying on this beneficent work.

Every year attention is called to the enormous importance of the tuberculosis problem and to the inability of the Board to handle it for want of means. Tuberculosis is a preventable disease, which costs thousands of dollars and valuable lives every year, and yet no appropriation is made to stay its progress. Other States appropriate annually large sums for this purpose, realizing that money so expended is well invested, but South Carolina still lags behind. We trust that another year will not be allowed to pass without an effort on the part of our State to do her share in this great work.

Another problem which is assuming alarming proportions is the spread of pellagra. The cause of this disease and the mode of its dissemination have so far eluded discovery. Certain other Southern States are endeavoring to solve the mystery. Should we not do likewise? A thorough and systematic study of this disease as it prevails in South Carolina is urgently needed and we recommend a special appropriation to be expended by the State Board of Health, or by a separate pellagra commission appointed to carry on the investigation.

In compliance with a joint resolution passed at the last session of the General Assembly, the sanitary condition of the State Penitentiary has been thoroughly investigated, two inspections having been made by the entire Board. The second inspection was made on December 1st, and although considerable improvement was noticed and certain of the recommendations previously made had been carried out as far as possible, the Board feels constrained to reiterate the opinion originally expressed, especially as to the woman's building and the hosiery mill.

The increasing usefulness of the laboratory is most pleasing to the Board and it is with especial gratification that your attention is called to the report of the Director.

Respectfully,

ROBERT WILSON, JR.,
Chairman Executive Committee State Board of Health.

GENERAL REPORT.

This is the 32nd Annual Report of the Executive Committee of the State Board of Health, and is for the year ending December 31st, 1911.

This report is made in compliance with the following concurrent resolution, which directs that the "reports of the Departments of the State Government, and every officer required by law to be made to the General Assembly or to any officer, the printing of which is to be charged to the State, shall contain only a concise statement of the transactions of the officer or department without repetition, and a concise statement of recommendations and no proposed measure of copy of law, or copy of any other report or document, except such as the production of which shall be necessary, shall be printed at the expense of the State, etc."

PERSONNEL OF THE BOARD.

The Board has lost one of its members this year by resignation on account of ill health, Dr. H. T. Hall of Aiken, S. C. This vacancy has been filled by the election of Dr. D. B. Frontis of Ridge Spring, S. C.

The Board regrets very much the loss of its efficient Health Officer, Dr. C. F. Williams, who has been with them for four years, but was compelled to resign owing to the inadequate salary paid to the State Health Officer.

Upon the resignation of Dr. C. F. Williams, Dr. Jas. A. Hayne of Greenville, S. C., was elected.

EXECUTIVE COMMITTEE STATE BOARD OF HEALTH.

Robert Wilson, Jr., M. D., Chairman	Charleston
D. B. Frontis, M. D.	Ridge Spring
C. C. Gambrell, M. D.	Abbeville
E. A. Hines, M. D.	Seneca
W. J. Burdell, M. D.	Lugoff
Wm. Egleston, M. D.	Hartsville
W. M. Lester, M. D.	Columbia
J. Fraser Lyon, Attorney-General	Columbia

A. W. Jones, Comptroller-General. Columbia
 W. W. Dodson, M. D., Pharmaceutical Member. Greenville
 Jas. A. Hayne, M. D., Secretary and State Health
 Officer. Columbia
 F. A. Coward, M. D., Director, Laboratory State Board of
 Health. Columbia
 F. L. Parker, Jr., M. D., Chemist and Bacteriologist. Charleston
 J. LaBruce Ward, M. D., Director Rural Sanitation. Columbia
 Milton Weinberg, M. D., Assistant in Rural Sanitation.
 J. T. Howell, M. D., Assistant in Rural Sanitation.
 F. M. Routh, M. D., Assistant in Rural Sanitation.
 F. D. Rodgers, M. D., Assistant in Rural Sanitation.
 A. M. Brailsford, M. D. (resigned), Assistant in Rural Sani-
 tation.
 Jas. R. Cain, Assistant in the Laboratory.
 A. S. Williams, Assistant in the Laboratory.

Mr. Cain and Mr. Williams were appointed assistants in the laboratory under the provision of the Rockefeller gift. In addition to Mr. Cain's duties under the Rockefeller Commission, he assists Dr. Coward in the laboratory work, and for these duties receives a salary of \$60.00 a month from the contingent fund.

In addition to the above staff there is a stenographer and a janitor paid by the Board of Health.

MEETINGS.

The Board has held in addition to its regular quarterly meetings a called meeting in March for the purpose of complying with a Concurrent Resolution passed by the General Assembly to make an investigation of the sanitary conditions of the State Penitentiary; also a special meeting in May for the election of the State Health Officer. They met again in June for the purpose of meeting with the Directors of the State Penitentiary about the conditions in the hosiery mill.

The transactions of the Board at these meetings are given in detail in the minutes covering these three called meetings.

EPIDEMIC DISEASES.

SMALLPOX.

Smallpox has been present in the entire State throughout the year. The type has been mild and no deaths have been reported

to this Board. As in previous years, the rural districts have suffered more than the towns, giving a striking illustration of the benefits of compulsory vaccination, which is enforced in towns and not in rural districts.

There was quite an epidemic of smallpox at Jalapa, S. C., Newberry County, there being probably about 100 cases. Owing to the efficient work of Drs. Mower and Pope, all the negroes were vaccinated and a great many of the whites, and the epidemic checked. There were no cases in Newberry, which was but a short distance from Jalapa, but the town of Newberry has been particular to enforce vaccination among its citizens, hence their immunity.

The State Health Officer visited the following places in regard to smallpox: Jalapa, Camden, Batesburg, Lexington, Cowards, Ridgeway, Blaney, Bamberg, Chapin, Leesville, Cope, North, Norway, Gilbert, Estill, Lugoff, Hardeeville, and by lectures and distribution of bulletins on smallpox, by personal vaccination of all people possible, helped to hold the epidemic in check. As can be seen, it was State wide, and would probably have developed as an epidemic had not proper precautions been taken and enforced. This office has sent out 89,815 vaccine points and tubes. Approximately this number of people have been vaccinated. There is still lack of organization among the physicians, and in some parts of the State, lack of co-operation. We have not deemed it wise to enforce rigid quarantine of smallpox cases, but have depended upon thorough vaccination and re-vaccination of the community to hold the epidemic in check.

SCARLET FEVER.

There have been but few cases of scarlet fever reported to this office, and we judge that the disease has run an unusual mild course with no serious outbreaks at any points in the State. In the absence of mortuary statistics and the lack of reports from physicians, this office cannot give any accurate information in regard to the prevalence of this disease.

DIPHTHERIA.

Though but few cases of diphtheria have been reported to this office, the following amount of antitoxin has been administered for diphtheria in the State, and we judge that diphtheria has

been extremely prevalent in every county in the State, and we feel sure that the number of lives saved by the prompt administration of antitoxin has well repaid the State for the funds expended. We know that the death rate must have been exceedingly small from the diphtheria present; although no deaths have been reported to this office. Judging from the number of cases to whom antitoxin has been administered, had the former death rate before the discovery of antitoxin been obtained, there would have been such an outbreak from the citizens of the State that would have caused even the most slothful physician to have reported such an epidemic to the State Board of Health. We believe that the State is being well repaid for the money expended for antitoxin, but most urgently beg the Legislature to appropriate a sum sufficient to pay for the increasing demand, for this agent which saves our little ones from the dread clutch, the enemy of little people, which was once known as the strangler, namely, diphtheria, and claimed thousands of little victims as its yearly tribute from this State.

The Board at its meeting made a contract with H. M. Alexander & Co., of Marietta, Pa., to furnish diphtheria antitoxin for the year 1912. The contract can be found in December minutes.

Others bidding were Schiefflin & Co., H. K. Mulford & Co., and the National Vaccine and Antitoxin Institute.

TYPHOID FEVER.

We regret to say that typhoid fever has been very prevalent in South Carolina this year. In the epidemics investigated it has been found that the disease is due to soil pollution from insanitary privies, lack of proper sewerage system, surface wells, unscreened houses, filthy barns where filthy cows are milked by the unwashed hands of laborers. Typhoid fever is a disgrace to a civilized community, and only by strenuous educational campaigns, by percept and by example, can we force the citizens to save their own lives.

An investigation was made of the conditions at Inman, S. C. Surface well, unscreened privy and numerous flies explained the spread of the disease in this beautiful little mountain town situated at the foot of the Blue Ridge mountains where health conditions should be ideal. Bishopville, S. C., showed about twenty cases out of a population of perhaps two thousand. The same

conditions prevailed in this low country town that prevailed in the up-country. We lectured on these subjects and had personal conversations with all of whom we could come in contact, explaining the necessity of sanitary disposal of garbage and other deleterious material. We explained how the flies conveyed the disease in many cities of South Carolina that did not have sewerage. We were promised an ordinance enforcing the use of the sanitary privy. We believe that our campaign for the past six months will bear good fruit next year. We have visited the following places giving lectures on typhoid fever: Blackstock, Timmons-ville, Hardeeville, Hartsville, Bishopville, Inman, Spartanburg, Lancaster, Ridge Spring. In addition to our work, the physicians under the Rockefeller Commission are constantly lecturing and teaching the people of the State the cause of the disease and how to prevent it.

In July of this year we commenced to manufacture anti-typhoid bacterin. This bacterin will immunize an individual against typhoid fever for a period of at least two years, and where an epidemic breaks out in a town, this is an invaluable aid towards limiting its ravages, for by inoculating the citizens of a small community we can thus stamp out the disease by this focus, and have time to compel such sanitary measures which would perhaps prevent a second outbreak of the disease. Dr. Coward has labored faithfully to supply the demand from all portions of the State with this bacterin. We have sent out so far He will have to send out a great many more next year, as the demand will be much greater, as people will learn of the slight discomfort of its use, and the wonderful benefits derived from immunity to this veritable scourge of the rural districts. South Carolina is the first State in the Union to give her citizens the benefits of this wonderful discovery, which had so forcible a demonstration of its efficiency in the recent concentration of troops in Texas where, although there were thirty thousand troops, only five cases of typhoid fever developed and no deaths, this being a great contrast to the terrible state of affairs which existed at Chickamauga and other concentration camps. We estimate that \$1,000 will immunize 17,000 individuals against typhoid fever, and we hope that the General Assembly will be liberal in its appropriation so that the Board may continue to carry on this work.

POLIOMYELITIS, OR INFANTILE PARALYSIS.

Again we regret to report that only two cases have been reported to this office during the present incumbent's term. These were in York County and we do not know whether the patients died or not. We presume, however, that the anticipated epidemic, anticipated on account of existing conditions in other States and the number of cases in our State last year, has failed to materialize, but cannot be accurate as to this disease or any other disease, unless some means are found to compel physicians to report all contagious diseases to the State Board of Health.

At a symposium held at Hattiesburg, Miss., on this disease, it was learned that the disease was very widespread in the United States, that if the diagnosis was made early enough the disease could be in a measure lessened in its terrible effects, but after the paralysis has set in, little, if anything, could be done. This disease is communicable and reportable to Boards of Health. A great precaution should be taken, though it rarely kills, yet it always maims its victims.

TUBERCULOSIS.

We have distributed numerous pamphlets dealing with this subject, and also lectured on same, but have not made any aggressive campaign. There have probably been, judging from the statistics of other States that have adequate means of obtaining statistics, that at least 1,500 people have died of tuberculosis during the past year. South Carolina has the unenviable distinction among her sister States of making no appropriation for the prevention of this king of all diseases that claims its millions yearly from the human race. The campaign against tuberculosis in other States and other countries is bearing fruit, and the number of people dying yearly is growing less. The wave of industrial prosperity which is traveling southward will bring to this State many new citizens, and our health problem will become more difficult. Let us not be behind other States, but make an effort and appropriate sufficient money to organize an active campaign against tuberculosis. The conditions in some of our public institutions are bad in the extreme. Our court rooms are badly ventilated and the mass of coughing, spitting, perspiring humanity is packed in them wherever courts are held, and many victims come from this source.

The passenger coaches in this State are often without spittoons. The regulations against spitting on the floor are not enforced; they are overcrowded, packed to suffocation. They are a menace to the health of all who are unfortunate to have to travel on day coaches. The General Assembly is urged to call upon the Railroad Commission to remedy these conditions, to require a spittoon in every seat—that the cars be thoroughly cleaned when they reach their destination and kept clean en route, and that the porters be not allowed to brush passengers in the aisle and sweep the cars with dry brooms and brush the seats while passengers are aboard, as they thereby scatter the germs of tuberculosis and cause them to be inhaled. They should be required to use a damp cloth or mop for cleansing cars en route.

PELLAGRA.

This disease is one of the greatest menaces that confronts industrial prosperity in South Carolina, for we find that it is by far more prevalent in the manufacturing center in South Carolina than it is in other portions of the State. A disease whose presence in this State was doubted in 1907 has become so prevalent that it forms a topic of conversation in the churches, on the streets, in the clubs and in the homes. A disease that has claimed its victims from the very poor and from the wealthy, that has attacked our women and has sent many of them to their graves and to the asylum, that is responsible for 37 per cent. of the admissions for 1911 to the State Insane Asylum—a disease whose cause is unknown, whose treatment is problematic and whose prognosis is death or chronic invalidism. A careful investigation made on August 19th, 1911, showed that 300 physicians out of the 1,200 in the State were treating 2,100 cases. It is probable that the 900 physicians not heard from were treating at least 3,000 cases, making a total of at least 5,000 cases in South Carolina at the present time. Tennessee, which had only 316 cases, deemed this disease to be such a menace to the welfare of her citizens that she sent a commission consisting of three physicians to several foci of the disease in the State. Surely the Legislature of South Carolina ought to make sufficient appropriation to enable the State Board of Health to further investigate the unknown cause of this disease, and by a study of its epidemiology

arrive at some conclusion by which the citizens of South Carolina may be protected against this disease.

The State Health Officer, through the agency of Hon. A. F. Lever and — Johnson, were enabled to secure the services of Dr. Grimm of the Public Health and Marine-Hospital Service for a short time, but owing to the lack of funds of that department, his work in this State could not be continued. Mr. Lever secured from the Agricultural Department an entomologist, Mr. W. V. King, who has been at work in this State studying the insect life surrounding the locality where this disease has been most prevalent. An informal clinic was held at the State Insane Asylum and about 150 physicians were present, including Dr. Lavinder and Dr. Grimm of the U. S. Public Health and Marine-Hospital Service; Dr. Garrison of the U. S. Navy, sent by the Navy Department of Washington; Dr. Mobley of the Health Department of Georgia, and Dr. Richardson of the Board of Health of Iowa. Many valuable papers were read. His Excellency, the Governor, gave the address of welcome, and promised to do all he could at the meeting of the Legislature to help us in our fight against this disease. We called upon the Legislature to help us. We need to obtain definite facts in regard to this disease. We must find out its cause before we can take steps to prevent its spread. We must have trained men to investigate, and trained men are not to be obtained without adequate compensation.

Dr. J. W. Babcock, Superintendent of the State Hospital for the Insane, has been untiring in his effort to assist us in the study of this disease, and it is to him that the success of the clinic held during Fair Week was due. We also thank the Public Health and Marine-Hospital Service for the efficient aid rendered us through Drs. Lavinder and Grimm.

HOOKWORM DISEASE.

Active work is being prosecuted under the Rockefeller Sanitary Commission, and the able corps of physicians under Dr. J. La-Bruce Ward are doing a great work in the eradication of this disease. Dr. Ward, with unflagging zeal, has reached the most isolated communities in South Carolina, giving them illustrated lectures and showing them the value of the prevention of soil pollution. His report shows a great work that he and his assist-

ants have done. It is unnecessary to state that while the State Board of Health is wonderfully assisted by Dr. Ward and his assistants, yet it costs the State not one cent for this assistance. There has been some newspaper correspondence in regard to the method of pursuing a campaign against hookworm in South Carolina, but surely the man who furnishes the money has a right to dictate his method of spending it, and any criticism of this method is surely without warrant.

Dr. J. LaBruce Ward, Director of Rural Sanitation, presents the following report:

To the Members of the State Board of Health.

Gentlemen: As Director of Rural Sanitation, I have the honor to submit my report for the year 1911.

Following are the names of the assistants engaged in field work during the year:

	Appointed.	Resigned.
Dr. F. A. Bell.. . . .	July 8, 1910	Feb. 28, 1911
Dr. Milton Weinberg.. . . .	Sept. 12, 1910
Dr. A. M. Brailsford.. . . .	July 15, 1911	Oct. 1, 1911
Dr. F. M. Routh.. . . .	June 20, 1911
Dr. J. T. Howell.. . . .	July 1, 1911
Dr. F. D. Rodgers.. . . .	Oct. 1, 1911

Mr. Arthur S. Williams and Mr. J. R. Cain are employed by the Rockefeller Sanitary Commission to assist Dr. Coward in the laboratory.

NOTES ON WORK.

Dr. Bell worked in Horry and Kershaw Counties, giving public lectures, inspecting school children and lecturing in the schools. Dr. Baynard did similar work in Dorchester and Charleston Counties. The latter county is the only one where any objection was raised to the medical inspection of schools.

Dr. Weinberg lectured and examined school children in Williamsburg, Clarendon, Georgetown and Abbeville Counties. He opened the first dispensary in the State in Clarendon County, July 15, 1911, and conducted dispensaries in this county and in Beaufort County.

Dr. Routh, since his appointment, June 20, 1911, has spent his entire time in Hampton County, where he has done excellent work against great odds.

Dr. Rowell, who was appointed July 1, 1911, assisted Dr. Weinberg in Clarendon County, and later did dispensary work in Beaufort and Marion Counties.

Dr. Rodgers commenced work October 1, 1911. After assisting Dr. Howell in Marion County, he took charge of Board of Health exhibit at the County Fair in Orangeburg. This exhibit attracted considerable attention and received many favorable comments from the papers. The presidents of the two negro colleges in Orangeburg were interviewed and 200 mailing cases were left at Claflin University. Since leaving Orangeburg, Dr. Rodgers has been in Richland County advertising the dispensaries which will be opened January 1, 1912. Placards in all of the trolleys and slides used in the moving picture shows, in addition to the ordinary methods of advertising, will doubtless bring good results. Dr. Rodgers also spent three days at the South Atlantic Corn show in this city, distributing literature and explaining the hookworm campaign.

The work of the year has been very satisfactory, except the attendance at the dispensaries is not as large as we hoped for. The fact that many of the counties have no right to appropriate funds for anything except ordinary county purposes, and the fact that the appropriation for the State Board of Health is entirely inadequate, is a great handicap in our work.

SANITATION IN THE COUNTIES.

In order that the statistics from the several States and from the counties in each State where the hookworm work is being done might be uniform so that comparison might be made, it was decided to divide the privy types into different classes, each having a percentage basis as follows:

SANITARY VALUES PLACED ON VARIOUS TYPES OF PRIVIES.

Value.

- Class F. 0%—Failure to have any kind of privy.
- Class E. 10%—Ordinary privy open behind, unguarded against flies, chickens, hogs and rain.
- Class D. 25%—Same as above, but with hinged door in rear coming down to ground.
- Class C. 50%—Privy with covered seat, closed hinged door in the rear and water-tight pails—but building not fly-proof.

Class B. 75%—Similar to above, but fly-proof and well kept.

Class A. 100%—Sewer system with water closets; also L. R. S. privies.

The sanitary efficiency is arrived at in the following manner:

100 at 100% (Class A) .. .	10000
100 at 75% (Class B) .. .	7500
100 at 50% (Class C) .. .	5000
100 at 25% (Class D) .. .	2500
100 at 10% (Class E) .. .	1000
1000 at 0% (Class F) .. .	000
<hr/>	<hr/>
1000	1000) 26000
	<hr/>
	26%

It will be seen by the above that the total number of observations for each class is multiplied by the percentage basis for that class, and the products obtained are added—and divided by the total number of observations in the county.

The sanitary efficiency of Marion, Clarendon, Hampton and Beaufort Counties appears below.

SANITARY EFFICIENCY.

Marion County:

200 at 10% (Class E) .. .	2000
595 at 0% (Class F) .. .	000
<hr/>	<hr/>
795	795) 2000 2.5%

Clarendon County:

92 at 10% (Class E) .. .	920
128 at 0% (Class F) .. .	000
<hr/>	<hr/>
220	220) 920 4%

Hampton County:

 - Regulation by State Board of Education... ..None
 - Regulation by County Boards of Health....No County Boards

Regulation by municipal Boards of Health: Sewerage systems in two cities; compulsory sanitary privy law in one.

No. sanitary privies built (Not recorded.)

IV. By-products:

1. See under No. 9.
2. No Health officers for counties.
3. General Board of Health work advertised, resulting in increased usefulness of laboratory to physicians.

V. Expenditures:

By State: \$291.98 for office expenses, exhibit, etc.

By counties: None except for purchasing thymol.

In concluding my report, I would call your attention to the fact that contrary to the general belief, the infection is heavier among the whites than among the negroes. An examination of the students of Clemson College showed an infection of 33%, and an inspection of the Furman students 38%, whereas an examination of the students of the State College for Negroes showed only 20% infection. A comparison of microscopic examination at the dispensaries revealed the same fact. The field force, composed of Drs. Weinberg, Routh, Howell and Rodgers is doing splendid work, and we hope through the dispensaries to reach a large number of sufferers during 1912.

(Signed) J. LABRUCE WARD,
Director Rural Sanitation.

FOOD AND DRUGS.

This work is being carried on by the Commissioner of the Department of Agriculture, Mr. E. J. Watson. However, we think that if sufficient funds were provided the State Board of Health should do this work as it should come directly under their supervision.

LABORATORY.

Dr. F. A. Coward, with the able assistance of Mr. Cain, is carrying on a work that would be a credit to any State. He is personally manufacturing the anti-rabies serum and administering same to patients at this office. He also manufactures the anti-typhoid bacterin, personally bottling the ampules containing this serum. In addition, this laboratory makes blood tests for

typhoid fever and other contagious diseases, and examinations of sputum for tuberculosis, examinations of feces for hookworm and such other work as it finds necessary to do in the study of the prevention of contagious diseases. Dr. Coward and Mr. Cain give their entire time to this work. Mr. A. S. Williams, employed by the Rockefeller Commission, assists in the examination for hookworm and has given satisfactory service. The particulars of Dr. Coward's work is given under the head of "Report, Director of Laboratory, State Board of Health," contained in this pamphlet.

EDUCATIONAL CAMPAIGN.

The Board has issued this year the following bulletins: Measles and Whooping Cough, Clean-Up Day, Cancer, and Rabies, or Hydrophobia. These bulletins have met with appreciation by the public and we have constant demand for them. Several editions have been required of some of them, owing to the great demand. We have, however, found it necessary to discontinue issuing them monthly, as the cost was too great to take out of our much-taxed contingent fund.

THE BOARD'S QUARTERS.

The Board is comfortably housed in rooms on the east wing, lower floor, of LeConte College, Gibbes' Green, corner of Pendleton and Pickens Streets. We hope that when the contemplated State House is completed that suitable quarters will be given the Board.

Minutes of the Meetings Executive Committee, State Board of Health.

SPECIAL MEETING.

Columbia, S. C., March 15, 1911.

A special meeting of the Executive Committee of the State Board of Health was held this day at its office and was called to order by the Chairman with the following members present: Drs. Wilson, Burdell, Gambrell, Hines, Egleston, Lester, Dodson and the Secretary and State Health Officer.

The Chairman stated that the purpose of the meeting was to consider the following Concurrent Resolution, and to take whatever steps the Board deemed best to carry out its requirements, and to consider any other matters that might be brought to the attention of the Board by the Secretary.

A CONCURRENT RESOLUTION.

Be it resolved by the House of Representatives, the Senate concurring, that the State Board of Health is hereby required, at as early day as possible, to make a thorough investigation of the sanitary condition of the State Penitentiary, and to take such steps as they may deem necessary to prevent the spread of tuberculosis among the convicts at the said State Penitentiary.

Any expense that may be incurred in putting the Penitentiary in a sanitary condition shall be paid out of the funds of the penitentiary.

After a discussion as to the meaning of the foregoing resolution, the Board, upon motion of Dr. Lester, visited the penitentiary for the purpose of making a thorough inspection of the prisoners, buildings and grounds.

Upon their arrival at the penitentiary, the members of the Board were met by Col. D. J. Griffith, Superintendent, and Dr. Frank P. Butler, Prison Physician, who accompanied them on their tour of inspection.

The Board re-convened at 8:15 p. m. with all of the above mentioned members present, and took up in order its findings on

inspection. After a thorough discussion of these findings, the following resolutions were offered and adopted:

Resolved, That it is the sense of the entire Board that the female prison building should be condemned and destroyed, and that a new building should be constructed at the earliest date possible; that to meet present needs the sick from this building be removed to a ward in the general hospital, and that all tuberculous patients be removed to the tuberculosis hospital.

Resolved, That it is the sense of the Board that the following changes should be made in the male prison building: That the present system of toilets arranged in the interior of the building should be placed in an extension outside of the building, and in addition to the four toilets to each floor, two urinals should be added, so that the present method of voiding urine into buckets and pouring it into the toilets can be done away with; that the floors in all the cells be repaired, where repairs are needed; that the bedding of prisoners be kept clean; that only one prisoner be allowed to sleep in each cell, and that some provision be made whereby prisoners on going to their cells for the night can procure their drinking water from a running spigot rather than dip it out of tub, as is the practice at present.

Resolved, That after a thorough consideration of all the phases of hygiene and sanitation in connection with the work in the hosiery mill, it is the sense of the entire Board that this form of employment should be discontinued, and that work of an outdoor nature should be provided.

Resolved, That we condemn the present toilet arranged in the general hospital building, and recommend that toilets and baths in accordance with modern sanitary ideas be installed; that the building be generally cleaned; that a ward be set aside for white women and one for colored women; that proper isolation wards be provided and that the entire building be thoroughly screened.

Resolved, That in the tuberculosis hospital we find nothing, with the exception that it is not screened, to condemn, but much to commend. We find that this building measures up to all the requirements of modern ideas for the care and treatment of tuberculous patients, and we feel that it is a lasting monument to Col. D. J. Griffith, who designed and built it. We recommend that this building be thoroughly screened; that wards be set aside for white and colored women, and that the races and sexes be segregated.

Resolved, That we recommend the screening of the mess hall and kitchen, to keep out insects; that the stables and pig pens be removed as far from the living quarters as practicable, and that they be kept thoroughly clean to prevent the breeding of flies.

Resolved, That we condemn the present medical system as inadequate and inefficient. We recommend the employment of a chief physician and an assistant. We recommend the employment of a sufficient number of white and colored, male and female, trained nurses for the sick.

Resolved, That the Committee on State Penal and Charitable Institutions, together with the Secretary and State Health Officer and the Director of the Laboratory, make a physical and bacteriological examination of all suspected cases of tuberculosis in the institution, and report to the Board at its next meeting.

The Secretary requested the Board to raise the salary of Miss Sadie D. Pinckney from twenty-five dollars to forty dollars per month, which was unanimously done, the raise to begin with the current month.

The Secretary presented his resignation, which was read by the Chairman. It was moved and carried that no action be taken until the annual meeting in April.

There being no further business the Board adjourned to meet at the St. John Hotel, Charleston, April 17th, at noon.

Attested:

JAS. A. HAYNE,
Secretary.

ANNUAL MEETING.

Charleston, S. C., April 17, 1911.

The annual meeting of the Executive Committee of the State Board of Health was held this day at the St. John Hotel, and was called to order at noon by the Chairman with the following members present: Drs. Wilson, Gambrell, Hines, Burdell, Egles-ton, Lester, Dodson and the Secretary and State Health Officer.

Minutes of the last regular meeting were read and approved.

A letter from Dr. F. L. Parker with reference to membership in the Association of Official Agricultural Chemists was pre-

sented, whereupon it was moved that Dr. Parker be enrolled as the official representative of the Board.

Letters from Drs. R. E. Mathias of Irmo and W. A. Woodruff of Catechee requesting reimbursement for diphtheria antitoxin that had been used in their practice were also presented. Upon motion the Secretary was directed to notify Drs. Mathias and Woodruff that they could be reimbursed only on the basis of the price now being paid for antitoxin by the Board.

A resolution from the Board of Health of Orangeburg with reference to the resignation of the Secretary was received as information.

The report of Dr. Allen J. Jervey of the smallpox epidemic at Midland Park, Charleston County, to the Chairman was presented, together with his bill in blank form. In view of the fact that a part of the services rendered should be charged to the Western Union Telegraph Company in whose employees the epidemic occurred, the bill of Dr. Jervey, upon motion of Dr. Gambrell, was left to be arranged by the Chairman and Secretary.

The Chairman stated that he had taken up with Dr. Wickliffe Rose, Administrative Secretary of the Rockefeller Sanitary Commission, the question of supplementing the salary of the Secretary, but had not heard from Dr. Rose.

Upon motion of Dr. Lester, the Secretary was requested to withhold his resignation, pending the action of the Rockefeller Commission. The Secretary stated that he would gladly do this, but that he would like for the Board to adopt a provisional resolution whereby his resignation would be accepted by the Chairman, in event satisfactory arrangements could not be made with Dr. Rose. This was done.

The committee appointed at the called meeting, March 15th, to examine physically and bacteriologically the prisoners of the penitentiary suspected of tuberculosis, presented the following report:

Charleston, S. C., April 17th, 1911.

*To the Chairman and Members of the Executive Committee,
South Carolina Board of Health.*

Gentlemen: In compliance with the resolution adopted at the called meeting of your Board, March 15th, directing the Committee on State Penal and Charitable Institutions, together with the State Health Officer and Director of the Laboratory, to make

a physical and bacteriological examination of suspected cases of tuberculosis at the State Penitentiary, we beg to submit the following report:

The Committee met at Columbia, March 23rd, at 9 a. m., Dr. Burdell having been substituted by order of your Chairman for Dr. Hall, who had notified the Chairman of the Committee that he would be unable to attend.

The committee proceeded to the State Penitentiary where, in company with Dr. T. E. Jennings, acting prison physician, physical examinations were begun.

During the 23rd and 24th 70 physical examinations were made with the following result:

Twenty-one (21) prisoners—Clinical symptoms and physical findings indicative of tuberculosis.

Twenty-one (21)—Suspicious, but less marked.

Twenty-eight (28)—Negative.

Bacteriological examinations were made in sixty-eight (68) cases, with one (1) positive. It should, however, be stated that the bacteriological examinations were unsatisfactory, for the reason that the specimens in the first instance were collected during the course of the physical examination—and in the second instance, forty-nine (49) specimens were collected by the prisoners themselves, while in their cells for the night.

Respectfully submitted,

(Signed) C. C. GAMBRELL, Chairman.

Upon motion of Dr. Gambrell the resolutions adopted tentatively at the last meeting were taken up for final action. All resolutions were adopted as recorded in preceding minutes, and in addition thereto it was moved that the Board of Directors of the State Penitentiary be requested to submit the plans of all contemplated changes as recommended by the Board to it, for its approval.

The officers of the Board were unanimously re-elected for the ensuing year.

There being no further business the Board adjourned at 3:15 p. m. to meet at the call of the Chairman.

The following report of the Chairman was rendered to the President and Members of the House of Delegates, South Carolina Medical Association:

Chairman's Report to the State Board of Health.

Gentlemen: I have the honor to present the 31st Annual Report of the Executive Committee of the State Board of Health.

The epidemic of smallpox still continues, but in very mild form and owing to very extensive vaccination need cause no apprehension. One death was recently reported from Charleston County. This case was one of fourteen which occurred among a gang of employed at the seven-mile junction, near Charleston, and which were imported from Bennettsville. No spread of the disease from this focus has taken place.

Last April the epidemic of acute anterior poliomyelitis which had appeared in other portions of the country reached South Carolina. While sporadic cases had occurred from time to time for a number of years, this was the first epidemic of the malady noted in our State. The outbreak apparently reached its height in August and then began to decline. After the first of December no new cases were reported. We had information of eighty-five cases appearing in nineteen counties. The most striking features in connection with these cases were, 1st, that no two cases occurred in the same house, and 2nd, that no sickness of any kind was reported as occurring coincidentally with poliomyelitis in a household except in two instances and these were diagnosed as malaria.

If we may judge from the experience of other States, we have reason to fear the continued prevalence of this obscure malady during the coming summer. We do not know its cause, and we are equally ignorant of its mode of transmission. It behooves us, therefore, to gather together and to record all the data we can obtain in the hope of throwing some new light upon the prevention of this disease. We, therefore, earnestly implore each and every one of you to join us in this work, and to furnish us with the fullest possible information regarding the cases that may fall under your observation.

The hookworm work has been presented with unabated zeal and vigor by Dr. Ward and his enthusiastic corps of assistants, Drs. Bell, Weinberg and Baynard. The results of this work will be more far reaching than the mere suppression of hookworm disease, however important this may be. The sanitary instruction which these men are giving is already opening the eyes of

numbers of the country folk to practical sanitation and is teaching them lessons of hygiene, which, by leading to the prevention of disease, is bound to raise the physical, moral and intellectual standard of citizenship. We earnestly solicit your sympathy and aid in this great undertaking.

The cases of beri-beri continue to be reported from the neighborhood of Charleston. One sporadic case occurred on Sullivan's Island last summer. Three cases have recently occurred at the stockade in which the outbreak of last year took place and two other cases from the stockade in St. Andrew's Parish have also been reported.

A conjoint resolution passed at the last session of the General Assembly required the Executive Committee of the State Board of Health to visit and inspect the State Penitentiary with special reference to the reported prevalence of tuberculosis among the inmates. This we have done, and will transmit a report of our findings together with recommendations to the proper authorities at the earliest moment practicable.

It is most gratifying to note the steadily increasing usefulness of the State bacteriological laboratory as shown by the increasing demands made upon it by the profession of the State. During the months of December, January and February, 1909-'10, 494 examinations were made, while in the corresponding months of 1910-'11 the total number of examinations had grown to 1,007. A falling off in the number of cases of rabies is to be noted. During this same period, 1909-'10, 40 cases were treated, while in the same period in 1910-'11 the number treated had fallen to 28. The growth of this department is sufficient testimony to the efficiency and faithfulness of the Director, Dr. Coward.

The unremitting activity of the Health Officer has enabled the Executive Committee to publish twelve monthly bulletins as follows:

The House Fly and Mosquitoes.

Typhoid Fever.

Scarlet Fever and Diphtheria.

Clean Milk in the Homes.

Hookworm Disease.

Medical Inspection of Schools.

Poliomyelitis.

Tuberculosis.

Pellagra.

Whooping Cough and Measles.

Clean-Up Day.

The House Fly and Mosquitoes, revised.

Three of these publications were prepared by the laboratory department.

It is with deep regret that we have to report that the resignation of Dr. C. F. Williams has been laid before us.

The efficiency of Dr. Williams is thoroughly appreciated by all of you. That our State Board of Health is now carrying on the high grade of work which has brought it recognition throughout the country is due to his untiring efforts prompted by his genuine love for his work. His resignation, however, has not received final action, as we are endeavoring to arrange matters in such a way that his services may be retained for another year at least. In the meantime it is incumbent upon each of us to use his utmost efforts to educate his legislators to a just appreciation of the incalculable value to the State of efficient public health work, and to make them realize that the health officership should be adequately supported. It is impossible for us to obtain and to hold the services of the kind of man we want for the miserably small salary that is now paid. Let us then unite in the endeavor to induce the General Assembly at the next session to raise the salary of this official to a figure which will be commensurate with the importance of the office.

Respectfully,

(Signed) ROBERT WILSON, JR.,

Chairman Executive Committee State Board of Health.

Attested:

JAS. A. HAYNE,

Secretary.

CALLED MEETING.

Columbia, S. C., May 11th, 1911.

A called meeting of the Executive Committee of the State Board of Health was held this day at the Board's office, and was called to order by the Chairman at 10 p. m., with the following members present: Drs. Wilson, Gambrell, Hines, Burdell, Egleston, Lester, Dodson and the Secretary and State Health Officer.

Minutes of the last meeting were read and, with corrections noted below, approved.

Correction—Dr. Burdell resolved that the rules governing transportation of the dead be revised; that Rule 1 be done away with, and the diseases mentioned therein be classed with those mentioned in Rule 2. Seconded and carried.

The Chairman stated that the purpose of the meeting was to elect a State Health Officer to succeed Dr. Williams, whose resignation became effective upon receipt of the following communication, which was read to the Board.

Washington, D. C., April 26th, 1911.

Dr. Robert H. Wilson, Jr., Charleston, S. C.

Dear Sir: The proposition contained in your letter of April 6th has been the subject of long consideration by the Executive Committee of the Rockefeller Sanitary Commission. The Commission has finally reached the conclusion that it would be inadvisable for the Sanitary Commission to contribute any sum to be used in supplementing the salary of Dr. Williams as Secretary of the State Board of Health. The members of the Commission thoroughly appreciate Dr. Williams' effective service and realize that his resignation will be a great loss to the State of South Carolina. The Committee has been strongly disposed to do all in its power to make an arrangement that would enable your Board to retain him in his present position, but in view of the fact that this salary has been fixed by the State, the act of the Commission in voting a sum to supplement this salary might be regarded as an undue interference. If this criticism should be raised you will readily see the harm that would result to the whole service. It is the judgment of the Executive Committee that the Commission should guard itself against even the appearance of unduly interfering in local affairs.

Regretting that we have not been able to find a way to aid you in this emergency, I am

Very sincerely yours,

(Signed) WICKLIFFE ROSE,

Administrative Secretary, the Rockefeller Sanitary Com'n.

The Chairman presented applications from the following physicians: Drs. W. J. Burdell, J. A. Hayne, T. G. Kershaw, F. W. P. Butler, R. E. Mason, James E. Daniel, R. T. Jennings, C. H. Pate and E. A. Hines.

Dr. Burdell asked permission to absent himself from the room, as he was an applicant, which was granted.

Dr. Hines' application was conditional, and after a full discussion of the conditions involved, he withdrew his application.

Election by ballot was then entered into, resulting in the election of Dr. James Adams Hayne.

At the request of Dr. Williams, Drs. Lester and Eggleston were appointed a committee to audit his accounts during his service as Secretary and State Health Officer.

The following resolution was offered by Dr. Hines and unanimously adopted:

Resolved, 1st. That the Executive Committee of the State Board of Health express its high appreciation of the work of Dr. C. F. Williams as Secretary and State Health Officer since his connection with this Board.

Resolved, 2nd. That his services to the citizens of this State in public health work have placed him in the first rank of sanitarians in this country, and thus has reflected credit upon the State Board of Health of South Carolina.

Resolved, 3rd. That these resolutions be spread upon the minutes, a copy transmitted to Dr. Williams, and that they be published in the daily press.

There being no further business the Board adjourned to meet at the call of the President.

Attested:

JAS. A. HAYNE,
Secretary.

SPECIAL MEETING.

Columbia, S. C., June 7th, 1911.

A special meeting of the Executive Committee of the State Board of Health was called by the Chairman to meet with the Board of Directors of the State Penitentiary, Columbia, to consult with said Board in regard to the advisability of taking steps towards closing the hosiery mill at the State Penitentiary, said mill having been investigated by a committee of the Executive

Committee of the State Board of Health in pursuance of a resolution passed by the General Assembly at its session, 1911.

The following members of the Board met with the directors of the State Penitentiary: Drs. Robt. Wilson, Jr., Chairman; Burdell, Egleston, Gambrell, Hines, Lester and the Secretary and State Health Officer.

Dr. Wilson spoke to the Board of Directors of the Penitentiary and advised the closing of the mill, and was followed by Drs. Gambrell, Lester and Egleston, all of whom urged the necessity for the closing of the mill on account of the prevalence of tuberculosis in said mill—the operatives working under such conditions as to make it impossible to lessen the number of cases of tuberculosis and to limit the spread of the disease.

Gov. Blease and several Directors of the State Penitentiary spoke; among them was Mr. Jno. G. Mobley, who stated that he did not care to put himself in the absurd position as differing with the State Board of Health in sanitary matters, but that the Directors only asked for a reasonable length of time to make arrangements with Mr. Graham to annul contract and to arrange for other work for the convicts employed in the hosiery mill.

There being no further business, the Board adjourned *sine die*.

Attested:

JAS. A. HAYNE,
Secretary.

JULY MEETING.

Columbia, S. C., July 19th, 1911.

The regular quarterly meeting of the Executive Committee of the State Board of Health was held this day at its office and called to order by the Chairman at 3 p. m., with the following members present: Drs. Wilson, Chairman; Burdell, Dodson, Egleston, Gambrell, Lester and J. Fraser Lyon, Attorney-General.

Attorney-General Lyon being consulted in regard to the State Board of Health's right to compel the closing of the hosiery mill, stated that the Board of Health could only act in an advisory capacity towards the Penitentiary Commissioners.

Upon motion of Dr. Gambrell, seconded by Dr. Egleston, a resolution was adopted that Rule 8 ("Every disinterred body, dead from any disease or cause, shall be treated as infectious or danger-

ous to the public health and shall not be accepted for transportation unless said removal has been approved by the State or Provincial health authorities having jurisdiction where such body is disinterred, and the consent of the health authorities of the locality to which the corpse is consigned has first been obtained; and all such disinterred remains shall be enclosed in a hermetically sealed (soldered) zinc, tin or copper-lined coffin or box. Bodies deposited in receiving vaults will be treated and considered the same as buried bodies,") of the Rules of the South Carolina State Board of Health, for the Transportation of the Dead, covers a communication, which was read, from Mr. Jas. H. Brice, about the transportation of a body dead for twenty-five years, and sees no necessity for changing said rule.

Dr. C. C. Gambrell moved that the State Health Officer and the Superintendent of Laboratories prepare typhoid bacterin for free distribution. This motion was seconded and carried.

A resolution was introduced by Dr. Burdell, that the Committee on State Penal and Charitable Institutions investigate the State farms. This motion was seconded by Dr. Egleston and adopted.

The State Health Officer made a verbal report of work done since his election, which consisted of an investigation of the disposal of sewage in Lancaster, S. C. Investigation of small-pox in New Brookland, Lugoff and Jalapa. A trip to Clemson College in regard to its ventilation and lectures on Public Health at Blackstock and Ridge Springs.

There being no further business, the Board adjourned to meet at the call of the Chairman.

Attested:

JAS. A. HAYNE,
Secretary.

Since the last meeting the Secretary has received the following committee appointments from the President, which are here appended as a part of the minutes:

STANDING COMMITTEES.

Ordinances and Sanitary Code—Drs. Jas. A. Hayne, W. M. Lester, Attorney-General Lyon.

Epidemic and Endemic Diseases—Drs. Jas. A. Hayne, W. M. Lester, C. C. Gambrell.

Registration of Vital Statistics—Drs. Jas. A. Hayne, Wm. Egleston, Comptroller-General Jones.

Sanitary Condition of State Penal and Charitable Institutions—Drs. C. C. Gambrell, W. J. Burdell, W. M. Lester.

Sanitary Inspection of Schools—Drs. E. A. Hines, W. J. Burdell, H. T. Hall.

Local and Sub-Boards of Health—Drs. Wm. Egleston, E. A. Hines, Attorney-General Lyon.

OCTOBER MEETING.

Columbia, S. C., Oct. 12th, 1911.

The regular quarterly meeting of the Executive Committee of the State Board of Health was held this day at the Board's office and called to order by the Chairman at 9:30 a. m., with the following members present: Drs. Wilson, Gambrell, Hines, Burdell, Egleston, Lester, Dodson and the Secretary and State Health Officer.

The minutes of the last meeting were read and approved.

This being the meeting at which applicants for license to embalm are examined, the Board proceeded with the examination after considering the credentials of those present for the examination. The following persons were admitted to the examination:

Boyter, Chas. L., Woodruff, S. C...	93½
Daniel, E. C. (failed), Cowpens, S. C...	71½
Dawson, C. V., Charleston, S. C...	94¼
Ford, J. Clyde, Clover, S. C...	82¼
Harleston, R. O. (colored), Charleston, S. C...	82½
Holmes, R. F. (failed; col.), Charleston, S. C...	40
Lowrance, S. E., Chester, S. C...	91½
Moesner, J. C., Mt. Pleasant, S. C...	75¼
Nichols, Wm. (failed), Orangeburg, S. C...	34
Oulla, E. L., Florence, S. C...	87½
Parish, J. L., Langley, S. C...	80½
Putnam, J. B., Belton, S. C...	87½
Riley, Jas. (failed; col.), Beaufort, S. C...	44

Stoney, A. R. (colored), Bennettsville, S. C...	75
Taylor, C. E., Lexington, S. C...	83½
Wright, W. H. (colored), Charleston, S. C...	77½

The examination consisted of practical work on the cadaver and the following written questions:

QUESTIONS.

- No. 1. Define embalming.
- No. 2. Name the principal cavities of the body, where located and contents.
- No. 3. Where is the femoral artery, radial artery, carotid artery and brachial?
- No. 4. Locate base and apex of heart.
- No. 5. How would you tap right auricle for removal of blood?
- No. 6. What arteries are generally used for injecting embalming fluid, and where are they located?
- No. 7. What do you understand by the term putrefaction (a) What causes increase rapidity of putrefaction and what retard?
- No. 8. How much blood can be drawn from an average adult body?
- No. 9. Describe how you would withdraw blood from the body.
- No. 10. What would you do with the blood drawn from a body dead of a contagious disease?
- No. 11. After embalming a body dead of scarlet fever, how would you disinfect yourself to prevent your being a carrier of the disease?
- No. 12. What is a disinfectant?
- No. 13. Name some disinfectants and their relative value.
- No. 14. Name the diseases you consider contagious and infectious.
- No. 15. How would you prepare a body dead of a contagious disease for shipment on railroad?
- No. 16. What is cavity embalming, and how long can a body be kept after this process alone?
- No. 17. Describe how you would disinfect a room where a contagious disease has existed.
- No. 18. If called to embalm a body, how would you proceed to determine whether death had really occurred? In other words, what are the positive signs of death?

- No. 19. What difficulties are encountered in embalming a body dead from gun-shot, railroad accidents, injuries, etc.?
- No. 20. In injecting embalming fluid into brachial artery, how does the fluid reach the heart? *i. e.*, through what arteries does it pass?

When the written examination was completed, all applicants were conducted to the undertaking parlors of McCormick & Pletcher, where they were required to show their fitness to embalm from a practical standpoint.

During the written examination the Board proceeded with its regular business. The following telegram was received from Dr. H. T. Hall:

*Dr. Robt. Wilson, Jr., Chairman State Board of Health, care
Dr. Jas. A. Hayne, Columbia, S. C.*

Inability to do my duty on account of continued bad health compels me to tender you this my resignation as member of Board from Second District, S. C. I deeply regret having to do this. I trust it will enable Board to fill my position without delay, is reason for telegraphing this.

(Signed) H. T. HALL.

It was moved that Dr. Hall's resignation be accepted, and the Secretary was instructed to so inform Dr. Hall, and also to express to him the regret at the news of his ill health and the hope that he might soon recover.

Dr. Hall's resignation creating a vacancy from the Second District, the Board proceeded to elect a member to fill the vacancy. Dr. D. B. Frontis of Ridge Spring was unanimously elected to fill the vacancy, and the Secretary was instructed to notify Dr. Frontis, and also to notify the Governor of Dr. Frontis' election.

A report from Dr. Coward was read showing the cost of the manufacture of typhoid antitoxin and the general work of the laboratory. The Board desired to raise Dr. Coward's salary, but could not do so this year. A resolution was passed, commending Dr. Coward for his excellent work, and the Secretary was ordered to have same published in the State papers. Dr. Hayne and Dr. Hines were appointed a committee to draft suitable resolution.

Dr. Ward, Director of Rural Sanitation, and Dr. Hayne, State Health Officer, were appointed a committee to arrange an exhibit for the State Fair, demonstrating some of the work done by the State Board of Health, and to make such financial arrangements that would cover said exhibit.

A committee from Orangeburg came before the Board in regard to the Great Branch Fishery Pond. Many arguments and letters pro and con in regard to the effect of this pond on the health of the community was presented to the Board. The State Health Officer reported that he had visited the pond and deemed it the probable cause of the increase of malaria around its borders, but could not give a positive opinion on account of the unusual drought that prevailed at the time of his visit.

It was moved and seconded that a committee of three be appointed by the Chairman to visit this pond, and report on conditions found at the next meeting. The committee appointed by the Chairman was as follows: Drs. Jas. A. Hayne, W. M. Lester and E. A. Hines.

It was moved and seconded that the Board meet as a body on December 1st, at 3 p. m., at the Jerome Hotel, and proceed to the State Penitentiary to make an investigation as to the sanitary conditions there present, especially in regard to the prevalence of tuberculosis in the hosiery mill.

There being no further business, the Board adjourned at 6 p. m. to meet at the call of the Chairman.

Attested:

JAS. A. HAYNE,
Secretary.

DECEMBER MEETING.

Columbia, S. C., Dec. 1st, 1911.

The regular quarterly meeting of the Executive Committee of the State Board of Health was held this day at the Jerome Hotel and called to order by the Chairman at 3 p. m., with the following members present:

Drs. Wilson, Chairman; Dodson, Egleston, Frontis, Gambrell, Hines, Lester and the Secretary and State Health Officer.

The minutes of the last meeting were read and approved.

After a discussion, the Board visited the penitentiary for the purpose of making a thorough inspection, having previously

acted upon a Concurrent Resolution passed by the General Assembly at its session, 1911, in order to see if the recommendations embodied in the resolutions passed by the Board had been carried out. Upon their arrival at the penitentiary, the members of the Board were met by Col. D. J. Griffith, Superintendent, and Dr. T. E. Jennings, Prison Physician, who accompanied them on their tour of inspection. A most careful examination was made.

After inspecting the penitentiary the Board reconvened at its office at 9 p. m. with all of the above-mentioned members present. The question of the condition of the penitentiary was first considered, and it was found that many improvements had been made, but Resolution No. 1 had not been carried out. Resolution No. 2 had been carried out in part; the sewerage was much improved, new stool and toilets had been provided, but the outside tower had not been constructed, as recommended, on account of great additional cost; however, present arrangement is very satisfactory and a great improvement over old conditions. We would suggest that the toilet arrangements be screened from main building to prevent flies from gaining access thereto. We find that new cuspidors have been provided, and that the cells are much cleaner than formerly. We were informed that improvements had been made in method of obtaining water, which is now poured into the buckets used by the convicts, instead of allowing each convict to use his bucket as a dipper.

Resolution No. 3 was reaffirmed. No changes that have been made, or that could be made, can make such a form of employment permissible from a hygienic view point.

Resolution No. 4 has been carried out to a considerable extent and many improvements made. The toilets should be screened and the building screened.

Resolution No. 5 has not been carried out. The building has not been screened, nor has provision been made for women.

Resolution No. 6 has partially been carried out. The mess hall and kitchen have been screened and the rooms are kept clean.

Resolution No. 7 has been carried out to a considerable extent. Since previous visit, a pharmacist has been employed and two nurses are in training; a drug store well stocked and neatly kept adds much to this department.

Upon request, proposals were submitted for furnishing diph-

theria antitoxin to the State of South Carolina by the following firms:

Schieffelin & Co., New York, N. Y.

H. K. Mulford Company, Philadelphia, Pa.

National Vaccine and Antitoxin Institute, Washington, D. C.

H. M. Alexander & Co., Marietta, Pa.

The contract was awarded to H. M. Alexander & Co. Their bid was as follows:

Dr. James A. Hayne, Secretary S. C. State Board of Health, Columbia, S. C.

Dear Sir: In accordance with your specifications, we will be glad to distribute throughout the State of South Carolina Alexander's Concentrated and Refined Diphtheria Antitoxin, propagated after the Gibson & Banzoff method, in ready to use sterile syringes carefully packed in wooden boxes so as to prevent breakage, at the following prices:

1,000 units.	\$0.50
3,000 units.	1.35
5,000 units.	2.00

We will have stocked in all towns of over 500 inhabitants, or in towns that may be designated by the Board, a supply of diphtheria antitoxin to be distributed by local distributors, who shall be appointed in the approval of the Board. It is suggested that druggists be allowed this privilege, and we agree to compensate them with a 10 per cent. commission for their trouble in distributing and caring for the antitoxin. We also agree to furnish a blank form in triplicate clinical reports, or any other printed matter that might be deemed advisable by the Board, to assist in keeping a record of the cases of diphtheria throughout the State and of the antitoxin distributed. We further agree to keep on file a record of all antitoxin distributed at the various depots. A card, such as sample submitted with this bid, will be used for this purpose, showing expiration date of antitoxin, laboratory number and date of shipment, which will enable us to notify the distributor when antitoxin becomes out-dated and call for its return, and replace same with a fresh stock. We can, with this system, guarantee to keep a fresh supply of antitoxin in each depot at all times without trouble to the Board.

A card will be mailed to the distributor every sixty days calling for report of stock on hand. This report will be compared with the record kept in the office of stock shipped, and account balanced every sixty days. In this way the distributor cannot delay sending receipts of antitoxin distributed, and the Board can call for statement at any time to ascertain the amount of antitoxin distributed during the previous months of the year.

We further agree to keep a clerk in Columbia, at a salary not more than \$25.00 per month, who will carry a full stock of antitoxin to meet the emergency demands of the distributors throughout the State, and to relieve the Board of detail work which is bound to occur in the distribution of antitoxin, and who shall be at all times under the direction of the Board.

We will also further agree to notify each doctor and newspaper throughout the State of the plan inaugurated.

Each package will be wrapped in a special wrapper, bearing the name of the South Carolina State Board of Health, directions for its use, also the name and addresses of the manufacturer, and also any other printed matter that may be deemed advisable by the Board.

This plan is merely a suggestion, and in case the same does not meet with the approval of the Board, the writer will be glad to explain various other plans which are now in operation in other places at the meeting of the Board in Columbia on December 1st.

Our antitoxin is prepared under government license No. 3, complying with the laws of the Marine Hospital Service at Washington, and is, therefore, considered standard. Our product has been accepted by sixteen individual boards of health, who are now supplying antitoxin.

Our enormous board of health business has made it necessary to establish a department who devote their entire time to the distribution of antitoxin under the directions of the various boards of health. Their selection of our product in preference to that of other manufacturers has proven to us conclusively that the high grade antitoxin which we offer is second to none propagated in this country, and that the container in which it is finished is especially adapted for board of health purposes, being simple, aseptic and convenient.

It has proven that our efforts to relieve the various boards of the detail work in distributing antitoxin to their constituents has been successful.

In case we are awarded the contract, same can be put in operation within fifteen days.

We are enclosing you herewith our certified check for \$1,000.00 guaranteeing the fulfillment of the contract in case same is awarded to us.

We are also sending under special cover packages of one, three and five thousand units of antitoxin for your inspection.

We make but the one grade, and guarantee same to be standardized according to the law.

Hoping that we may have the pleasure of filling this contract, we beg to remain,

Yours very truly,

DR. H. M. ALEXANDER & CO.,

By Chas. E. Speaks.

Dr. W. A. Boyd, City Health Officer, on behalf of the City Council, appeared before the Board and requested that Dr. Coward, Director of the State Board of Health Laboratory, be allowed to assist in establishing a municipal laboratory. Dr. Hines moved that inasmuch as the State Board was desirous of encouraging the establishment of municipal laboratories, Dr. Coward be allowed to render the necessary assistance. This motion was seconded and carried.

Dr. Lester moved that the State Board of Health advise that the owners of the Great Branch Fishery, Orangeburg County, be put in a sanitary condition by clearing out brush and properly draining. This motion was seconded and carried.

At the suggestion of the State Health Officer, Dr. Lester moved that Miss Pinckney's salary be raised from \$40.00 to \$50.00 per month as long as the funds will permit. This motion was seconded and carried.

The question of granting an undertaker's license to Mr. E. C. Daniels was discussed. In view of his excellent work on the practical examination, it was moved, seconded and carried that Mr. Daniels be granted a temporary license.

There being no further business, the Board adjourned at 11:30 p. m. to meet at the call of the Chairman.

Attested:

JAS. A. HAYNE,
Secretary.

Report of Committee on Sanitary Inspection of Schools.

To the Chairman of the Executive Committee of the State Board of Health:

We beg herewith to submit the report of the subcommittee on the sanitary inspection of schools.

Clemson College was visited Friday, November 24th. The suggestions made for a number of years by our committee have been carried into effect with reference to the necessity for a new cow barn and dairy. The dairy is a splendidly constructed building, costing \$20,000, and is in every way a model from a sanitary standpoint especially. Here ample provision will be made for the instruction of farmers, as well as pupils of the college, the best methods of handling milk both for home use and shipment. The building is well lighted, heated and ventilated. The walls are of cement plaster and can be cleaned when necessary. The basement floors are cement, and ample provision will be made for screening the building.

The cow barn will shortly be ready for use, and, like the dairy, is a model from a sanitary standpoint. The entire building, so far as the floors and walls are concerned, can be readily cleaned and kept so. The building will cost \$15,000.

The water supply of the college remains unchanged since our last report.

The dining hall has been renovated and considerable additions made to the dormitories. The advice of the Secretary and State Health Officer was sought in the matter of ventilation, etc.

The hospital should be abandoned and a new and larger building constructed. The heating facilities are inadequate, especially at the time of our visit patients were being transferred from one part of the building to another to avoid the smoke. This condition cannot be remedied. The health of the cadet corps has been good. The authorities appear anxious to keep it so, and from year to year we find improvement in the general sanitation of the institution.

The two crying needs of the institution are a new hospital and a new and well equipped gymnasium. Military training, valuable

as it is from a physical development standpoint, can be materially strengthened by systematic instruction in a well equipped gymnasium.

Winthrop College was visited November 26th. There was no evidence of serious sickness in the institution since our last visit. There has been no case of typhoid fever for about three years. To further strengthen this record continued vigilance was urged as to the use of screens. The hospital is entirely too small for the number of pupils now enrolled, and should be enlarged at once. In the presence of an epidemic the medical staff would be almost helpless as to isolation of patients.

The fire protection is very commendable. The fire escapes and fire drill appear effective.

The dairy and cow barn are well managed, and the new slaughter house lends to the sanitary aspect of the premises.

A modern gymnasium will shortly be constructed, and this feature should add greatly to the physical well-being of the girls and be conducive to good health.

The State Colored College at Orangeburg was visited November 27th. We had the benefit of the advice of the Secretary and State Health Officer at this place, Dr. J. Adams Hayne. There have been many improvements since our last visit. A new girls' dormitory and new dining hall have been added. These buildings are modern and comply with the ordinary requirements of sanitary laws. The surface closet system of the entire institution has been abandoned and connection made with the city sewerage.

The boys' dormitory is too crowded, and fire escapes entirely inadequate.

The dairy and cow barn are not up to the standard, but there is evidence of early improvement, as an experienced dairyman has just been placed in charge. Screens were insisted upon throughout the institution. There was very little sickness at the time of our visit.

The University of South Carolina was visited December 1st. There have been few changes since our last report. There have been three cases of typhoid fever this session, otherwise the health of the students has been good. The bubble fountains deserve commendation, but the mechanism should be improved to avoid infection.

A more modern dairy and cow barn should be built in order that the milk supply for the mess hall be better safeguarded. In

general the sanitary precautions of the University compare favorably with the other State institutions, considering the funds allowed for this purpose.

New dormitories are needed to prevent the overcrowded quarters which now prevails; if not remedied, will shortly be a menace to the welfare of the entire institution.

E. A. HINES, M. D.

Chairman Committee Sanitary Inspection of Schools.

At the request of Dr. Hines, the South Carolina Military Academy was inspected by Dr. Robert Wilson, Jr.

This institution still maintains the high sanitary standard which was noted in our last report. The dining room, kitchen and the opening of all drains have been completely screened against flies; scrupulous cleanliness is observed and care is taken that the swill from the pantry is disposed of promptly, thus avoiding disagreeable odors which would otherwise prevail.

The hospital is particularly deserving of commendation. With a southern and a western exposure, ventilation is ample and sunshine abundant. It is in charge of a trained nurse and is thoroughly modern in all of its appointments. A contagious ward, separated from the main ward, has been provided, and the entire hospital is effectively screened.

The drinking water is obtained chiefly from the artesian well situated upon the plaza near Calhoun street; a large vessel of which, with a single cup attached, is kept in the quadrangle for the use of the cadets. This unsanitary arrangement is to be condemned, and an effort should be made to institute some device by which the use of the common drinking cup may be avoided. The cistern water is used only for boiler purposes. The closets on the ground floor are flushed periodically by an automatic device. This style of closet is decidedly the most sanitary for a large institution, and it is proposed to construct these upon the other floors upon the same plan as soon as practicable.

The authorities of the Academy have taken pains to carry out promptly such suggestions as have been made by the Board of Health for the improvement of the sanitary conditions of the institution, and are to be congratulated not only upon the careful attention given to matters affecting the health of the cadets, but also upon the success of their efforts.

LABORATORY REPORT.

Dr. Robert Wilson, Jr., Chairman Executive Committee State Board of Health.

Sir: I submit herewith a report on the work done in your laboratory during the period from December 1, 1910, to December 1, 1911.

DIAGNOSTIC EXAMINATIONS.

Over 3,850 examinations of all kinds have been made, the number of each kind and the results obtained are set forth in the attached Table "A." This exceeds last year's work by over 1,000 examinations.

PASTEUR DEPARTMENT.

One hundred and fourteen people have received immunizing treatment against rabies. One of the cases developed the dread disease and died in spite of the treatment. This was a small boy badly bitten about the mouth. For the past two months we have been sending the treatment by mail to those requesting it, thus permitting home treatment by the family physician. No bad results have been reported from patients thus treated.

TYPHOID BACTERIN.

The preparation and distribution of typhoid bacterin was begun August 16. Since that time 3,550 immunizing doses have been sent out—no untoward results, infection or severe reaction has been reported from the use of this vaccine. The container now used has not proved entirely satisfactory, and a better one will be adopted during the coming year.

The method and technique of preparing the vaccine is patterned after that of the Army Medical School at Washington.

The laboratory has been fortunate in enlisting the services of Mr. J. R. Cain, who has been with us since June 1; to his painstaking and careful work the success of the year's routine work is largely due.

Mr. Arthur Williams has also rendered much-needed help with the hookworm diagnoses.

For the assistance of these gentlemen we are indebted to the Rockefeller Sanitary Commission, without whose aid their employment would not have been possible.

PROSPECTS FOR ENSUING YEAR.

It is the intention of the Director to make a thorough test of the efficiency of commercial disinfectants now being sold in South Carolina, and to issue a bulletin showing the results of these tests. Much fraud is now being practiced in connection with the exploiting and selling of such goods. The time has come when your Board must take a definite stand as to the value or worthlessness of these products.

The yearly increase in diagnostic work at the laboratory leads me to suggest that all municipalities establish diagnoses laboratories. These can be maintained at moderate expense, if the work be confined strictly to Board of Health work. It is our intention to issue a bulletin giving a list of necessary apparatus, the cost of same and methods and formulae for the various tests. Then a course of three or four weeks' free instruction will be offered at our laboratory to prepare men to conduct such local laboratories, each municipality being allowed to send one applicant, and to provide him with the proper credentials.

This will give the laboratory at Columbia more time for research and experimental work on some of our endemic, unconquered diseases.

For many courtesies and much assistance during the year the Director is indebted to the Boards of Health of New York City and of the City of Charleston, and to the directors of the Hygienic laboratory and the Army Medical School laboratories in Washington.

WATER ANALYSES.

To the Chairman and Members of the Executive Committee of the State Board of Health of South Carolina:

I have the honor to submit the following report of analyses of samples of water from the public water supplies of South Carolina, and of samples submitted by local boards of health, physicians and Winthrop Normal and Industrial College.

A total of 364 samples of water were received for sanitary, chemical and bacterial analyses, 266 from public water supplies, 64 from boards of health and physicians, and 34 from Winthrop Normal and Industrial College. Of the 266 received from public water supplies, 6 showed positive chemical or bacterial indications of contamination. Of the 41 samples received from boards of health and physicians, 22 showed positive chemical or bacterial indications of contamination. The samples received from Winthrop Normal and Industrial College showed no indications of contamination.

In cases in which the samples from public water supplies were found to be contaminated, additional samples were called for and check analyses made. In number of cases the check analyses showed the water to be free from contamination, indicating that the contamination was temporary, or that the first samples were contaminated in the sampling. In each case the probable sources of contamination were carefully investigated.

During the year the cities of Anderson and Yorkville have improved their supplies by the installation of filters. With the exception of two supplies, which from time to time show either chemical or bacterial indications of contamination, the quality of the water from the various public supplies is excellent, and every precaution seems to be taken to maintain purity. It is gratifying to note the marked improvement in the quality of the water supplies since the inauguration of the present system of inspection by the State Board of Health. Upon the suggestion of the Board, a number of cities which were maintaining potentially

dangerous supplies have improved same by abandonment of contaminated supplies, installation of filters and careful sanitary surveillance of water shed.

The following is a tabulated report of the source, average capacity and daily consumption of each public supply, and analyses of same.

Respectfully submitted,

FRANCIS L. PARKER, JR., M. D.
Chemist and Bacteriologist.

Financial Statement.

The following is a correct statement of the expenditures of the State Board of Health for the fiscal year 1911, showing to whom paid and for what purpose. All claims against the Board are itemized and rendered in duplicate, the original being attached to warrant of Comptroller-General and forwarded to his office for payment—the duplicate being filed in this office.

EXPENDITURES.

STATE BOARD OF HEALTH FUND.

March	2. Voucher No.	1.	To Geo. H. Huggins, Postmaster, stamps 1,000 2c, 500 1c.	\$ 25.00
